Latest AD0-E724 study materials

In order to pass the Adobe AD0-E724 Exam, selecting the appropriate training tools is very necessary. And the study materials of Adobe AD0-E724 exam is a very important part. Dumpcollection can provide valid materials to pass the Adobe AD0-E724 exam. The IT experts in Dumpcollection are all have strength aned experience. Their research materials are very similar with the real exam questions. Dumpcollection is a site that provide the exam materials to the people who want to take the exam. and we can help the candidates to pass the exam effectively.

Adobe Commerce Developer Professional Sample Questions (Q29-Q34):

NEW QUESTION # 29
A client would like to add an image icon in front of the telephone field to the shipping address form on a checkout page. What is the correct way to modify the UI component to set a custom template file for the field?

- A.

```
...
<item name="telephone" xsi:type="array">
<arguments name="config" xsi:type="array">
<item name="elementTmpl" xsi:type="string">%Vendor_Module%/form/element/%your_template%</item>
</arguments>
</item>
...
```

- B.

```
...
<item name="telephone" xsi:type="array">
<item name="config" xsi:type="array">
<item name="elementTmpl" xsi:type="string">%Vendor_Module%/form/element/%your_template%</item>
</item>
</item>
...
```

- C.

```
...
<block name="telephone" xsi:type="array">
<arguments name="config" xsi:type="array">
<item name="elementTmpl" xsi:type="string">%Vendor_Module%/form/element/%your_template%</item>
</arguments>
</block>
...
```

- D.

```
...
<block name="telephone" xsi:type="array">
<arguments name="config" xsi:type="array">
<item name="elementTmpl" xsi:type="string">%Vendor_Module%/form/element/%your_template%</item>
</arguments>
</block>
...
```

Answer: C

Explanation:
To add an image icon in front of the telephone field in the shipping address form on the checkout page, the correct way is to modify the UI component by setting a custom template file for the field. The snippet in option B is the correct one because it uses the<block>element and sets theelementTmplto the custom template path within theargumentsnode under theconfignode. This modification will instruct Magento to use the specified custom template file for rendering the telephone field, allowing for the addition of an image icon in front of it.

NEW QUESTION # 30
Which file should a developer use to set the default value when creating configuration fields for admin?

- A. etc/adminhtml/config.xml
- B. etc/adminhtml/system.xml
- C. etc/config xml

Answer: A

Explanation:
When creating configuration fields for the admin panel and setting their default values, a developer should use theetc/config.xmlfile within their module. This file is used to declare default values for the module's configuration options. When Magento is installed or

the module is enabled, these values are automatically loaded into the database, under thecore_config_datatable, setting the initial configuration for the module.

This approach ensures that the module has sensible defaults and operates correctly upon installation

NEW QUESTION # 31

Which command can be used to display a full list of enabled and disabled Magento modules?

- A. bin/magento modulestatus
- B. bin/magento module:show
- C. bin/magento module:all

Answer: A

Explanation:

The command to display a full list of enabled and disabled Magento modules isbin/magento module:status.

This command provides a comprehensive overview of all modules within the Magento instance, categorizing them into enabled and disabled modules. This information is crucial for debugging and development purposes, as it allows developers to quickly understand which components of Magento are active and which are not, facilitating troubleshooting and configuration adjustments.

NEW QUESTION # 32

During database migration in the Adobe Commerce Cloud integration environment, a developer experienced a disk space error causing the database import to fail.

How would the developer fix this issue?

- A. Change the database engine to PostgreSQL that has no disk space limit.
- B. Increase the disk space of the database service.
- C. Add a new database node and enable split database.

Answer: B

Explanation:

The developer can fix this issue by increasing the disk space of the database service. The database service is one of the services that run on the Adobe Commerce Cloud platform and provide functionality for the application. The database service uses MySQL as the database engine andstores data for products, customers, orders, etc. The disk space of the database service determines how much data can be stored and processed by the database. If the disk space is insufficient, the database import can fail with a disk space error. The developer can increase the disk space of the database service by modifying the .magento/services.yaml file and redeploying the environment. Verified References: [Magento 2.4 DevDocs]

NEW QUESTION # 33

An Adobe Commerce Developer is tasked with creating a custom form which submits its data to a frontend controller They have decided to create an action and have implemented the
\Magento\Framework\App\Action\HttpPostActioninterface class, but are not seeing the data being persisted in the database, and an error message is being shown on the frontend after submission.

After debugging and ensuring that the data persistence logic is correct, what may be cause and solution to this?

- A. Magento does not allow POST requests to a frontend controller, therefore, the submission functionality will need to be rewritten as an API endpoint.
- B. The developer forgot to implement a validatePostDataQ method in their action. They should implement this method: all non-validated POST data gets stripped out of the request and an error is thrown.
- C. Form key validation runs on all non-AJAX POST requests, the developer needs to add the for_key to their requests.

Answer: C

Explanation:

According to the Magento Stack Exchange answer, form key validation is a security feature that prevents CSRF attacks by checking if the form key in the request matches the one generated by Magento. If the developer does not include the form_key in their custom form, the validation will fail and an error will be shown. Therefore, the developer needs to add the form_key to their requests by using <?= $block-

>getBlockHtml ('formkey') ?> in their template file. Verified References:https://magento.stackexchange.com
/questions/95171/magento-2-form-validation

In Adobe Commerce, when handling POST requests from forms on the frontend, form key validation is enabled by default as a security measure to prevent Cross-Site Request Forgery (CSRF) attacks. This validation checks that the form submission is coming from the same origin by including a unique token (form key) in the request. If this form key is missing or incorrect, the request will fail, and an error message may be shown on the frontend.

In this scenario:

* Since the developer has used \Magento\Framework\App\Action\HttpPostActionInterface, which is appropriate for handling POST requests, it's likely that the error they encounter is due to missing form key validation.

* The solution is to ensure that the form includes a hidden input field for the form key. Adobe Commerce automatically adds this key in forms if you use the \Magento\Framework\Data\Form\FormKey model to get the form key value.

To implement this:

* Ensure the form includes the form key:

<input name="form_key" type="hidden" value="<?= $block->escapeHtml($block->getFormKey()) ?>" />

* The form key should also be included in the POST data sent to the controller. If it's missing, Adobe Commerce will not process the request.
