Our CloudSec-Pro exam questions are compiled by experts and approved by the professionals with years of experiences. The language is easy to be understood which makes any learners have no obstacles and our CloudSec-Pro guide torrent is suitable for anyone. The content is easy to be mastered and has simplified the important information. Our CloudSec-Pro test torrents convey more important information with less questions and answers and thus make the learning relaxing and efficient. With our CloudSec-Pro exam questions, your will pass the CloudSec-Pro exam with ease.

Palo Alto Networks CloudSec-Pro Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Cloud Posture Security: This domain examines the tools and practices used to assess and manage cloud security posture, spanning CSPM, KSPM, AI-SPM, and DSPM. It also covers agentless scanning, identity security, vulnerability management, unified compliance, and the role of Posture Security Management Modules.
Topic 2	<ul style="list-style-type: none">• Security Operations Center (SOC) Fundamentals: This domain covers the foundational components of a SOC, including team roles, tools, and technologies used in day-to-day security operations. It also addresses how AI• ML and threat intelligence support incident response, categorization, and prioritization.

Topic 3	<ul style="list-style-type: none"> • Cortex Fundamentals: This domain focuses on the core features of the Cortex Cloud platform, including indicator types, log management, asset inventory, compliance, and data protection. It also covers how to create reports and dashboards and how data sources are ingested into the platform.
Topic 4	<ul style="list-style-type: none"> • Cloud Runtime Security: This domain addresses the protection of cloud workloads during active operation, covering cloud workload protection, detection and response, web application and API security, and vulnerability management. It also includes the processes involved in deploying and managing security agents.
Topic 5	<ul style="list-style-type: none"> • Application Security: This domain covers security practices integrated throughout the software development lifecycle, including application security posture management, CI • CD pipeline security, software composition analysis, IaC security, and secrets scanning. It also explores real-world application security use cases and scan management.

Palo Alto Networks Cloud Security Professional Sample Questions (Q117-Q122):

NEW QUESTION # 117

Prisma Cloud supports sending audit event records to which three targets? (Choose three.)

- A. Syslog
- B. SNMP Traps
- C. Netflow
- D. Prometheus
- E. Stdout

Answer: A,D,E

NEW QUESTION # 118

What are two ways to scan container images in Jenkins pipelines? (Choose two.)

- A. twistcli
- B. Compute Jenkins plugin
- C. Compute Azure DevOps plugin
- D. Prisma Cloud Visual Studio Code plugin with Jenkins integration
- E. Jenkins Docker plugin

Answer: A,B

Explanation:

To scan container images in Jenkins pipelines, two effective methods are using twistcli and the Compute Jenkins plugin. twistcli is a command-line tool provided by Prisma Cloud that allows for the scanning of container images for vulnerabilities and compliance issues directly from the CI/CD pipeline. It can be integrated into Jenkins jobs as a build or post-build step to automatically scan images as part of the build process.

The Compute Jenkins plugin is specifically designed for integration with Jenkins, providing a more seamless and automated way to

include Prisma Cloud's security scanning capabilities within Jenkins pipelines. This plugin enables Jenkins to trigger image scans with Prisma Cloud directly and can fail builds based on scan results, ensuring that only secure and compliant images are pushed through the CI/CD pipeline.

Both twistcli and the Compute Jenkins plugin are designed to integrate Prisma Cloud's security capabilities into the CI/CD process, enabling DevOps teams to identify and fix security issues early in the development lifecycle.

NEW QUESTION # 119

Which policy type should be used to detect and alert on cryptominer network activity?

- A. Config-run
- B. Config-build
- C. Anomaly
- D. Audit event

Answer: C

Explanation:

To detect and alert on cryptominer network activity, the policy type that should be used is an Anomaly policy.

Anomaly policies in Prisma Cloud are designed to identify unusual and potentially malicious activities, including the network patterns typical of cryptomining operations. These policies leverage behavioral analytics to spot deviations from normal operations, making Option B the correct answer.

Suspicious network actors-Exposes suspicious connections by inspecting the network traffic to and from your cloud environment and correlating it with AutoFocus, Palo Alto Networks threat intelligence feed.

AutoFocus identifies IP addresses involved in suspicious or malicious activity and classifies them into one of eighteen categories.

Some examples of the categories are Backdoor, Botnet, Cryptominer, DDoS, Ransomware, Rootkit, and Worm. There are thirty-six policies, two for each of the eighteen categories- internal and external. <https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin/prisma-cloud-policies/anomaly-policies>

NEW QUESTION # 120

Which type of RQL query should be run to determine if AWS Elastic Compute Cloud (EC2) instances without encryption was enabled?

- A. CONFIG
- B. NETWORK
- C. EVENT
- D. SECURITY

Answer: A

Explanation:

To determine if AWS EC2 instances are running without encryption enabled, the appropriate RQL (Resource Query Language) type to use is CONFIG. CONFIG queries in Prisma Cloud are designed to inspect the configuration states of cloud resources and identify compliance with best practices or specific security requirements. By running a CONFIG query, administrators can assess the configuration settings of EC2 instances, including whether encryption features are enabled or not. This type of query allows for deep inspection of resource configurations within cloud environments, making it the ideal choice for identifying unencrypted EC2 instances and thereby helping to ensure data protection and compliance with security policies.

NEW QUESTION # 121

The security team wants to target a CNAF policy for specific running Containers. How should the administrator scope the policy to target the Containers?

- A. scope the policy to namespaces.
- B. scope the policy to Defender names.
- C. scope the policy to Image names.
- D. scope the policy to Host names.

Answer: C

Explanation:

To specifically target running containers with a Cloud Native Application Framework (CNAF) policy in Prisma Cloud, the administrator should scope the policy to Image names. By doing so, the policy will apply to containers based on the images they were created from, allowing for precise targeting of security policies to specific containers. This approach is part of Prisma Cloud's capabilities to provide granular security controls for containerized environments, ensuring that policies are effectively applied to the relevant containers.
