

Valid Dumps CIS-PA Ppt - Practice CIS-PA Test Online

What's more, part of that VCE4Plus CIS-PA dumps now are free: <https://drive.google.com/open?id=12IPFhhHRP6pAgnhjr3u6mB3TUZDflxHe>

One year free update for CIS-PA pdf torrent is available, and you do not worry about missing the updated ServiceNow CIS-PA study dumps. In addition, the content of CIS-PA pdf download cover almost the key points which will be occurred in the actual test. Besides, you can install your CIS-PA Online Test engine on any electronic device, so that you can study at anytime and anywhere. Thus your time is saved and your study efficiency is improved. Our CIS-PA CIS-PA can ensure you 100% pass.

ServiceNow CIS-PA Exam Syllabus Topics:

Section	Objectives
Topic 1: Administration and Implementation	- System configuration • 1. Troubleshooting data and reporting issues • 2. Performance Analytics setup and maintenance
	- Security and access control • 1. Roles and permissions for PA data
	- Key concepts of Performance Analytics
Topic 2: Performance Analytics Fundamentals	• 1. Time series data and scoring concepts • 2. Indicators and data collection basics

- Indicator configuration
 - 1. Breakdowns and breakdown sources
 - 2. Indicator formulas and definitions

Topic 3: Indicators and Data Sources

- Data collection setup
 - 1. Scheduled jobs and data refresh
 - 2. Aggregation and data collection jobs

- Target setting and tracking

Topic 4: Goals and Thresholds

- 1. Goal definitions for indicators
- 2. Thresholds and scoring rules

- Performance Analytics dashboards

Topic 5: Dashboards and Widgets

- 1. Widget configuration and usage
- 2. Dashboard design principles

Practice CIS-PA Test Online, Valid CIS-PA Exam Camp

Our CIS-PA test prep is renowned for free renewal in the whole year. As you have experienced various kinds of exams, you must have realized that renewal is invaluable to CIS-PA study materials, especially to such important CIS-PA exams. And there is no doubt that being acquainted with the latest trend of exams will, to a considerable extent, act as a driving force for you to pass the exams and realize your dream of living a totally different life. So if you do want to achieve your dream, buy our CIS-PA practice materials.

ServiceNow Certified Implementation Specialist - Platform Analytics Sample Questions (Q54-Q59):

NEW QUESTION # 54

When using a Bucket Group as a Breakdown Source, which is the required Breakdown Source Facts table?

- A. The Indicator Facts table
- B. Bucket [pa_buckets]
- C. Bucket Group [pa_bucket_groups]
- D. Choice [sys_choice]

Answer: B

Explanation:

When a Bucket Group is used as a Breakdown Source in Platform Analytics, the required Facts table is Bucket [pa_buckets]. Bucket Groups define how numeric or duration values (such as age, time, or cost ranges) are grouped, but they do not store analytics facts themselves. The actual bucketed values generated during data collection are stored in the pa_buckets table, which makes it the authoritative facts table for bucket-based breakdowns.

The pa_bucket_group table only stores configuration metadata for bucket definitions. The sys_choice table is used exclusively for choice list values and is unrelated to bucket analytics. The Indicator Facts table stores indicator scores but does not contain bucket-level breakdown data. ServiceNow documentation explicitly states that any breakdown based on bucket groups must reference the pa_buckets table to ensure accurate historical analysis and proper breakdown rendering. Therefore, option C is the only correct answer.

NEW QUESTION # 55

What should the target for the Index and its supporting indicators be set to when creating an Index Indicator?

- A. 100% and Maximize

- B. 0% and Maximize
- C. 100% and Minimize
- D. 0% and Minimize

Answer: A

Explanation:

An Index Indicator in Platform Analytics represents a composite score calculated from multiple supporting indicators. According to ServiceNow best practices, both the Index and its supporting indicators should be normalized so that higher values represent better performance. Therefore, the correct configuration is a target of 100% with a Maximized direction.

This standardization ensures consistent weighting and scoring logic across all contributing indicators. If supporting indicators were set to Minimize or had inconsistent targets, the index calculation would produce misleading or inverted results. Options involving a 0% target are incorrect because index scores are designed to trend toward full achievement, represented as 100%. ServiceNow documentation clearly states that index indicators assume maximization logic for proper normalization and aggregation, making option D the correct and documented choice.

NEW QUESTION # 56

Breakdown element security is configured in the properties of which object?

- A. Manual Breakdown
- B. Breakdown Source
- C. Automated Indicator
- **D. Automated Breakdown**

Answer: D

Explanation:

Breakdown element security determines which users are allowed to see specific breakdown elements (such as certain categories or values) when viewing analytics data. In Platform Analytics, this security is configured directly on the Automated Breakdown record. Automated Breakdowns include properties that allow administrators to define element-level access control, typically by specifying roles that are required to view certain breakdown elements. This ensures sensitive analytics data is only visible to authorized users. The Breakdown Source defines how data is mapped and categorized but does not control visibility. Automated Indicators control score collection and aggregation, not breakdown element security. Manual Breakdowns are static and do not support dynamic element security in the same way.

ServiceNow documentation explicitly states that breakdown element security settings—such as restricting elements by role—are part of the Automated Breakdown configuration, making option D the correct answer.

NEW QUESTION # 57

Which Breakdown should be excluded from the Historical Data Collection job configured for the indicator Number of open and overdue incidents?

- A. Location
- B. Category
- **C. Age**
- D. State

Answer: C

Explanation:

Historical Data Collection is intended to accurately reconstruct past indicator scores. Age-based breakdowns must be excluded because age is a time-relative value that cannot be reliably recalculated for historical points in time.

For the indicator Number of open and overdue incidents, breakdowns such as Location, Category, and State can be historically recalculated by evaluating record attributes at specific points in time. However, Age depends on the exact moment of evaluation and changes continuously, making it unsuitable for historical backfilling.

ServiceNow documentation explicitly warns against using age or duration-based breakdowns in historical data collection jobs, as they lead to inaccurate or misleading results. Therefore, option A is the correct and documented exclusion.

NEW QUESTION # 58

Which configuration confirms that an Automated Breakdown is using a Bucket Group?

- A. The Facts table of the Breakdown Source is set to [pa_buckets]
- B. The Default elements filter of the Breakdown specifies the Bucket Groups
- C. The Related list conditions of the Breakdown Source identify the Bucket Groups
- D. The Facts table of the Breakdown is set to [pa_buckets]

Answer: A

Explanation:

An Automated Breakdown is confirmed to be using a Bucket Group when the Facts table of the Breakdown Source is set to Bucket [pa_buckets]. Bucket Groups define how numeric or duration values are grouped, but the actual bucketed analytics data is stored in the pa_bucketstable during data collection.

The Breakdown Source is responsible for defining where the breakdown facts originate. If its Facts table is pa_buckets, this indicates that the breakdown is based on bucketed values generated by a Bucket Group. The Breakdown record itself does not define the facts table, and default element filters or related list conditions do not establish the use of bucket data.

ServiceNow Platform Analytics documentation clearly states that all bucket-based breakdowns must reference pa_buckets at the Breakdown Source level, making option C the correct and definitive answer.

NEW QUESTION # 59

.....

We are stable and Reliable CIS-PA Exam Questions providers for persons who need them for their exam. We have been staying and growing in the market for a long time, and we will be here all the time, because our excellent quality and high pass rate. As for the safe environment and effective product, there are thousands of candidates are willing to choose our Certified Implementation Specialist - Platform Analytics study question, why don't you have a try for our study materials, never let you down!
