As the employment situation becoming more and more rigorous, it's necessary for people to acquire more D-PVM-OE-01 skills and knowledge when they are looking for a job. Enterprises and institutions often raise high acquirement for massive candidates, and aim to get the best quality talents. Thus a high-quality D-PVM-OE-01 Certification will be an outstanding advantage, especially for the employees, which may double your salary, get you a promotion. So choose us, choose a brighter future.

When dealing with any kind of exams, the most important thing is to find a scientific way to review effectively. Our D-PVM-OE-01 practice materials compiled by the most professional experts. Till now, we have over tens of thousands of customers around the world supporting our D-PVM-OE-01 exam torrent. If you are unfamiliar with our D-PVM-OE-01 Study Materials, please download the free demos for your reference. To some unlearned exam candidates, you can master necessities by our D-PVM-OE-01 practice materials quickly So our materials are elemental materials you cannot miss.

Simulation D-PVM-OE-01 Questions & D-PVM-OE-01 Valid Exam Tutorial

Dreaming to be a certified professional in this line? Our D-PVM-OE-01 study materials are befitting choices. We made real test materials in three accessible formats for your inclinations. (PDF, APP, software). Our website is an excellent platform, which provides the questions of these versions of our D-PVM-OE-01 Exam Questions compiled by experts. By browsing this website, all there versions of our D-PVM-OE-01 pratice engine can be chosen according to your taste or preference.

EMC D-PVM-OE-01 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Unisphere for PowerMax 10 Implementation and Administration: This section of the exam measures the skills of System Administrators and covers the implementation and management of Unisphere for PowerMax. Candidates must understand the installation process, post-installation tasks, and interface navigation to efficiently operate the platform. One key skill evaluated is setting up Unisphere for PowerMax.
Topic 2	<ul style="list-style-type: none"> • PowerMax Family Storage Provisioning: This section of the exam measures the skills of Storage Administrators and covers the architecture, configurations, and management of the PowerMax family. Candidates must understand system models, port and device management, and provisioning methods using Unisphere for PowerMax. They are expected to perform service level-based provisioning and allocate storage through auto-provisioning groups. One key skill assessed is configuring storage using Unisphere for PowerMax.
Topic 3	<ul style="list-style-type: none"> • PowerMax Family Business Continuity Administration: This section of the exam measures the skills of Disaster Recovery Engineers and focuses on replication technologies used for business continuity. Candidates must perform SnapVX and Clone operations using Unisphere for PowerMax and understand Symmetrix Remote Data Facility (SRDF) replication. They must also execute SRDF operations using Unisphere and SYMCLI.
Topic 4	<ul style="list-style-type: none"> • PowerMax Family Local and Remote Replication Concepts: This section of the exam measures the skills of Backup and Recovery Specialists and covers the features and functionalities of TimeFinder SnapVX. Candidates must differentiate between SnapVX snapshots and clones while understanding their role in data protection. One key skill assessed is comparing the use cases of snapshots and clones.
Topic 5	<ul style="list-style-type: none"> • PowerMax Family Management in a Virtual Environment: This section of the exam measures the skills of Virtualization Engineers and evaluates the integration of PowerMax storage in virtualized environments. Candidates must understand VMware vSphere, the functionalities of Virtual Storage Integrator (VSI), and how to monitor virtualized workloads using Unisphere for PowerMax. One critical skill assessed is tracking virtual machine storage performance.
Topic 6	<ul style="list-style-type: none"> • PowerMax Family Monitoring and Workload Planning: This section of the exam measures the skills of Performance Analysts and focuses on monitoring storage environments and workload planning using Unisphere for PowerMax. Candidates must understand how to track performance metrics, detect issues, and optimize workloads to enhance storage efficiency. One key skill tested is monitoring storage health through Unisphere.

EMC Dell Technologies PowerMax Operate Sample Questions (Q74-Q79):

NEW QUESTION # 74

What takes place during an SRDF Restore operation?

- A. Changes made to the R2 are propagated to the R1. Changes made to the R1 are discarded
- B. Changes made to the R1 are propagated to the R2. Changes made to the R2 are discarded
- C. Enables access to both the R1 and R2 devices for their hosts
- D. Resumes normal SRDF mirroring and host access

Answer: B

Explanation:

Step by Step Comprehensive Detailed Explanation:

In SRDF (Symmetrix Remote Data Facility), a "Restore" operation is used to resynchronize the source (R1) and target (R2) devices after a situation where the target device might have been modified independently.

This typically occurs after a failover scenario where the target device becomes the primary and undergoes changes.

During an SRDF Restore operation:

* R2 Changes Discarded: Any changes made to the target (R2) device since the last synchronization are discarded.

* R1 Changes Propagated: The current data on the source (R1) device is copied over to the target (R2), overwriting any existing data on the target.

This effectively restores the target device to a state consistent with the source device, ensuring data integrity and consistency.

Why other options are incorrect:

- * B. Resumes normal SRDF mirroring and host access: While a Restore operation can be part of the failback process, it's not the only step involved. Failback might involve additional actions like reversing replication direction and restoring host access.
 - * C. Changes made to the R2 are propagated to the R1. Changes made to the R1 are discarded: This describes an "Update" operation, not a "Restore."
 - * D. Enables access to both the R1 and R2 devices for their hosts: This describes a "Split" operation, where both devices are made accessible independently.

NEW QUESTION # 75

Which Unisphere for PowerMax client connection authentication type is irrevocable once it is selected?

- A. Multi-factor Authentication
- B. x.509 Common/Principal Name
- C. Windows AD Domain-based
- D. LDAP - SSL

Answer: B

NEW QUESTION # 76

How does Solutions Enabler use Gatekeepers to pass commands to the PowerMax array?

- A. Obtains the Gatekeeper and unlocks the device Processes the system commands and locks the device.
- B. Automatically creates the Gatekeeper and locks the device Processes the system commands; unlocks and deletes the Gatekeeper.
- C. Automatically creates the Gatekeeper and unlocks the device. Processes the system commands; locks and deletes the Gatekeeper
- D. Obtains the Gatekeeper and locks the device. Processes the system commands and unlocks the device

Answer: D

NEW QUESTION # 77

Place the steps to create a snapshot in Unisphere for PowerMax in the correct order

1. In the **Protect Wizard**, if not already selected, select **Create a Snapshot using SnapVX** from the **Select Technology** tab and click **Next**.

2. Verify the selections in the summary page, and click **Run Now** or **Add to Job List**.

3. In the **Configure SnapVX** page, select whether to create a snapshot or reuse an existing snapshot along with the expiry type.

4. Click **Advanced Options** to see the advanced options and **Enable Secure Snaps**.

5. Select a PowerMax storage system from the navigation pane **Storage > Storage Groups**.

6. Select a Storage Group and click **Protect**.

Answer:

Explanation:

steps

In the **Protect Wizard**, if not already selected, select **Create a Snapshot using SnapVX** from the **Select Technology** tab and click **Next**.

Verify the selections in the summary page, and click **Run Now** or **Add to Job List**.

In the **Configure SnapVX** page, select whether to create a snapshot or reuse an existing snapshot along with the expiry type.

Click **Advanced Options** to see the advanced options and **Enable Secure Snaps**.

Select a PowerMax storage system from the navigation pane **Storage > Storage Groups**.

Select a Storage Group and click **Protect**.

Correct Order

Select a PowerMax storage system from the navigation pane **Storage > Storage Groups**.

Select a Storage Group and click **Protect**.

In the **Protect Wizard**, if not already selected, select **Create a Snapshot using SnapVX** from the **Select Technology** tab and click **Next**.

In the **Configure SnapVX** page, select whether to create a snapshot or reuse an existing snapshot along with the expiry type.

Click **Advanced Options** to see the advanced options and **Enable Secure Snaps**.

Verify the selections in the summary page, and click **Run Now** or **Add to Job List**.

Explanation:

Okay, I'm ready to arrange those steps for creating a snapshot in Unisphere for PowerMax in the correct order, based on the image provided.

Here is the correct sequence, along with explanations:

Correct Order:

- * Select a PowerMax storage system from the navigation pane Storage > Storage Groups.
- * Why: This is the starting point in Unisphere. You need to navigate to the "Storage Groups" section within the specific PowerMax array where you intend to create the snapshot.
- * Select a Storage Group and click Protect.
- * Why: You're choosing the storage group that contains the data you want to snapshot. Clicking "Protect" initiates the process of creating a data protection operation (in this case, a snapshot).
- * In the Protect Wizard, if not already selected, select Create a Snapshot using SnapVX from the Select Technology tab and click Next.
- * Why: This specifies that you want to use the SnapVX technology to create a snapshot. SnapVX is the snapshot feature in PowerMax arrays.
- * In the Configure SnapVX page, select whether to create a snapshot or reuse an existing snapshot along with the expiry type.
- * Why: Here, you define the core parameters of the snapshot:
- * Create a new snapshot: This is what you'd typically do for a new point-in-time copy.
- * Reuse an existing snapshot: In some cases, you might want to update an existing snapshot.
- * Expiry type: This determines how long the snapshot will be retained (e.g., a specific duration or until manually deleted).
- * Click Advanced Options to see the advanced options and Enable Secure Snaps.
- * Why: This allows you to configure more granular settings for the snapshot, including:
- * Secure Snaps: Enabling this option prevents the snapshot from being deleted before its expiry time, adding an extra layer of protection.
- * Verify the selections in the summary page, and click Run Now or Add to Job List.
- * Why: This is the final step before creating the snapshot:
- * Summary page: Review all the settings you've configured.
- * Run Now: Immediately creates the snapshot.
- * Add to Job List: Schedules the snapshot creation for later.
- * Select a PowerMax storage system from the navigation pane Storage > Storage Groups.
- * Select a Storage Group and click Protect.
- * In the Protect Wizard, if not already selected, select Create a Snapshot using SnapVX from the Select Technology tab and click Next.
- * In the Configure SnapVX page, select whether to create a snapshot or reuse an existing snapshot along with the expiry type.
- * Click Advanced Options to see the advanced options and Enable Secure Snaps.
- * Verify the selections in the summary page, and click Run Now or Add to Job List.

NEW QUESTION # 78

Refer to the exhibit.

What is the topology shown?

- A. SRDF/Metro
- B. Concurrent SRDF
- **C. Cascaded SRDF**
- D. SRDF/Star

Answer: C

Explanation:

Step by Step Comprehensive Detailed Explanation:

The topology shown in the exhibit depicts Cascaded SRDF. This SRDF configuration involves three storage arrays (or sites) connected in a chained or cascaded manner.

Here's how it works:

- * Primary Site (R1): The production host is connected to the primary storage array (R1).
- * Intermediate Site (R2): The primary array (R1) synchronously replicates data to an intermediate array (R2).
- * Remote Site (R2): The intermediate array (R2) then asynchronously replicates data to a remote array (also labeled R2 in the diagram).

This cascading setup provides a multi-hop disaster recovery solution, where data is first replicated synchronously to a nearby site for high availability and then asynchronously replicated to a further remote site for disaster recovery.

Why other options are incorrect:

- * B. SRDF/Star: SRDF/Star involves a central array replicating to multiple remote arrays in a star-like pattern.
- * C. SRDF/Metro: SRDF/Metro is designed for synchronous replication over short distances, typically within a metropolitan area.
- * D. Concurrent SRDF: Concurrent SRDF allows multiple SRDF relationships to exist simultaneously for the same device.

NEW QUESTION # 79

.....

Of course, when we review a qualifying exam, we can't be closed-door. We should pay attention to the new policies and information related to the test D-PVM-OE-01 certification. For the convenience of the users, the D-PVM-OE-01 test materials will be updated

on the homepage and timely update the information related to the qualification examination. Annual qualification examination, although content broadly may be the same, but as the policy of each year, the corresponding examination pattern grading standards and hot spots will be changed, the D-PVM-OE-01 Test Prep can help users to spend the least time to pass the exam.
