## ISC Certified in Cybersecurity (CC) Sample Questions (Q222-Q227):

### NEW QUESTION # 222

Which aspect of cybersecurity is MOST impacted by Distributed Denial of Service (DDoS) attacks?

- A. Availability
- B. Integrity

- C. Non-repudiation
- D. Confidentiality

**Answer: A**

#### NEW QUESTION # 223

Which prevents threats?

- **A. Antivirus**
- B. SIEM
- C. IDS
- D. HIDS

**Answer: A**

Explanation:

Antivirus software is a preventive security control designed to stop known malware threats before they can execute or spread within a system. Antivirus solutions use signature-based detection, heuristic analysis, and increasingly behavior-based techniques to block malicious code such as viruses, worms, trojans, and ransomware.

In contrast, IDS (Intrusion Detection Systems) and HIDS (Host-based IDS) are primarily detective controls.

They monitor systems and networks for suspicious activity but do not inherently block threats. SIEM platforms aggregate and analyze logs for visibility and correlation; they support detection and response but do not directly prevent threats.

According to NIST SP 800-53, preventive controls are designed to stop incidents from occurring, while detective controls identify events after or during occurrence. Therefore, antivirus is the correct choice as it directly prevents threats.

#### NEW QUESTION # 224

What is the main objective of DRP after a breach shuts down systems?

- A. Prosecution
- B. Employee safety
- **C. Restore systems**
- D. Relocation

**Answer: C**

Explanation:

The primary objective of DRP is restoring IT systems to a reliable operational state.

#### NEW QUESTION # 225
