Most people define JN0-351 study tool as regular books and imagine that the more you buy, the higher your grade may be. It is true this kind of view make sense to some extent. However, our JN0-351 real questions are high efficient priced with reasonable amount, acceptable to exam candidates around the world. Our JN0-351 practice materials comprise of a number of academic questions for your practice, which are interlinked and helpful for your exam. Unlike those untenable practice materials in the market, our JN0-351 practice materials are highly utilitarian for their accuracy of the real exam because all content are compiled by proficient experts who engaged in this area more than ten years. It is our unswerving will to help you pass the exam by JN0-351 study tool smoothly.

One Juniper certification will help you get highly favor of large enterprises, it will bring you better opportunities. JN0-351 valid exam dumps PDF will be a stepping-stone for you to success. The most important method for passing exams is targeted learning and preparing. Programmatic learning may make you know professional knowledge better. But it will not only cost a lot of your time and energy but also can't guarantee you pass. Our JN0-351 Valid Exam Dumps PDF can help you pass exam for sure.

## JN0-351 Best Vce & Exam JN0-351 Sample

BootcampPDF online digital Juniper JN0-351 exam questions are the best way to prepare. Using our Juniper JN0-351 exam dumps, you will not have to worry about whatever topics you need to master. To practice for a Juniper JN0-351 Certification Exam in the software (free test), you should perform a self-assessment.

## Juniper Enterprise Routing and Switching, Specialist (JNCIS-ENT) Sample Questions (Q13-Q18):

### NEW QUESTION # 13

Which three statements are correct about OSPF packet types? (Choose three.)

- A. Link-state request packets are sent after receiving an LSA header not in the OSPF database.
- B. Database description packets are used during the adjacency formation process.

- C. Link-state acknowledgment packets are sent every 30 seconds.
- **D. Link-state update packets contain one or more LSAs.**
- E. Hello packets are sent every 30 seconds by default.

**Answer: A,B,D**

#### NEW QUESTION # 14

You must implement filter-based forwarding. You need to direct traffic from the 192.168.1.0/24 through vr1 and traffic from 10.210.0.128/26 through vr2.

Which configuration is correct in this scenario?

- **A.**
- B.
- C.
- D.

**Answer: A**

#### NEW QUESTION # 15

Exhibit.

Which router will become the OSPF BDR if all routers are powered on at the same time?

- A. R3
- B. R1
- **C. R4**
- D. R2

**Answer: C**

Explanation:

Explanation

OSPF DR/BDR election is a process that occurs on multi-access data links. It is intended to select two OSPF nodes: one to be acting as the Designated Router (DR), and another to be acting as the Backup Designated Router (BDR). The DR and BDR are responsible for generating network LSAs for the multi-access network and synchronizing the LSDB with other routers on the same network<sup>1</sup>.

The DR/BDR election is based on two criteria: the OSPF priority and the router ID. The OSPF priority is a value between 0 and 255 that can be configured on each interface participating in OSPF. The default priority is

1. A priority of 0 means that the router will not participate in the election and will never become a DR or BDR. The router with the highest priority will become the DR, and the router with the second highest priority will become the BDR. If there is a tie in priority, then the router ID is used as a tie-breaker. The router ID is a

32-bit number that uniquely identifies each router in an OSPF domain. It can be manually configured or automatically derived from the highest IP address on a loopback interface or any active interface<sup>2</sup>.

In this scenario, all routers have the same priority of 1, so the router ID will determine the outcome of the election. The router IDs are shown in the exhibit as RID values. The highest RID belongs to R4 (10.10.10.4), so R4 will become the DR. The second highest RID belongs to R3 (10.10.10.3), so R3 will become the BDR.

#### NEW QUESTION # 16

What is the management IP address of the device shown in the exhibit?

- A. 172.23.11.10
- B. 128.0.0.1
- C. 172.23.12.100
- **D. 10.210.20.233**

**Answer: D**

Explanation:

The management IP address of the device shown in the exhibit is indicated by the interface "me0." In the provided output, the "me0" interface is listed with the IP address 10.210.20.233.

#### NEW QUESTION # 17

What are two characteristics of RSTP alternate ports? (Choose two.)

- A. RSTP alternate ports provide an alternate lower cost path to the root bridge.
- B. RSTP alternate ports are active ports used to forward frames toward the root bridge.
- C. RSTP alternate ports provide an alternate higher cost path to the root bridge.
- D. RSTP alternate ports block traffic while receiving superior BPDUs from a neighboring switch.

**Answer: C,D**

Explanation:

A is correct because RSTP alternate ports block traffic while receiving superior BPDUs from a neighboring switch. An alternate port is a backup port for a root port, which means it receives better BPDUs from another bridge than the current root port<sup>1</sup>. However, an alternate port does not forward any traffic, as it is in a discarding state<sup>2</sup>. It only listens to BPDUs and waits for the root port to fail. If the root port fails, the alternate port can immediately transition to a forwarding state and become the new root port<sup>1</sup>.

C is correct because RSTP alternate ports provide an alternate higher cost path to the root bridge. An alternate port is selected based on the same criteria as the root port, which are the lowest bridge ID, the lowest path cost, the lowest sender port ID, and the lowest receiver port ID<sup>3</sup>. However, an alternate port receives a higher cost BPDU than the root port, otherwise it would be the root port itself<sup>1</sup>. Therefore, an alternate port provides an alternate higher cost path to the root bridge than the root port.

#### NEW QUESTION # 18

.....

You may feel astonished and doubtful about this figure; but we do make our JN0-351 exam dumps well received by most customers. Better still, the 98-99% pass rate has helped most of the candidates get the certification successfully, which is far beyond that of others in this field. In recent years, supported by our professional expert team, our JN0-351 Test Braindumps have grown up and have made huge progress. We pay emphasis on variety of situations and adopt corresponding methods to deal with. More successful cases of passing the JN0-351 exam can be found and can prove our powerful strength.
