CLF-C02 Reliable Study Materials | Certification CLF-C02 Test Questions

Our CLF-C02 exam questions are unlike other study materials that are available on the market, CLF-C02 guide quiz specially proposed different versions to allow you to learn not only on paper, but also to use mobile phones to learn. And if you buy the value pack, you have all of the three versions, the price is quite preferential and you can enjoy all of the study experiences. This means you can CLF-C02 Practice Engine anytime and anyplace for the convenience these three versions bring.

Amazon CLF-C02 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Billing, Pricing, and Support: This section contrasts pricing methods and budgeting resources management. It also tests understanding of billing methods, identifying support options, and technical resources.
Topic 2	<ul style="list-style-type: none">• Security and Compliance: This section involves understanding the shared responsibility framework of AWS in addition to compliance and governance. It also involves exploring the management capabilities of AWS by exploring its security capabilities.
Topic 3	<ul style="list-style-type: none">• Cloud Technology and Services: Describe ways to access AWS services in AWS Cloud and explore connectivity options. It deals with defining the global infrastructure of AWS, computing services, and network services.

Topic 4

- Cloud Concepts: This section involves knowledge of value proposition and exploring design rules of AWS. It covers the advantages of techniques for moving over to AWS cloud and developing a good understanding of cloud economics.

Amazon AWS Certified Cloud Practitioner Sample Questions (Q705-Q710):

NEW QUESTION # 705

A company needs a graph database service that is scalable and highly available. Which AWS service meets these requirements?

- A. Amazon Aurora
- B. Amazon DynamoDB
- C. Amazon Neptune
- D. Amazon Redshift

Answer: C

Explanation:

The AWS service that meets the requirements of providing a graph database service that is scalable and highly available is Amazon Neptune. Amazon Neptune is a fast, reliable, and fully managed graph database service that supports property graph and RDF graph models. Amazon Neptune is designed to store billions of relationships and query the graph with milliseconds latency. Amazon Neptune also offers high availability and durability by replicating six copies of the data across three Availability Zones and continuously backing up the data to Amazon S3. Amazon Aurora, Amazon Redshift, and Amazon DynamoDB are other AWS services that provide relational or non-relational database solutions, but they do not support graph database models.

NEW QUESTION # 706

A company wants to store its files in the AWS Cloud. Users need to be able to download these files directly using a public URL. Which AWS service or feature will meet this requirement?

- A. Amazon Elastic Block Store (Amazon EBS)
- B. Amazon S3
- C. Amazon Elastic File System (Amazon EFS)
- D. Amazon Redshift

Answer: B

NEW QUESTION # 707

Which task is the responsibility of the customer, according to the AWS shared responsibility model?

- A. Use AWS Identity and Access Management (IAM) according to the principle of least privilege.
- B. Secure Amazon CloudFront edge locations by allowing physical access according to the principle of least privilege.
- C. Patch the Amazon DynamoDB operating system.
- D. Protect the hardware that runs AWS services.

Answer: A

Explanation:

According to the AWS Shared Responsibility Model, AWS is responsible for the security "of" the cloud (such as protecting the infrastructure, including hardware, software, networking, and facilities that run AWS Cloud services). In contrast, customers are responsible for security "in" the cloud. This includes configuring and using AWS services securely.

D: Use AWS Identity and Access Management (IAM) according to the principle of least privilege is a customer's responsibility. Customers must manage their credentials, control access to resources, and ensure that IAM policies follow the principle of least privilege, which means granting only the permissions necessary to perform a task.

Why other options are not suitable:

* A. Patch the Amazon DynamoDB operating system: AWS is responsible for managing and patching the infrastructure for managed services like DynamoDB.

* B. Secure Amazon CloudFront edge locations by allowing physical access according to the principle of least privilege: AWS

handles physical security of its edge locations.

* C. Protect the hardware that runs AWS services: AWS is responsible for protecting the physical hardware that runs AWS services.

NEW QUESTION # 708

A company is planning to migrate applications to the AWS Cloud. During a system audit, the company finds that its content management system (CMS) application is incompatible with cloud environments.

Which migration strategies will help the company to migrate the CMS application with the LEAST effort? (Select TWO.)

- A. Retire
- B. Refactor
- C. Rehost
- D. Replatform
- E. Repurchase

Answer: C,E

Explanation:

Rehosting ("lift and shift") is a migration strategy where applications are moved to the cloud with minimal changes, making it the least effort-intensive method for applications incompatible with the cloud.

Repurchasing involves moving to a different product, often a SaaS solution, which can also minimize migration effort by avoiding the need for application-level changes. Retiring, replatforming, and refactoring require significant effort either in terms of analyzing and shutting down the application, making changes to the underlying platform, or redesigning the application architecture, respectively.

NEW QUESTION # 709

Which of the following acts as an instance-level firewall to control inbound and outbound access?

- A. AWS Trusted Advisor
- B. Virtual private gateways
- C. Security groups
- D. Network access control list

Answer: C

Explanation:

The correct answer is B because security groups are AWS features that act as instance-level firewalls to control inbound and outbound access. Security groups are virtual firewalls that can be attached to one or more Amazon EC2 instances. Users can configure rules for security groups to allow or deny traffic based on protocols, ports, and source or destination IP addresses. The other options are incorrect because they are not AWS features that act as instance-level firewalls to control inbound and outbound access. Network access control list is an AWS feature that acts as a subnet-level firewall to control inbound and outbound access. AWS Trusted Advisor is an AWS service that provides real-time guidance to help users follow AWS best practices for security, performance, cost optimization, and fault tolerance. Virtual private gateways are AWS features that enable users to create a secure and encrypted connection between their VPC and their on-premises network. Reference: Security Groups for Your VPC

NEW QUESTION # 710

.....

Before purchasing our CLF-C02 practice guide, we will offer you a part of questions as free demo for downloading so that you can know our CLF-C02 exam question style and PDF format deeper then you will feel relieved to purchase certification CLF-C02 study guide. We try our best to improve ourselves to satisfy all customers' demands. If you have any doubt or hesitate, please feel free to contact us about your issues. If you have doubt about our CLF-C02 Exam Preparation questions the demo will prove that our product is helpful and high-quality.
