Salesforce Data-Architect認證指南 & Data-Architect認證題庫

上帝是很公平的，每個人都是不完美的。就好比，平時不努力，老大徒傷悲。現在的IT行業競爭壓力不言而喻大家都知道，每個人都想通過IT認證來提升自身的價值，我也是，可是這種對我們來說是太難太難了，所學的專業知識早就忘了，惡補那是不現實的，還好我在互聯網上看到了Testpdf Salesforce的Data-Architect考試培訓資料，有了它我就不用擔心我得考試了，Testpdf Salesforce的Data-Architect考試培訓資料真的很好，它的內容覆蓋面廣，而且針對性強，絕對比我自己復習去準備考試好，如果你也是IT行業中的一員，那就趕緊將Testpdf Salesforce的Data-Architect考試培訓資料加入購物車吧，不要猶豫，不要徘徊，Testpdf Salesforce的Data-Architect考試培訓資料絕對是成功最好的伴侶。

最新的 Salesforce Application Architect Data-Architect 免費考試真題 (Q34-Q39):

問題 #34

A company wants to document the data architecture of a Salesforce organization.
What are two valid metadata types that should be included? (Choose two.)

- A. CustomField
- B. SecuritySettings
- C. Document
- D. RecordType

答案: A,D

解題說明：

Option A is correct because RecordType is a valid metadata type that should be included in documenting the data architecture of a Salesforce organization¹. RecordType defines different business processes, picklist values, and page layouts for different users². Option C is correct because CustomField is another valid metadata type that should be included in documenting the data architecture of a Salesforce organization¹. CustomField defines custom attributes for standard or custom objects³. Option B is not correct because Document is not a valid metadata type, but a standard object that stores documents in folders⁴. Option D is not correct because SecuritySettings is not a valid metadata type, but a setup menu that allows administrators to configure various security features such as password policies, network access, session settings, etc.

問題 #35

Northern Trail Outfitters needs to implement an archive solution for Salesforce data. This archive solution needs to help NTO do the following:

1. Remove outdated information not required on a day-to-day basis.
2. Improve Salesforce performance.

Which solution should be used to meet these requirements?

- A. Identify a location to store archived data, and move data to the location using a time-based workflow.
- **B. Identify a location to store archived data and use scheduled batch jobs to migrate and purge the aged data on a nightly basis,**
- C. Create a full copy sandbox, and use it as a source for retaining archived data.
- D. Use a formula field that shows true when a record reaches a defined age and use that field to run a report and export a report into SharePoint.

答案： B

問題 #36

All accounts and opportunities are created in Salesforce. Salesforce is integrated with three systems:

- * An ERP system feeds order data into Salesforce and updates both Account and Opportunity records.
- * An accounting system feeds invoice data into Salesforce and updates both Account and Opportunity records.
- * A commission system feeds commission data into Salesforce and updates both Account and Opportunity records.

How should the architect determine which of these systems is the system of record?

- A. Whatever integration data flow runs last will, by default, determine which system is the system of record.
- B. Whatever system updates the attribute or object should be the system of record for that field or object.
- **C. Data flows should be reviewed with the business users to determine the system of record per object or field.**
- D. Account and opportunity data originates in Salesforce, and therefore Salesforce is the system of record.

答案： C

問題 #37

DreamHouse Realty has a data model as shown in the image. The Project object has a private sharing model, and it has Roll-Up summary fields to calculate the number of resources assigned to the project, total hours for the project, and the number of work items associated to the project.

There will be a large amount of time entry records to be loaded regularly from an external system into Salesforce.

What should the Architect consider in this situation?

- A. Calculate summary values instead of Roll-Up by using workflow.
- B. Load all data using external IDs to link to parent records.
- C. Calculate summary values instead of Roll-Up by using triggers.
- **D. Load all data after deferring sharing calculations.**

答案: D

解題說明:

According to the exam guide, one of the objectives is to "describe the use cases and considerations for deferring sharing calculations"¹. This implies that option A is the correct way to load large amounts of data into Salesforce without affecting performance and data integrity. Deferring sharing calculations allows the data to be loaded first and then the sharing rules to be applied later². Option B is not correct because workflows are not recommended for calculating summary values, as they can cause performance issues and data skew³. Option C is not correct because triggers are also not recommended for calculating summary values, as they can cause governor limit errors and data inconsistency. Option D is not correct because external IDs are used to link records from different systems, not to improve data loading performance.

問題 #38

A large automobile manufacturer has decided to use Salesforce as its CRM. It needs to maintain the following dealer types in their CRM:

Local dealers
Regional distributor
State distributor
Service dealer

The attributes are different for each of the customer types. The CRM users should be allowed to enter only attributes related to the customer types. The processes and business rules for each of the customer types could be different.

How should the different dealers be maintained in Salesforce?

- A. Create dealers as Accounts, and build custom views for each of the dealer types.
- B. Create Custom objects for each dealer types and custom fields for dealer attributes.
- **C. Use Accounts for dealers, and create record types for each of the dealer types.**
- D. Use Accounts for dealers and custom picklist field for each of the dealer types

答案: C

問題 #39
