HPE2-W12関連試験 & HPE2-W12科目対策

最短時間で試験に合格したい場合は、HPE2-W12学習教材がこの夢を実現するのに役立ちます。お客様の特定の状況に応じたHPE2-W12学習クイズ。適切なスケジュールと学習教材を作成し、最短時間で試験に合格できるよう準備します。HPE2-W12トレーニング準備を使用する場合、HPE2-W12学習教材を練習するのに20〜30時間を費やすだけで、試験を受けて合格することができます。

HP Selling HPE Aruba Networking Solutions 認定 HPE2-W12 試験問題 (Q32-Q37):

質問 # 32

What is one way organizations can ensure their wireless network is always available?

- A. Use HPE Aruba Networking Fabric Composer to create a resilient software fabric for the wireless network.
- B. Use HPE Aruba Networking ClearPass Device Insight to proactively detect issues before they cause problems.
- C. Receive troubleshooting insights from HPE Aruba Networking ClearPass Policy Manager.
- D. Use HPE Aruba Networking CX features to orchestrate software switch updates without causing downtime.

正解: D

解説:

The correct answer is B because Aruba CX switches include advanced features such as hitless upgrades (In-Service Software Upgrades, ISSU) and intelligent orchestration tools that allow software updates and changes to be performed without downtime. This ensures continuous availability for the wireless infrastructure, as access points rely on the wired underlay provided by CX switching. Keeping the wired foundation resilient is critical to ensuring the wireless network remains available at all times.

Relevant extracts from official HPE Aruba Networking documentation:

* "Aruba CX switches deliver high availability with features like hitless software upgrades and live patching, ensuring nonstop operations."

- * "With Aruba CX automation and orchestration, IT teams can roll out software updates without service disruption, guaranteeing continuous connectivity for dependent wireless networks."
 - * "The always-on architecture of Aruba CX ensures resiliency and maximizes uptime for enterprise wireless deployments."
 - * "Continuous availability is achieved by eliminating planned downtime during upgrades, a key requirement for supporting critical wireless networks." Why the other options are incorrect:
 - * AClearPass Policy Manager provides secure access control and policy enforcement but does not ensure wireless network availability.
 - * CClearPass Device Insight focuses on device visibility and profiling, not proactive wireless availability assurance.
 - * DFabric Composer is designed for data center fabric automation, not wireless availability.
- References (HPE Aruba Networking Solutions / Study Guides):

質問 # 33

Based on recent trends, which common challenge can HPE Aruba Networking help customers overcome?

- A. Difficulties providing secure, consistent connectivity for remote workers.
- B. Difficulties making employees understand that accessing applications securely from home is impossible.
- C. Struggles in accommodating the data shift from the edge to the main corporate data center.
- D. Struggles in optimizing overprovisioned networks for a lower load of edge devices.

正解: A

解説:

The correct answer is C because one of the most pressing challenges created by the recent shift to hybrid and remote work is ensuring secure, consistent, and reliable connectivity for remote workers. Aruba addresses this with Zero Trust Network Access (ZTNA), SD-WAN, and Secure Service Edge (SSE) capabilities integrated into Aruba ESP. These solutions simplify secure remote access and deliver consistent user experiences regardless of location.

Relevant extracts from official HPE Aruba Networking documentation:

- * "The expansion of remote work has created the challenge of delivering secure, reliable connectivity for users outside the corporate perimeter."
 - * "Aruba's EdgeConnect SD-WAN and ZTNA solutions provide consistent access and enforce least-privilege policies to secure remote connectivity."
 - * "By combining Zero Trust, SASE, and AI-powered WAN optimization, Aruba ensures remote workers experience the same level of performance and security as they would on campus."
 - * "This addresses one of the top customer priorities: maintaining business continuity while supporting a distributed workforce." Why the other options are incorrect:
 - * A The challenge is not about data moving to the corporate data center—modern architectures are distributed and cloud-first.
 - * B Networks today face underprovisioning and overutilization due to IoT and remote traffic, not overprovisioned networks with fewer edge devices.
 - * D This is not a valid business challenge—Aruba enables secure access from home, it does not assume it's impossible.

質問 # 34

An IT decision-maker wants to automate troubleshooting processes and ensure the network is optimized.

Based on these requirements, which feature should you emphasize?

- A. HPE Aruba Networking Network Insight
- B. HPE Aruba Networking Fabric Composer
- C. HPE Aruba Networking ClearPass Policy Manager
- D. HPE Aruba Networking Dynamic Segmentation

正解: A

解説:

The correct answer is D because Aruba Network Insight (part of Aruba Central's AIOps capabilities) is specifically designed to automate troubleshooting, detect anomalies, and provide optimization recommendations. It uses AI/ML-based analytics to reduce mean time to resolution (MTTR), optimize network performance, and proactively prevent issues before they impact users.

Relevant extracts from official HPE Aruba Networking documentation:

- * "Aruba Network Insight leverages machine learning to automatically detect problems, recommend resolutions, and optimize performance across the network."
- * "By automating troubleshooting, IT teams spend less time firefighting and more time on strategic initiatives."
- * "Network Insight correlates user experience data with infrastructure performance to provide actionable recommendations."
- * "With AI-driven AIOps, Aruba Central reduces manual troubleshooting and ensures networks remain optimized." Why the other options are incorrect:
 - * A Dynamic Segmentation provides consistent role-based security policies, not troubleshooting automation.
 - * B Fabric Composer automates data center fabric operations, not network troubleshooting for campus / edge environments.
 - * C ClearPass Policy Manager enforces access policies but does not provide optimization or troubleshooting automation.

質問 # 35

A customer needs to deploy IoT more securely. How can HPE Aruba Networking solutions help the customer achieve this objective?

- A. HPE Aruba Networking is the only vendor to offer IoT-centric security solutions without incorporating partnerships.
- B. HPE Aruba Networking Fabric Composer helps customers build secure tunnels between IoT devices and the data center.
- C. HPE Aruba Networking Central with AI for networking helps customers discover and monitor all the devices connected to their network.
- D. HPE Aruba Networking offers agents that can easily be installed on IoT devices to encrypt communications.

正解: C

解説:

The correct option is C because HPE Aruba Networking Central, combined with AI-powered insights, provides visibility into all devices on the network, including IoT. This allows customers to discover, classify, and monitor IoT endpoints and enforce security policies. HPE emphasizes that IoT devices are often difficult to secure due to their diversity and lack of built-in protections, so network-based discovery and monitoring is critical.

Relevant extracts from official HPE Aruba Networking materials:

"Aruba Central provides AI-powered visibility that automatically identifies and profiles all devices- including IoT-connected to the network, enabling IT to apply consistent security and segmentation policies."

"IoT devices often lack inherent security; Aruba's approach leverages dynamic segmentation, policy enforcement, and AI-driven monitoring to ensure IoT traffic is visible and secured."

"By using AI-driven Central, organizations can quickly discover rogue, unknown, or misbehaving IoT devices and take automated action to reduce risk." Why the other options are incorrect:

A is inaccurate; HPE Aruba Networking works with an ecosystem of security and IoT partners and does not claim to be the only vendor with IoT-specific security.

C Fabric Composer is a data center automation tool and is not designed to create secure IoT tunnels.

D is incorrect because HPE Aruba Networking does not require agents to be installed on IoT devices, as most IoT endpoints cannot support agents. Instead, Aruba provides agentless discovery and monitoring.

質問 # 36

Which advantage does HPE Aruba Networking Fabric Composer provide?

- A. It dynamically reroutes traffic when bottlenecks occur on the network.
- **B. It provides visibility into both physical and virtual networks.**
- C. It uses AI to detect issues and provide recommendations for addressing them.
- D. It allows IT to provision both HPE Aruba Networking switches and APs.

正解: B

解説:

The correct answer is B because HPE Aruba Networking Fabric Composer is specifically designed to deliver visibility and simplified management across both physical and virtualized network fabrics in data center environments. It integrates with virtualization platforms (e.g., VMware vSphere, NSX) to extend visibility into workloads and virtual machines, alongside physical switches and fabrics. This unified visibility reduces operational complexity and ensures application performance.

Relevant extracts from HPE Aruba Networking documentation:

* "Aruba Fabric Composer is an intelligent, API-driven orchestration solution that provides end-to-end visibility across physical and virtual networks."

* "It enables IT teams to understand both physical topologies and virtualized workloads, reducing blind spots in data center operations."

* "The solution integrates with VMware and container platforms, giving IT unified insight and control over hybrid infrastructures."

Why the other options are incorrect:

* A Dynamic rerouting of traffic is a function of SD-WAN, not Fabric Composer.

* B AI-driven issue detection and recommendations are part of Aruba Central with AI Insights, not Fabric Composer.

* D Fabric Composer is focused on data center fabrics and virtualization visibility, not AP provisioning.
