If you buy Getcertkey Salesforce Integration-Architect Exam Training materials, you will solve the problem of your test preparation. You will get the training materials which have the highest quality. Buy our products today, and you will open a new door, and you will get a better future. We can make you pay a minimum of effort to get the greatest success.

Salesforce Integration-Architect certification is designed for professionals who work with Salesforce systems and are responsible for integrating Salesforce with other systems. Salesforce Certified Integration Architect certification is ideal for professionals who work as integration architects, integration developers, or integration consultants. Salesforce Certified Integration Architect certification is also ideal for professionals who work in IT and are responsible for integrating Salesforce with other systems within their organization.

Salesforce Integration-Architect Certification is important for professionals who work with Salesforce and other systems on a daily basis. It is particularly useful for IT professionals, architects, and developers who specialize in integration. Salesforce Certified Integration Architect certification demonstrates a professional's expertise in Salesforce integration, which can help them stand out in a competitive job market and open up new career opportunities.

Exam Integration-Architect Guide Materials - Integration-Architect Cert Guide

This product is enough to get ready for the Integration-Architect test on the first attempt. Three formats are easy to use and meet the needs of every Salesforce Certified Integration Architect (Integration-Architect) test applicant. The Salesforce Integration-Architect practice materials three formats are Desktop practice test software, web-based practice exam, and PDF.

Salesforce Integration-Architect Certification Exam is one of the most sought-after certifications in the Salesforce ecosystem. It is designed for professionals who have a deep understanding of the Salesforce platform and its various integration capabilities. Salesforce Certified Integration Architect certification is specifically targeted towards individuals who specialize in designing and implementing complex integrations between Salesforce and other systems.

Salesforce Certified Integration Architect Sample Questions (Q69-Q74):

NEW QUESTION # 69

Northern Trail Outfitters uses a custom Java application to display code coverage and test results for all of its enterprise applications and plans to include Salesforce as well. Which Salesforce API should an integration architect use to meet the requirement?

- A. Analytics REST API

- B. Metadata API
- C. Tooling API

Answer: C

Explanation:

For developer-centric tools that need to access fine-grained technical data like code coverage and test results, the Tooling API is the correct architectural choice.

While the Metadata API (Option B) is used to deploy or retrieve code, it does not provide real-time query access to the underlying metrics of a test run. The Tooling API, however, exposes specialized objects such as ApexCodeCoverage, ApexCodeCoverageAggregate, and ApexTestResult. These objects allow the Java application to query exactly which lines of code were executed during a test and the overall percentage of coverage for the organization.

The Analytics REST API (Option A) is designed for querying and interacting with Einstein Analytics (CRM Analytics) datasets and dashboards, which is irrelevant to software development lifecycle (SDLC) metrics. By using the Tooling API, the Java application can perform RESTful queries to gather comprehensive data on test successes, failures, and coverage gaps. This allows NTO to integrate Salesforce into its existing enterprise-wide quality dashboard, ensuring a unified view of code health across all platforms.

NEW QUESTION # 70

Universal Containers (UC) is a leading provider of management training globally, UC embarked on a Salesforce transformation journey to allow students to register for courses in the Salesforce community. UC has a learning system that masters all courses and student registration.

UC requested a near real-time feed of student registration from Salesforce to the learning system. The integration architect recommends using Salesforce event.

Which API should be used for the Salesforce platform event solution?

- A. O REST AP
- B. SOAP API
- C. Tooling API
- D. Streaming API

Answer: D

Explanation:

The API that should be used for the Salesforce platform event solution is Tooling API. Tooling API is a specialized API that exposes metadata used in developer tooling that you can access through REST or SOAP. You can use Tooling API to create, update, or delete platform event definitions and fields. Streaming API is used to subscribe to platform events and receive notifications when they are published. References: Platform Events Developer Guide | Salesforce Developers, Define and Publish Platform Events Unit | Salesforce Trailhead QUESTION NO: 241 Northern Trail Outfitters is in the final stages of merging two Salesforce orgs but needs to keep the retiring org available for a short period of time for lead management as it is connected to multiple public web site forms. The sales department has requested that new leads are available in the new Salesforce instance within 30 minutes.

NEW QUESTION # 71

A subscription-based media company's system landscape forces many subscribers to maintain multiple accounts and to log in more than once. An Identity and Access Management (IAM) system, which supports SAML and OpenId, was recently implemented to improve the subscriber experience through self-registration and single sign-on (SSO). The IAM system must integrate with Salesforce to give new self-service customers instant access to Salesforce Community Cloud.

Which requirement should Salesforce Community Cloud support for self-registration and SSO?

- A. OpenId Connect Authentication Provider and JIT provisioning
- B. SAML SSO and Just-in-Time (JIT) provisioning
- C. SAML SSO and Registration Handler

Answer: A

NEW QUESTION # 72

A call center manager uses a custom dashboard to track Case related metrics. The manager wants a component to display the

number of closed Cases in real time.

What type of event should be used to meet this requirement?

- **A. Change Data Capture Event**
- B. Platform Event
- C. Push Topic Event
- D. Generic Event

Answer: A

Explanation:

Explanation

Change Data Capture Event is the best option to meet this requirement. Change Data Capture Event is a type of streaming event that notifies subscribers of changes to Salesforce records, such as creation, update, delete, and undelete operations¹. By subscribing to Change Data Capture Event for the Case object, the dashboard component can receive real-time updates on the number of closed Cases. Push Topic Event is another type of streaming event that notifies subscribers of changes to Salesforce records that match a SOQL query². However, Push Topic Event has some limitations, such as not supporting all SOQL features and not capturing delete and undelete operations³. Platform Event is a type of streaming event that delivers custom notifications within the Salesforce platform or from external sources⁴. Platform Event is not suitable for this requirement because it is not tied to Salesforce records and requires custom logic to publish and subscribe. Generic Event is a type of streaming event that sends custom JSON notifications to subscribers without a predefined schema⁵. Generic Event is not suitable for this requirement because it is not tied to Salesforce records and requires custom logic to publish and subscribe.

NEW QUESTION # 73

A company that is a leading provider of training delivers courses to students globally. The company decided to use customer community in order to allow student to log in to the community, register for courses and pay course fees. The company has a payment gateway that takes more than 30 seconds to process the payment transaction. Students would like to get the payment result in real-time so in case an error happens, the students can retry the payment process.

What is the recommended integration approach to process payments based on this requirement?

- A. Use request and reply to make an API call to the payment gateway.
- B. Use platform event to process payment to the payment gateway.
- **C. Use continuation to process payment to the payment gateway.**
- **C Use change data capture to process payment to the payment gateway.**

Answer: C
