## Netskope NSK300 Exam Syllabus Topics:

Topic	Details
-------	---------

Topic 1	<ul style="list-style-type: none"> <li>• <b>Netskope Platform Monitoring:</b> This section of the exam measures the capabilities of Security Operations Center (SOC) Analysts and focuses on monitoring the platform through reporting and analytics tools. It highlights how Netskope insights support visibility into user activity, cloud app behavior, and policy effectiveness to help organizations maintain a continuous cloud security posture.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>Netskope Platform Implementation:</b> This section of the exam measures the abilities of Cloud Security Engineers and focuses on implementing the Netskope Security Cloud Platform using recommended steering architectures and deployment approaches. It includes key concepts such as API-enabled protection and real-time protection features, ensuring candidates understand how to deploy Netskope to secure cloud usage effectively within enterprise networks.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Netskope Platform Troubleshooting:</b> This section of the exam measures the skills of Support Engineers and focuses on identifying and resolving common issues within the Netskope platform. It includes troubleshooting client connectivity problems, analyzing steering methods, resolving general connectivity concerns, and addressing SAML integration issues. The section ensures candidates can diagnose and fix issues that impact platform performance and user access.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Cloud Security Solutions:</b> This section of the exam measures the skills of Cloud Security Analysts and covers the core components and functions of the Netskope Security Cloud Platform. It includes understanding how the platform integrates with enterprise environments, the deployment methods supported by Netskope, and the role of various microservices in delivering cloud-based security. The focus is on ensuring candidates can recognize how Netskope's architecture protects users, applications, and data across cloud services.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Netskope Platform Management:</b> This section of the exam measures the skills of Security Administrators and covers essential administrative tasks required to manage the Netskope Security Cloud Platform. It includes managing DLP functions, handling identity integrations, and monitoring Netskope components to maintain platform stability. The domain ensures professionals can manage daily operations and maintain strong access, data, and security controls.</li> </ul>

## Netskope Certified Cloud Security Architect Sample Questions (Q25-Q30):

### NEW QUESTION # 25

You created a Real-time Protection policy that blocks all activities to non-corporate S3 buckets, but determine that the policy is too restrictive. Specifically, users are complaining that normal websites have stopped rendering properly. How would you solve this problem?

- A. Create a Real-time Protection policy to allow the Download activity to the Amazon S3 application
- **B. Create a Real-time Protection policy to allow the Browse activity to the Cloud Storage category**
- C. Create a Real-time Protection policy to allow the Download activity to the Cloud Storage category
- D. Create a Real-time Protection policy to allow the Browse activity to the Amazon S3 application.

**Answer: B**

Explanation:

To solve the problem of normal websites not rendering properly due to a Real-time Protection policy that blocks all activities to non-corporate S3 buckets, the best solution is to create a Real-time Protection policy to allow the Browse activity to the Cloud Storage category. This approach will enable users to view content from various cloud storage services, including Amazon S3, without allowing full access to non-corporate S3 buckets. It's a more granular and less restrictive policy that allows necessary browsing activities while still maintaining control over the upload and download activities to non-corporate buckets<sup>1</sup>.

The Netskope Knowledge Portal provides information on how to configure Real-time Protection policies, including how to set up policies that allow certain activities while blocking others<sup>1</sup>. Additionally, the Netskope Community Forum offers insights into best practices for policy configuration to avoid overly restrictive rules that can impact normal web browsing

### NEW QUESTION # 26

Review the exhibit.

You created an SSL decryption policy to bypass the inspection of financial and accounting Web categories.

However, you still see banking websites being inspected.

Referring to the exhibit, what are two possible causes of this behavior? (Choose two.)

- A. An incorrect action has been specified.
- B. An incorrect category has been selected
- C. The policy is in a "pending changes" state.
- D. The policy is in a "disabled" state.

**Answer: A,B**

#### NEW QUESTION # 27

A hospital has a patient form that they share with their patients over Gmail. The blank form can be freely shared among anyone.

However, if the form has any information filled out, the document is considered confidential.

Which rule type should be used in the DLP profile to match such a document?

- A. Use Exact Match with patient names
- B. Use fingerprint classification.
- C. Use predefined DLP Rule(s) that match the patient name.
- D. Use a dictionary rule for all your patient names.

**Answer: B**

Explanation:

The appropriate rule type to use in the DLP profile for a document that is considered confidential when filled out is fingerprint classification. Fingerprinting is a method used to identify and protect sensitive data within documents. It works by creating a digital fingerprint of a file, which can then be used to detect any copies or derivatives of that file. In this case, fingerprinting would allow the hospital to differentiate between the blank patient form, which can be freely shared, and the same form with patient information filled out, which is confidential.

Netskope's DLP rules can contain elements such as predefined data identifiers, custom data identifiers, keyword identifiers from a dictionary file, RegEx expressions, and exact match criteria. For this specific use case, fingerprint classification is the most effective method as it can accurately detect the presence of filled-out information in the forms, which is crucial for maintaining patient confidentiality as per HIPAA regulations.

#### NEW QUESTION # 28

You are implementing Netskope Cloud Exchange in your company to include functionality provided by third-party partners. What would be a reason for using Netskope Cloud Risk Exchange in this scenario?

- A. to map multiple scores to a normalized range
- B. to automate service tickets from alerts of interest
- C. to ingest events and alerts from a Netskope tenant
- D. to feed SOC with detection and response services

**Answer: B**

Explanation:

The reason for using Netskope Cloud Risk Exchange in this scenario is to automate service tickets from alerts of interest. Netskope Cloud Risk Exchange (CRE) is designed to ingest user, device, and application risk scores, creating a dashboard view of contributors to your company's overall risk score and trend. One of the key functionalities of CRE is to trigger risk-reducing actions through business rules that are tuned to a weighted score. Automating service tickets from alerts of interest is a part of this functionality, as it allows for the automatic creation of tickets in response to specific alerts, streamlining the process of addressing potential security issues.

#### NEW QUESTION # 29

You are asked to create a customized restricted administrator role in your Netskope tenant for a newly hired employee. Which two statements are correct in this scenario? (Choose two.)

- A. All role privileges default to Read Only for all functional areas.
- B. The scope of the data shown in the UI can be restricted to specific events.

- C. Obfuscation can be applied to all functional areas.
- D. An admin role prevents admins from downloading and viewing file content by default.

Answer: B,C
