DumpStillValid offers a free trial for all the products and give you an open chance to test its various features. If you are satisfied with the demo so, you can buy SPLK-1004 exam questions PDF or Practice software. We updated our product frequently, our

determined team is always ready to make certain alterations as and when SPLK-1004 announce any changing.

Splunk Core Certified Advanced Power User Sample Questions (Q19-Q24):

NEW QUESTION # 19

How can form inputs impact dashboard panels using inline searches?

- A. Adding a form input to a dashboard converts all panels to prebuilt panels.
- B. Form inputs cannot impact panels using inline searches.
- C. A token in a search can be replaced by a form input value.
- D. Panels powered by an inline search require a minimum of one form input.

Answer: C

Explanation:

Form inputs can dynamically update panels in a dashboard by replacing tokens in the search string with the form input value, making dashboards interactive and responsive to user selections.

NEW QUESTION # 20

Which of the following functions' primary purpose is to convert epoch time to a string format?

- A. tostring
- B. tonumber
- C. strftime
- D. strftime

Answer: D

Explanation:

The strftime function in Splunk is used to convert epoch time (also known as POSIX time or Unix time, which is a system for describing points in time as the number of seconds elapsed since January 1, 1970) into a human-readable string format. This function is particularly useful when formatting timestamps in search results or when creating more readable time representations in dashboards and reports. The strftime function takes an epoch time value and a format string as arguments and returns the formatted time as a string according to the specified format. The other options (tostring, strftime, and tonumber) serve different purposes: tostring converts values to strings, strftime converts string representations of time into epoch format, and tonumber converts values to numbers.

NEW QUESTION # 21

Which of the following has a schema or structure embedded in the data itself?

- A. Embedded data
- B. Dark data
- C. Self-describing data
- D. Unstructured data

Answer: C

Explanation:

Self-describing data includes information about its structure within the data itself. Examples include formats like JSON and XML, where the data schema is embedded and can be easily interpreted without external references.

NEW QUESTION # 22

A report named "Linux logins" populates a summary index with the search string sourcetype=linux_secure | sitop src_ip user. Which of the following correctly searches against the summary index for this data?

- A. index=summary sourcetype="linux_secure" | top src_ip user
- B. index=summary sourcetype="linux_secure" | stats count by src_ip user
- C. index=summary search_name="Linux logins" | stats count by src_ip user

- D. index=summary search_name="Linux logins" | top src_ip user

Answer: C

Explanation:

The correct way to search against the summary index for this data is:

```
index=summary search_name="Linux logins" | stats count by src_ip user
```

Here's why this works:

* **Summary Index:** Summary indexes store pre-aggregated data generated by scheduled reports or saved searches. To query this data, you must specify the `index=summary` and filter by the `search_name` field, which identifies the specific report that populated the summary index.

* **Aggregation:** The original search uses `sitop`, which is designed for summary indexing. When querying the summary index, you should use `stats` to aggregate the pre-aggregated data further.

Example:

```
index=summary search_name="Linux logins"
| stats count by src_ip user
```

References:

Splunk Documentation on Summary Indexing: <https://docs.splunk.com/Documentation/Splunk/latest/Knowledge/Usesummaryindexing>

Splunk Documentation on `sitop`: <https://docs.splunk.com/Documentation/Splunk/latest/SearchReference/sitop>

NEW QUESTION # 23

Which search generates a field with a value of "hello"?

- A. | Makeresults | eval field =make {"hello"}
- B. | Makeresults | fields "hello"
- C. | Makeresults field- "hello"
- D. | Makeresults | eval field- "hello"

Answer: D

Explanation:

To generate a field with a value of "hello" using the `makeresults` command in Splunk, the correct syntax is `| makeresults | eval field="hello"` (Option C). The `makeresults` command creates a single event, and the `eval` command is used to add a new field (named "field" in this case) with the specified value ("hello"). This is a common method for creating sample data or for demonstration purposes within Splunk searches.

NEW QUESTION # 24

.....

The SPLK-1004 practice test is supported by all major browsers such as Chrome, IE, Firefox, Safari, and Opera. This Splunk Core Certified Advanced Power User (SPLK-1004) practice test consists of real Splunk Core Certified Advanced Power User (SPLK-1004) exam questions and thousands of customers have successfully cleared the SPLK-1004 Exam with confidence.
