Google-Workspace-Administrator模擬解説集 & Google-Workspace-Administrator資格トレーニング

Google-Workspace-Administratorトレーニング資料を用意しました。これらは、保証期間中の専門的な練習資料です。参考のために許容できる価格に加えて、3つのバージョンのすべての資料は、10年以上にわたってこの分野の専門家によって編集されています。さらに、一連の利点があります。したがって、Google-Workspace-Administratorの実際のテストの重要性は言うまでもありません。今すぐご注文いただいた場合、1年間無料の更新をお送りします。これらのサプリメントはすべて、Google-Workspace-Administrator模擬試験にも役立ちます。

Google Workspace Administrator 資格試験に備えるにあたり、候補者はGoogle Workspaceでの作業経験が必要で、コアアプリケーションやサービスに精通している必要があります。Googleは、試験に合格するために必要なスキルや知識をカバーするCourseraのGoogle Workspace Administrationスペシャリゼーションを修了することを推奨しています。また、候補者は、Googleのトレーニングや認定プログラム、および第三者のプロバイダーを通じて、学習資料や模擬試験を見つけることができます。

Google Cloud Certified - Professional Google Workspace Administrator 認定Google-Workspace-Administrator 試験問題 (Q32-Q37):

質問 # 32

Your organization recently deployed Google Workspace. Your admin team has been very focused on configuring the core services for your environment, which has left you little time to pay attention to other areas. Your security team has just informed you that many users are leveraging unauthorized add-ons, and they are concerned about data exfiltration. The admin team wants you to cut off all add-ons access to Workspace data immediately and block all future add-ons until further notice. However, they approve of users leveraging their Workspace accounts to sign into third-party sites. What should you do?

- A. Set all API services to "restricted access" and ensure that all connected apps have limited access.
- B. Modify your Marketplace Settings to block users from installing any app from the Marketplace.
- **C. Remove all client IDs and scopes from the list of domain-wide delegation API clients.**
- D. Block each connected app's access.

正解: C

解説:

<https://support.google.com/a/answer/162106?hl=en#zippy=%2Cview-edit-or-delete-clients-and-scopes&context=View%2C%20edit%2C%20or%20immediately%20stop%20working>

質問 # 33

Your organization is using Password Sync to sync passwords from Active Directory to Google Workspace. A user changed their network password and cannot log in to Google Workspace with the new password. What steps should you take to troubleshoot this issue?

- A. Reauthorize the Password Sync tool in the Google Workspace Admin Console.
- B. Reset the user's password in Active Directory.
- **C. Confirm that the Password Sync service is running on all domain controllers.**
- D. Reinstall Password Sync on all domain controllers.

正解: C

質問 # 34

Employees at your organization frequently and mistakenly delete important emails that they receive from your payroll department. The employees have to file support tickets for the IT team to find and restore these emails. You must provide an automated solution that minimizes IT overhead and prevents these emails from being permanently deleted from their inboxes. What should you do?

- **A. Create an activity rule by using Gmail log events with two conditions: one for the event of an email deletion and another that matches the header address to the payroll department's email. Create an action that restores messages. Set the rule to run every hour.**
- B. Create an Apps Script project that uses the Gmail API to find any recently deleted emails and automatically restore them to the inboxes. Set the script trigger to be time-driven and run every hour.
- C. Create a content compliance rule that targets internal messages. Use an advanced content match for the sender header to match the payroll department's email. Quarantine the message so that administrators can review the email before they release it to the user.
- D. Create a content compliance rule that targets all internal messages that are sent from the payroll department. Modify the message by prepending a custom subject line to all payroll emails so that employees know not to delete them.

正解: A

解説:

* Access Admin Console: Go to the Google Admin console and navigate to the 'Reports' section.

* Activity Rule Setup: Select 'Manage Rules' and create a new rule.

* Define Conditions:

* Condition 1: Event equals 'Email Deletion'.

* Condition 2: Header address matches the payroll department's email address.

* Set Action: Define the action to restore the messages to the inbox.

* Schedule the Rule: Set the rule to run every hour.

* Test and Monitor: Ensure the rule is working as expected by monitoring the results and making adjustments if necessary.

References

* Create and manage activity rules

* Gmail API

質問 # 35

Several customers have reported receiving fake collection notices from your company. The emails were received from `accounts.receivable@yourcompany.com`, which is the valid address used by your accounting department for such matters, but the email audit log does not show the emails in question. You need to stop these emails from being sent.

What two actions should you take? (Choose two.)

- **A. Configure a Sender Policy Framework (SPF) record for your domain.**
- B. Disable mail delegation for the `accounts.receivable@yourcompany.com` account.
- **C. Change the password for suspected compromised account `accounts.receivable@yourcompany.com`.**
- D. Configure Domain Keys Identified Mail (DKIM) to authenticate email.
- E. Disable "Allow users to automatically forward incoming email to another address."

正解: A、C

解説:

Change the password for the suspected compromised account:

Sign in to the Google Admin console.

From the Admin console Home page, go to "Users."

Find and select the account "`accounts.receivable@yourcompany.com`"

Click on "Security" and then "Password."

Follow the instructions to change the password.

Configure a Sender Policy Framework (SPF) record for your domain:

Log in to your domain host (e.g., GoDaddy, Bluehost).

Locate the page for updating your domain's DNS records.

Add a new TXT record for your domain with the SPF rule, typically something like:

`v=spf1 include:_spf.google.com ~all`

Save the changes to update the DNS records.

Changing the password helps secure the compromised account, while configuring SPF helps prevent email spoofing, ensuring that fake emails are less likely to be delivered as though they come from your legitimate email address.

質問 # 36

A company wants to distribute iOS devices to only the employees in the Sales OU. They want to be able to do the following on these devices:

Control password policies.

Make corporate apps available to the users.

Remotely wipe the device if it's lost or compromised

What two steps are required before configuring the device policies? (Choose two.)

- **A. Turn on Advanced Mobile Management for Sales OU**
- **B. Set up an Apple Push Certificate.**
- C. Set up Device Approvals.
- D. Turn on Advanced Mobile Management for the domain.
- E. Deploy Apple Certificate to every device.

正解: A、B

解説:

Admin Console: Log into the Google Admin console at `admin.google.com`

Enable Advanced Mobile Management for Sales OU:

Navigate to Devices > Mobile & endpoints > Settings.

Select the Sales OU and turn on Advanced Mobile Management.

Set Up an Apple Push Certificate:

Go to Devices > Mobile & endpoints > Apple certificates.

Follow the instructions to obtain and upload an Apple Push Certificate.

Device Policies:

After setting up the Apple Push Certificate, configure the desired device policies such as password policies, app distribution, and remote wipe capabilities.
