

C1000-189 Pass4sure vce - C1000-189 Updated Training & C1000-189 prep practice

DOWNLOAD the newest ITCertMagic C1000-189 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1qU5Xbp6zCL8T4YNcABKxp6FPvpwYj7T3>

Our C1000-189 exam braindumps offer you a wide and full coverage of the keypoints on the career-oriented certification and help you pass the exam without facing any difficulty. And you will find that the subject is well compiled to the content of the C1000-189 training guide in our three different versions. They are the PDF, Software and APP online. The content of these versions is the same, but the displays of our C1000-189 learning questions are all different. You can choose the favorite one.

IBM C1000-189 Exam Overview:

Certification Vendor:	IBM
Exam Name:	IBM Instana Observability v1.0.277 Administrator - Professional
Exam Number:	C1000-189
Real Exam Qty:	61
Exam Duration:	90 minutes
Passing Score:	41/61
Exam Format:	Multiple choice, Multiple response, Scenario-based questions
Related Certifications:	IBM Instana Observability v1.0.277 Administrator
Certificate Validity Period:	Typically aligned with product version (v1.x), renewal required for major updates
Available Languages:	English
Exam Price:	\$200 USD (approx., region dependent)
Recommended Training:	IBM Instana Foundations (TN205G)
Exam Registration:	Pearson VUE IBM Exams IBM Certification Portal
Sample Questions:	IBM C1000-189 Sample Questions
Exam Way:	Computer-based exam via Pearson VUE (online proctored or test center)
Pre Condition:	Recommended experience with IBM Instana administration and monitoring in SaaS and/or on-prem environments
Official Syllabus URL:	https://www.ibm.com/training/certification/ibm-certified-instana-observability-v10277-administrator-professional-C9007500

Free PDF 2026 IBM Professional C1000-189: IBM Instana Observability v1.0.277 Administrator - Professional Discount

Our C1000-189 real exam materials have ugh appraisal in the market for their quality and high efficiency. Because satisfied customer is the best ads, and the word of mouth communication by the customers give others more sense of credibility than any other form of marketing communication. We know a satisfied customer will come back again for the same or different need to the company, so we always provide high-rank C1000-189 real exam materials over ten years. They have experienced all trials of the market these years approved by experts. Besides, they are easy to assimilate so if you get stuck in the bottleneck of review, and under the guidance of our IBM Instana Observability v1.0.277 Administrator - Professional exam question they are widely regarded as top notch in this area. Recently our C1000-189 Guide prep rise to the forefront in the field of practice materials. So if you need other C1000-189 real exam materials from us, we will not let you down not even once. Hope you pass the exam once successfully by our IBM Instana Observability v1.0.277 Administrator - Professional exam question and recommend them to your friends. We are sure you will be splendid!

IBM C1000-189 Exam Syllabus Topics:

Topic	Details
Topic 1	• Troubleshooting: This section of the exam measures the skills of System Support Engineers and focuses on resolving technical and operational issues in Instana. It includes configuring log levels, collecting logs for debugging, and identifying connectivity issues between agents and the backend. Candidates will troubleshoot installation failures, diagnose communication problems, and apply corrective measures to ensure consistent Instana performance and stability across environments.
Topic 2	• Integration: This section of the exam measures the skills of Integration Engineers and assesses their proficiency in connecting Instana with external monitoring and automation tools. Candidates must demonstrate knowledge of integrating agent-based systems such as Omegamon, ITM, and ITCAM, as well as external platforms like Prometheus and Grafana. The section also includes configuring alert channels, automation actions, and utilizing the Instana REST API to support customized workflows and data visibility.
Topic 3	• Installation: This section of the exam measures the skills of System Implementation Specialists and focuses on installing and deploying Instana across different environments. It includes installing the Instana backend, deploying and configuring agents, and migrating existing Instana setups. Candidates will also demonstrate their ability to implement Synthetic Monitoring and manage Points of Presence (PoPs) effectively for end-to-end performance validation.
Topic 4	• Security and Compliance: This section of the exam measures the skills of IT Security Analysts and focuses on the data protection and compliance aspects of Instana deployment. Candidates must describe and implement data retention policies, plan for regulatory compliance, secure APIs, manage user access, and interpret audit logs. The goal is to ensure secure system configurations that align with organizational and regulatory standards.
Topic 5	• Planning: This section of the exam measures the skills of Cloud Monitoring Engineers and covers the foundational planning tasks required for successful Instana deployment. Candidates must understand the installation prerequisites, the architectural design of Instana for on-premises environments, and the platform core capabilities and use cases. It also assesses knowledge of different agent modes, supported sensors and tracers, and the distinctions between cloud service agents and serverless agents essential for scalable implementation.

IBM Instana Observability v1.0.277 Administrator - Professional Sample Questions (Q15-Q20):

NEW QUESTION # 15

What is the purpose of the Infrastructure map?

- A. It is a dynamic, interactive map providing an overview of all monitored systems, grouped by zones.
- B. It is a detailed static image of all hardware resources.
- C. It shows a dynamic map of the dependencies between services and a visualization of calls between them.
- D. It shows a dynamic map of the relation between infrastructure nodes.

Answer: A

Explanation:

According to IBM Instana Observability documentation, the Infrastructure map's primary goal is to present a real-time, interactive graphical overview of monitored hosts, nodes, VMs, and cloud instances, organized by zones or clusters. The verified statement is: "The Infrastructure map provides a dynamic, interactive view of all monitored systems-grouping resources by logical or physical zones and delivering actionable context for troubleshooting and planning." Users can zoom, filter, and select entities to drill into system health and configuration, identify relationships, and pinpoint issues in geographic or topological layouts. Static images are not produced; instead, the map updates in real-time as agents detect new hosts, containers, or state changes, reflecting additions, removals, or migrations instantly. Option D describes the Service map, which visualizes application and service dependencies rather than the underlying infrastructure. Thus, C best matches the IBM documented description for Infrastructure map functionality.

NEW QUESTION # 16

By default, which rate limit is applied to Instana API calls for per hour usage?

- A. 1,000
- B. 6,000
- C. 10,000
- **D. 5,000**

Answer: D

Explanation:

Instana sets API rate limits to ensure fair resource usage and platform stability across accounts. According to the IBM Instana Observability documentation, "The default rate limit for the Instana REST API is 5,000 calls per hour per account." This policy is enforced automatically; when an account's API activity reaches the limit, further requests are temporarily blocked until the next hour begins. This guards against accidental overload as well as malicious consumption, and is fundamental for multi-tenant operation. Organizations may request increases for large-scale use cases, but 5,000 per hour is the standard value pre-configured for all accounts. Instana recommends that automation and integrations are engineered to respect this quota, using exponential backoff and batching if needed. Values such as 10,000, 6,000, or 1,000 are not defaults, and modifying them requires special support intervention.

NEW QUESTION # 17

Which language is primarily used for writing Synthetic monitoring API scripts in Instana?

- A. Java
- **B. JavaScript**
- C. Python
- D. Go

Answer: B

Explanation:

Instana's Synthetic Monitoring module allows administrators to script user journeys and API checks to validate service performance and uptime. According to official IBM documentation, "Synthetic monitoring API scripts use JavaScript as the scripting language for configuring user flows and custom API tests." Instana has designed its synthetic user interface to interpret JavaScript natively which provides powerful, flexible constructs for simulating user interactions, custom API payloads, test logic, and error handling. This ensures broad compatibility with real browser environments and highly customizable synthetic scenarios. Java, Python, and Go are not supported for browser-based or synthetic API scripting in Instana's synthetic monitors. JavaScript is chosen for its ubiquity and ease of integration with DOM-like and API interaction patterns, supporting the most common web-based automation needs as described in the documentation.

NEW QUESTION # 18

Which statement best describes Beelinstana?

- A. An operator that can be used only on self-hosted deployments that have data stores installed
- B. An operator that can be used to install Instana on Kubernetes
- **C. A Kubernetes operator that requires high-performing data stores and a distributed data store cluster.**
- D. It is a metric database used to perform complex metric queries

Answer: C

Explanation:

BeeInstana is identified in Instana's documentation as the core Kubernetes operator driving distributed installation and management of Instana components. The documentation defines: "BeeInstana is a Kubernetes operator that requires robust, high-performing distributed data stores and manages Instana deployment complexity, resource allocation, and scaling within large clusters." By leveraging Kubernetes-native constructs, BeeInstana orchestrates Instana backend, UI, sensors, and streaming components-ensuring reliable, scalable deployments for enterprise settings. The operator orchestrates failover, recovery, and persistent storage management, supporting self-hosted and hybrid installations. While it is associated with metric data handling, its main role is orchestration and operational management based on distributed database infrastructures. Simple operator installation (A, D) does not capture its full role, and describing BeeInstana as only a metric database (B) misrepresents its architectural function in Instana's platform lifecycle.

NEW QUESTION # 19

What is a valid method for an administrator to delete the 2FA settings of a user?

- A. Go to settings -> Users, select the user, and delete the 2FA settings there.
- B. Use the kubectl-instana command line utility which provides the reset-2fa command.
- C. SSH into the Clickhouse database pod, use SQL to delete the 2FA entry from the user.
- D. Submit a delete request to the API with the user's email.

Answer: A

Explanation:

Per IBM Instana's security documentation, management of two-factor authentication (2FA) is controlled directly via administrative functions in the web UI. The guidance reads: "Administrators can remove a user's 2FA association by navigating to Settings > Users, choosing the user, and using the remove or reset 2FA option in the UI." This workflow is safe, auditable, and leaves a traceable event in the audit log, satisfying enterprise security policy requirements. Direct API or CLI deletion of 2FA is not the recommended (or documented) method for Instana-managed users, and database-level manipulation (D) is unsupported as it risks data corruption. The UI approach is verified for both on-premises and SaaS installations.
