Pass Guaranteed SAP - The Best High C_CPI_2506 Passing Score

In today's world, the SAP Certified Associate - Integration Developer (C_CPI_2506) certification exam has become increasingly popular, providing professionals with the opportunity to upskill and stay competitive in the tech industry. At ExamCost, we understand the importance of obtaining the SAP C_CPI_2506 Certification in the SAP sector, where technological advancements constantly evolve.

SAP Certified Associate - Integration Developer Sample Questions (Q10-Q15):

NEW QUESTION # 10

You want to implement a synchronous call to a remote HTTP API as an integration flow component. Which adapter can you use?

- A. AMQP
- B. Mail
- C. OData
- D. SFTP

Answer: C

Explanation:

You can use an OData adapter to implement a synchronous call to a remote HTTP API as an integration flow component. An OData adapter allows you to send and receive messages using the OData protocol. OData stands for Open Data Protocol and is a standard for exposing and consuming data over HTTP or HTTPS. You can use an OData adapter to communicate with OData services that support CRUD (Create, Read, Update, Delete) operations on resources. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 11

In your integration flow process, the request reply returns a message with namespaces. What can you do to delete namespaces from this message? Note: There are 2 correct answers to this question.

- A. Use an XSLT mapping.
- B. Set up the request reply to delete the namespaces
- C. Set up the namespace mapping in the Runtime Configuration.
- D. Use a Content Modifier

Answer: A,D

Explanation:

A Content Modifier is a step in an integration flow that allows you to modify the message header or body using expressions or constants. You can use a Content Modifier to delete namespaces from a message by using expressions that remove the namespace declarations or prefixes from the XML elements or attributes. For example, you can use the expression `replace($body, "xmlns:ns[0-9]+=[\"[`
