Salesforce Order-Management-Administrator Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Process Automation and Integrations: This section helps the Salesforce Order Management Administrator Consultant demonstrate the capability to deliver business value by integrating Order Management with external systems using clicks rather than code. Mastery of navigation within Order Management processes, connecting nodes, and integrating systems efficiently ensures understanding of how to implement effective solutions.
Thema 2	• Data Model: This topic equips the Salesforce Order Management Administrator Consultant to showcase knowledge of critical objects such as Order, Order Summary, Fulfillment Orders, and Return Orders. It involves establishing and tracing integrations with B2C Commerce or other systems, including custom attributes. Proficiency here is pivotal for ensuring seamless data flow and robust Order Management operations within complex business environments.
Thema 3	• Advanced Topics: This topic challenges the Salesforce Order Management Administrator Consultant to diagnose and resolve configuration issues that hinder the launch or operation of Order Management processes. Proficiency includes troubleshooting integration problems and articulating how various processes interact to support successful deployments and system functionality.

15. Frage

How can an administrator allow an org to publish a change set to another org?

- A. In the target org: Open Deployment Settings, Click Edit next to the source org. Select Allow Inbound Changes and Click Save
- **B. In the target org: Open Deployment Settings, Select the environments to allow publishing from and Move them to the Enabled list**
- C. In the source org: Open Publish Settings, Select the checkbox next to the environment to publish to and Click Save
- D. In the source org: open Deployment settings, Select the environments to publish to and Move them to the enabled list

Antwort: B

Begründung:

The correct way for an administrator to allow an org to publish a change set to another org is to open Deployment Settings in the target org, select the environments to allow publishing from and move them to the Enabled list. This creates a deployment connection between the source org and the target org, which allows the source org to upload change sets to the target org. 16. Frage

Universal Containers (UC) has a flow which performs some custom logic in order to determine a least-cost shipping location. Some of the variables should be reset at the beginning of each loop iteration. Which design element in Flow allows the Admin to do this?

- A. Preset
- B. Reset
- C. Reassignment
- **D. Assignment**

Antwort: D

Begründung:

The design element in Flow that allows the admin to reset some variables at the beginning of each loop iteration is Assignment. An Assignment element lets the admin assign new values to one or more variables or sObject fields in a flow. The admin can use an Assignment element before a Loop element to initialize the variables that are used in the loop, and then use another Assignment element inside the loop to reset the variables for each iteration. 17. Frage

An administrator is tasked to utilize a Product Price Book which is managed on an external platform. How can the administrator meet this requirement?

- A. Go to Setup. Order settings, and select Enable Optional Price Books for Orders
- **B. Create an External Data Source in Setup which references the external platform where the Pricebook is held**
- C. Edit the Product page layout to make the Pricebook field not require
- D. This is not possible, all Products require a Pricebook Entry

Antwort: B

Begründung:

The best way for the administrator to meet this requirement is to create an External Data Source in Setup that references the external platform where the Pricebook is held. An External Data Source is a type of metadata that defines the connection and authentication information for an external system that stores data outside of Salesforce. The administrator can create an External Data Source using the Lightning Connect OData 2.0 or 4.0 adapters, which support read-only access to data in relational databases. This way, the administrator can access the Product Price Book data from the external platform without importing it into Salesforce. 18. Frage

What are two reasons for using Flows instead of Apex code?

- A. Flows can be triggered by undelete events
- B. Flows have better performance options for large batches of records
- C. Flows provide a visual debug process
- D. Flows can be modified and created without a developer

Antwort: C,D

Begründung:

Two reasons for using Flows instead of Apex code are:

Flows can be modified and created without a developer. Flows are declarative tools that allow administrators to build complex business logic using clicks instead of code. Flows do not require any programming skills or knowledge, and they can be easily modified and maintained by administrators.

Flows provide a visual debug process. Flows have a built-in debugger that allows administrators to test and troubleshoot their flows in a graphical interface. The debugger shows the flow execution path, the values of variables and sObject fields, and any errors or warnings that occur in the flow.

19. Frage

A user wants to review credit card payment data for a specific Order. Which object should the employee navigate to?

- A. Order
- B. Payment
- C. Payment Method
- D. Order Payment Summary

Antwort: D

Begründung:

The object that the user should navigate to to review credit card payment data for a specific Order is Order Payment Summary. An Order Payment Summary is a record that represents a payment made for an order or part of an order. An Order Payment Summary has a lookup relationship to both Order Summary and Invoice objects, and it contains information such as the payment amount, method, status, etc. Verified Reference: https://help.salesforce.com/s/articleView?id=sf.order_management_order_payment_summary.htm&type=5
