Secondly if you want to get the free updates not just for one year, you want to still get the new version of Salesforce Order-Management-Administrator valid exam collection materials after one year, you share 50% discount for the second year.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q29-Q34):

NEW QUESTION # 29

An administrator has created a new currency field on the Fulfillment Order object and wants to roll up the total to the Order Summary object. When creating a rollup field on the Order Summary object, Fulfillment Order does not appear as an option. Why is this?

- A. Rollup Fields cannot sum Currency Fields
- B. The Rollup Summary field must be created on the Fulfillment Order object with the Order Summary object as the parent
- C. The Order Summary object has reached the limit of Rollup Summary fields
- **D. The Order Summary field on the Fulfillment Order object is a Lookup**

Answer: D

Explanation:

The reason why Fulfillment Order does not appear as an option when creating a rollup field on the Order Summary object is that the Order Summary field on the Fulfillment Order object is a Lookup. A Lookup field is a type of custom field that creates a relationship between two objects, but does not support rollup summary fields. To create a rollup summary field, the relationship between the objects must be master-detail, which means that the child record cannot exist without its parent record. Verified Reference: https://help.salesforce.com/s/articleView?id=sf.custom_field_types.htm&type=5 https://help.salesforce.com/s/articleView?id=sf.fields_about_roll_up_summary_fields.htm&type=5

NEW QUESTION # 30

Which three components can be used to modify the user experience in the Order Summary detail page?

- **A. Related List-Single**
- B. Related List - Double
- **C. Accordion**
- **D. Tabs**

Answer: A,C,D

Explanation:

Explanation

Three components that can be used to modify the user experience in the Order Summary detail page are:

Tabs. Tabs are a type of component that allow users to switch between different views or subpages on a record page. Tabs can contain other components, such as charts, reports, or custom components, that display different information or functionality related to a record. The administrator can use the Lightning App Builder to add and customize tabs on the Order Summary detail page to give users more options and flexibility.

Accordion. Accordion is a type of component that allow users to expand and collapse sections of a record page. Accordion can contain other components, such as fields, related lists, or custom components, that display different information or functionality related to a record. The administrator can use the Lightning App Builder to add and customize accordion on the Order Summary detail page to give users more control and visibility.

Related List-Single. Related List-Single is a type of component that displays a single related list for a record. A related list is a list of records that are linked to another record by a relationship field, such as lookup or master-detail. The administrator can use the Lightning App Builder to add and customize related list-single on the Order Summary detail page to give users more access and context.

NEW QUESTION # 31

Which two objects are found within Order Management?

- A. Receipt
- **B. Payment Summary**
- C. Packing Manifest
- **D. Fulfillment Order**
- E. Cart

Answer: B,D

Explanation:

Two objects that are found within Order Management are:

Fulfillment Order. A Fulfillment Order is a record that represents a group of products in an order that are fulfilled together from the same location. A Fulfillment Order has a lookup relationship to the Order Summary object, and it contains information such as the fulfillment location, delivery method, status, etc.

Payment Summary. A Payment Summary is a record that represents a payment made for an order or part of an order. A Payment Summary has a lookup relationship to both Order Summary and Invoice objects, and it contains information such as the payment amount, method, status, etc.

NEW QUESTION # 32

What does the number of Fulfillment Orders created depend upon?

- A. Fulfillment Location, Recipient Address and Quantity
- B. Fulfillment Location, Delivery Method and Number of Payments
- **C. Fulfillment Location, Delivery Method and Recipient Address**
- D. Fulfillment Location, Delivery Charges and Quantity

Answer: C

Explanation:

Explanation

The number of Fulfillment Orders created depends on three factors: Fulfillment Location, Delivery Method and Recipient Address.

These factors determine how the Order Items are grouped and allocated to Fulfillment Orders based on routing rules and inventory availability. For example, if an order has two items that can be fulfilled from different locations, or have different delivery methods or recipient addresses, then two Fulfillment Orders are created for that order. Verified

NEW QUESTION # 33

An admin is working with Order Management licensed as standalone (B2C Commerce is not in the scenario).

The admin submits a JSON payload using Workbench and Workbench indicates the operation was successful. The second time the same payload is submitted the operation fails. What are two likely causes?

- A. The stock levels in the org are depleted from the first order
- B. Stock Keeping Unit values must be updated
- **C. The payment data must be updated**
- **D. The Order Reference Number must be updated**

Answer: C,D

Explanation:

Two likely causes that could make the second submission of the same JSON payload fail are:

The payment data must be updated. The payment data in the JSON payload contains information such as the payment method, amount, and authorization code. If the same payment data is used for the second order, it may cause a duplicate payment error or an invalid authorization error.

The Order Reference Number must be updated. The Order Reference Number is a unique identifier for each order that is generated by the external system and sent in the JSON payload. If the same Order Reference Number is used for the second order, it may cause a duplicate order error or an invalid order error.
