ZertFragen bietet verschiedene Schulungsunterlagen und Ressourcen zur Vorbereitung der Amazon AIF-C01 Prüfung. Es umfasst Kurse, Praxis-Test, Online Test Engine und einen Teil kostenloser PDF-Download.

Amazon AIF-C01 Prüfungsplan:

Thema	Einzelheiten
Thema 1	Security, Compliance, and Governance for AI Solutions: This domain covers the security measures, compliance requirements, and governance practices essential for managing AI solutions. It targets security professionals, compliance officers, and IT managers responsible for safeguarding AI systems, ensuring regulatory compliance, and implementing effective governance frameworks.
Thema 2	Fundamentals of Generative AI: This domain explores the basics of generative AI, focusing on techniques for creating new content from learned patterns, including text and image generation. It targets professionals interested in understanding generative models, such as developers and researchers in AI.
Thema 3	Fundamentals of AI and ML: This domain covers the fundamental concepts of artificial intelligence (AI) and machine learning (ML), including core algorithms and principles. It is aimed at individuals new to AI and ML, such as entry-level data scientists and IT professionals.
Thema 4	Guidelines for Responsible AI: This domain highlights the ethical considerations and best practices for deploying AI solutions responsibly, including ensuring fairness and transparency. It is aimed at AI practitioners, including data scientists and compliance officers, who are involved in the development and deployment of AI systems and need to adhere to ethical standards.
Thema 5	Applications of Foundation Models: This domain examines how foundation models, like large language models, are used in practical applications. It is designed for those who need to understand the real-world implementation of these models, including solution architects and data engineers who work with AI technologies to solve complex problems.

AIF-C01 Prüfungsressourcen: AWS Certified AI Practitioner & AIF-C01 Reale Fragen

Die Materialien zur Amazon AIF-C01 Zertifizierungsprüfung von ZertFragen werden speziell von dem IT-Expertenteam entworfen. Sie sind zielgerichtet. Durch die Zertifizierung können Sie Ihren internationalen Wert in der IT-Branche verwirklichen. Viele Anbieter für Antwortenspeicherung und die Schulungsunterlagen versprechen, dass Sie die Amazon AIF-C01 Zertifizierungsprüfung mit ihren

Produkten bestehen können. ZertFragen sagen mit den Beweisen. Der Moment, wenn das Wunder vorkommt, kann jedes Wort von uns beweisen.

Amazon AWS Certified AI Practitioner AIF-C01 Prüfungsfragen mit Lösungen (Q200-Q205):

200. Frage

A company is building a new generative AI chatbot. The chatbot uses an Amazon Bedrock foundation model (FM) to generate responses. During testing, the company notices that the chatbot is prone to prompt injection attacks. What can the company do to secure the chatbot with the LEAST implementation effort?

- A. Use Amazon Bedrock Guardrails content filters and denied topics.
- B. Use chain-of-thought prompting to produce secure responses.
- C. Fine-tune the FM to avoid harmful responses.
- D. Change the FM to a more secure FM.

Antwort: A

Begründung:

Amazon Bedrock Guardrails allow developers to create safeguards that filter harmful content and prevent sensitive topics from being discussed. This functionality helps mitigate prompt injection attacks with minimal implementation effort. According to the official Amazon Bedrock documentation:

Explanation:

Amazon Bedrock Guardrails allow developers to create safeguards that filter harmful content and prevent sensitive topics from being discussed. This functionality helps mitigate prompt injection attacks with minimal implementation effort. According to the official Amazon Bedrock documentation:

"You can configure Guardrails for Amazon Bedrock to define denied topics, use content filters, and apply sensitive information filters, offering protection against prompt injection attacks with minimal development effort."

201. Frage

A company needs to build its own large language model (LLM) based on only the company's private data. The company is concerned about the environmental effect of the training process. Which Amazon EC2 instance type has the LEAST environmental effect when training LLMs?

- A. Amazon EC2 P series
- B. Amazon EC2 G series
- C. Amazon EC2 C series
- D. Amazon EC2 T series

Antwort: D

202. Frage

A company has implemented a generative AI solution to create personalized exercise routines for premium subscription users. The company offers free basic subscriptions and paid premium subscriptions. The company wants to evaluate the AI solution's return on investment over time.

- A. The average revenue per user (ARPU) over the past month
- B. The number of daily interactions by basic subscription users
- C. The conversion rate and the customer retention rate
- D. The decrease in the number of premium customer queries and issue volume

Antwort: C

Begründung:

The correct answer is C, as conversion rate (how many users upgrade to premium) and retention rate (how many stay subscribed) are primary indicators of a generative AI system's business impact and ROI.

According to AWS documentation, evaluating AI performance should go beyond technical accuracy to include business metrics that show real-world value. For a premium service, higher conversion implies successful personalization that attracts free users, while strong retention reflects sustained engagement and user satisfaction. Metrics like ARPU or query reduction are secondary indicators.

AWS emphasizes outcome- based measurement to ensure AI initiatives contribute measurable ROI tied to customer adoption, loyalty, and profitability. Therefore, tracking conversion and retention gives the clearest long-term measure of financial success from generative AI.

AWS AI Adoption Framework - Value Realization and ROI Tracking

203. Frage

A company wants to keep its foundation model (FM) relevant by using the most recent data. The company wants to implement a model training strategy that includes regular updates to the FM.

Which solution meets these requirements?

- **A. Batch learning**
- B. Continuous pre-training
- C. Latent training
- D. Static training

Antwort: A

204. Frage

A financial company is developing a fraud detection system that flags potential fraud cases in credit card transactions. Employees will evaluate the flagged fraud cases. The company wants to minimize the amount of time the employees spend reviewing flagged fraud cases that are not actually fraudulent.

Which evaluation metric meets these requirements?

- A. Accuracy
- B. Lift chart
- **C. Precision**
- D. Recall

Antwort: C

Begründung:

Precision is the metric that measures the proportion of true positives (actual frauds) among all flagged positives (flagged frauds). High precision ensures that most of the flagged cases are truly fraudulent, minimizing the number of false positives employees must review.

* C is correct:

"Precision is the ratio of true positives to all predicted positives, and it answers: 'Of all the cases flagged as fraud, how many were actually fraud?' High precision means fewer non-fraudulent cases are sent for manual review." (Reference: AWS ML Concepts - Precision and Recall, AWS Certified AI Practitioner Study Guide)

* A (Recall) measures how many actual frauds are caught, but does not minimize false positives.

* B (Accuracy) can be misleading in imbalanced datasets (like fraud detection).

205. Frage

.....

Nun ist die Amazon AIF-C01 Zertifizierungsprüfung eine beliebte Prüfung in der IT-Branche. Viele IT-Fachleute wollen das Amazon AIF-C01 Zertifikat erhalten. So ist die Amazon AIF-C01 Zertifizierungsprüfung eine beliebte Prüfung. Das Amazon AIF-C01 Zertifikat ist sehr hilfreich, um Ihre Arbeit in der IT-Industrie zu verbessern und Ihr Gehalt zu erhöhen und Ihrem Leben eine zuverlässige Garantie zu geben.
