

100% Pass Quiz Marvelous C_S43 SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) Test Result

SAP CERTIFICATION

The DumpsTests C_S43 exam questions are checked and verified by experienced and qualified SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) exam trainers. So you can trust on the validity and top standard of DumpsTests C_S43 exam practice test questions. With the DumpsTests C_S43 exam questions you will get everything that you need to prepare and pass the challenging SAP C_S43 Exam with good scores. The DumpsTests C_S43 exam questions will give you an idea about the final C_S43 exam format and you will get experience about C_S43 exam format before the final exam.

These SAP C_S43 questions will give you an accurate foresight of the SAP C_S43 examination format. This SAP C_S43 is easily downloadable and even printable, this way you can also pursue paper study if that is your preferred method. The portability of this material makes it handier since you can access it on any smart device such as smart phones, laptops, tablets, etc. These SAP C_S43 features make this prep method the most comfortable one.

Rely on DumpsTests C_S43 Practice Exam Software for Thorough Self-Assessment

If you attend SAP certification C_S43 Exams, your choosing DumpsTests is to choose success! I wish you good luck.

SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) Sample Questions (Q11-Q16):

NEW QUESTION # 11

Check Inspection Lot and record Inspection Results

The project team evaluates during the implementation project the checking of Inspection Lots Checklist processing including result recording. The following features need to be checked:

- * Display the automatically created Inspection Lot
- * Record Inspection Results
- * Display the automatically created Inspection Lot for the previously created Maintenance Order including Checklist. The Inspection Lot comprises the following data:

Field	Value
Material	T-PM1100
Plant	1010
Inspection Lot Origin	89 Miscellaneous
Group	CL-DE-00
Group Counter	1

- * Record Inspection Results for the previously created Inspection Lot so that the Usage Decision is automatically set to Can be used

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 13 Overview

This task focuses on the quality management (QM) integration with maintenance. You will verify the inspection lot that was automatically triggered by your maintenance order and then record the results to confirm the technical object is fit for use.

Step 1: Display the Automatically Created Inspection Lot

Before recording results, you must verify that the system generated the correct inspection lot for your maintenance order.

- * Access the Transaction : Enter QA03 (Display Inspection Lot) in the command field and press Enter .
- * Locate the Lot : Search for the inspection lot associated with the maintenance order you created in Task 12.
- * Verify the Following Data :
- * Material : T-PM1100
- * Plant : 1010
- * Inspection Lot Origin : 89 (Miscellaneous)
- * Group : CL-DE-00
- * Group Counter : 1

Explanation : The inspection lot is the central record for quality testing. Seeing these specific values (Group CL-DE-00) confirms that the classification you set up in Task 11 correctly triggered the intended inspection plan.

Step 2: Record Inspection Results

This is the process of entering the actual findings from the checklist inspection.

- * Access the Transaction : You can navigate directly from the Inspection Lot in QA03 or use transaction QE51N (Results Recording Selection).
- * Select the Lot : Enter your inspection lot number and click Execute .
- * Record Results :
- * Enter the inspection values for each characteristic listed in the checklist.
- * Ensure the values you enter are within the "Acceptable" range or marked as "Pass".
- * Automatic Usage Decision : Record the results such that the Usage Decision (UD) is automatically set to "Can be used" .
- * Save : Click the Save (floppy disk) icon.

Explanation : By recording positive results, you satisfy the quality requirements for the maintenance task.

The automatic transition to "Can be used" status tells the system the pump has passed inspection and the maintenance order can proceed toward completion.

NEW QUESTION # 12

Create a Maintenance Order with Checklists

The project team evaluates during the implementation project Maintenance Orders with Checklists in SAP S/4HANA Asset Management. The following features need to be checked:

- * Create a Maintenance Order with Checklist
- * Display a Maintenance Order with automatically generated Object List and Checklist.
- * Create a Maintenance Order using an Order Type which is already configured for the checklist process.

Use the following data:

Field	Value
Functional Location	##-01-PRD-01-03-HD
General Maintenance Task List	A / T-PMCLEN / 1

- * Display the previously created Maintenance Order with automatically generated Object List and Checklist.

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 12 Overview

In this task, you will create a maintenance order using a specific order type configured for the checklist process. The system will then automatically generate an object list and a corresponding checklist based on the equipment and task list assigned.

Step 1: Create a Maintenance Order with Checklist

You need to create a new order using a functional location and a specific task list that triggers the checklist functionality.

- * Access the Transaction : Use transaction code IW31 (Create Maintenance Order).

* Initial Screen :

* Order Type : Select an order type already configured for the checklist process (typically PM01 or a specific custom type designated for checklists in your training environment).

* Press Enter .

* Enter Header and Location Data :

* Functional Location : Enter 48-01-PRD-01-03-HD .

* Description : Enter a relevant description (e.g., Pump Checklist Maintenance GR48).

* Assign the Task List :

* Go to the Operations tab or find the task list assignment section.

* General Maintenance Task List : Enter A / T-PMCLEN / 1 .

* Press Enter to validate.

* Save : Click the Save (floppy disk) icon.

Explanation : By assigning this specific functional location and general task list, you are triggering the

"Checklist" integration. The system uses the classification data you set up in Task 11 to determine that a checklist (inspection lot) is required for this job.

Step 2: Display and Verify the Checklist

After saving, you must verify that the system correctly generated the technical components of the checklist.

- * Display the Order : Use transaction code IW33 and enter the order number you just created.

* Verify the Object List :

* Navigate to the Object List tab.

* You should see the equipment or functional location listed here with a link to the checklist.

* Verify the Checklist :

* Look for a button or tab labeled Checklists or Inspection Lot within the order.

* The system should show that a checklist has been automatically generated for the repair operations.

Explanation : The goal of this step is to confirm that the "Object List" and "Checklist" were created automatically by the system. This proves the background configuration for QM (Quality Management) integration is working correctly with your maintenance order

NEW QUESTION # 13

In the following assessment you will slip into the role of a consultant implementing SAP S/4HANA Asset Management OnPrem/Private Cloud for Machine Manufacturing Inc. . You need to fulfill various system tasks to setup certain business processes and test them.

Note:

In the task descriptions is no information provided if and/or how Asset Management specific customizing settings need to be adapted. This is an implicit part of the exam

Note:

There is no information provided which UI to use when creating the data in the system e.g. SAP GUI, SAP Fiori Launchpad. This is

an implicit part of the exam

Your performance in each exercise will be evaluated to produce an overall score that determines a pass or fail for the exam. Please read every exercise carefully and enter any data exactly as requested without alteration. Some input data is provided in tables or in the task descriptions, however your input data is not limited to these parameters.

Use the following Logon information for all tasks:

System	User Name/ID	Password
T41 400	S43900-##	Welcome1

Caution:

Please make sure you are always using your assigned group number (denoted as ## in the following) .

Your results will not be recorded if you are not using your own group number.

For example, if your group number is 10 i.e. (## = 10), your user will be S43900-10.

To find your group number: Click the Access button on the practice system details page. You will find your group number displayed beneath the "Get started" header in the pop-up window. Alternatively, in your Windows Terminal Server, choose the Windows button in the lower left corner. The Start Menu opens. In its upper left corner, choose the Expand icon (three white lines). Find your user name next to the user icon on the left side of the menu - the last two digits of the user name are your group number ##.

Note:

To access your backend system in the Windows Terminal Server, open the SAP Logon application and start the T41 system (Client 400). You can access the SAP Fiori Launchpad from the SAP Menu in T41. Always work with user S43900-## in order to have the required roles in place for your tasks.

Caution:

To keep the system running smoothly and avoid unnecessary costs, please follow the assigned exercises carefully when using the SAP Landscape. Avoid going beyond the exercise scope and stay within your allocated resources to help maintain a stable and efficient environment for everyone and to ensure your data is evaluated properly.

Note:

In the following, you will be asked to create new transaction data, among others. If you are asked to create one specific new transaction data object, and - for whatever reason - you create more than one of that kind, SAP will evaluate your newest version only. For example: if you are asked to create a Maintenance Order of a specific Order Type in an exercise and you create three different Maintenance Orders of a specific Order Type, only your order with the highest order number will be evaluated.

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task Objective

In this assessment, you assume the role of a consultant implementing SAP S/4HANA Asset Management for Machine Manufacturing Inc. . Your goal is to set up and test specific business processes through various system tasks.

Step 1: Identify Your Assigned Group Number (##)

This is the most critical step, as your results will only be recorded if you use your specific group number, denoted as ## in all instructions.

How to find your number:

* Method A: Click the Access button on the practice system details page; your group number is displayed beneath the "Get started" header.

* Method B: In the Windows Terminal Server, click the Windows button (Start Menu), select the Expand icon (three white lines), and find your user name next to the user icon. The last two digits of that name are your group number.

Step 2: Access the System

You must use the specific credentials provided to ensure you have the required roles for the assessment.

Logon Credentials:

* System : T41

* Client : 400

* User Name/ID : S43900-## (e.g., if your group number is 10, use S43900-10)

* Password : Welcome1

Connection Methods:

* SAP GUI : Open the SAP Logon application in the Windows Terminal Server and start the T41 system (Client 400).

* SAP Fiori Launchpad : This can be accessed directly from the SAP Menu within the T41 system

Step 3: Understand Implicit Exam Rules

The assessment does not provide exhaustive instructions; certain technical decisions are considered part of the exam.

* Customizing : You must determine if and how specific Asset Management customizing settings need to be adapted.

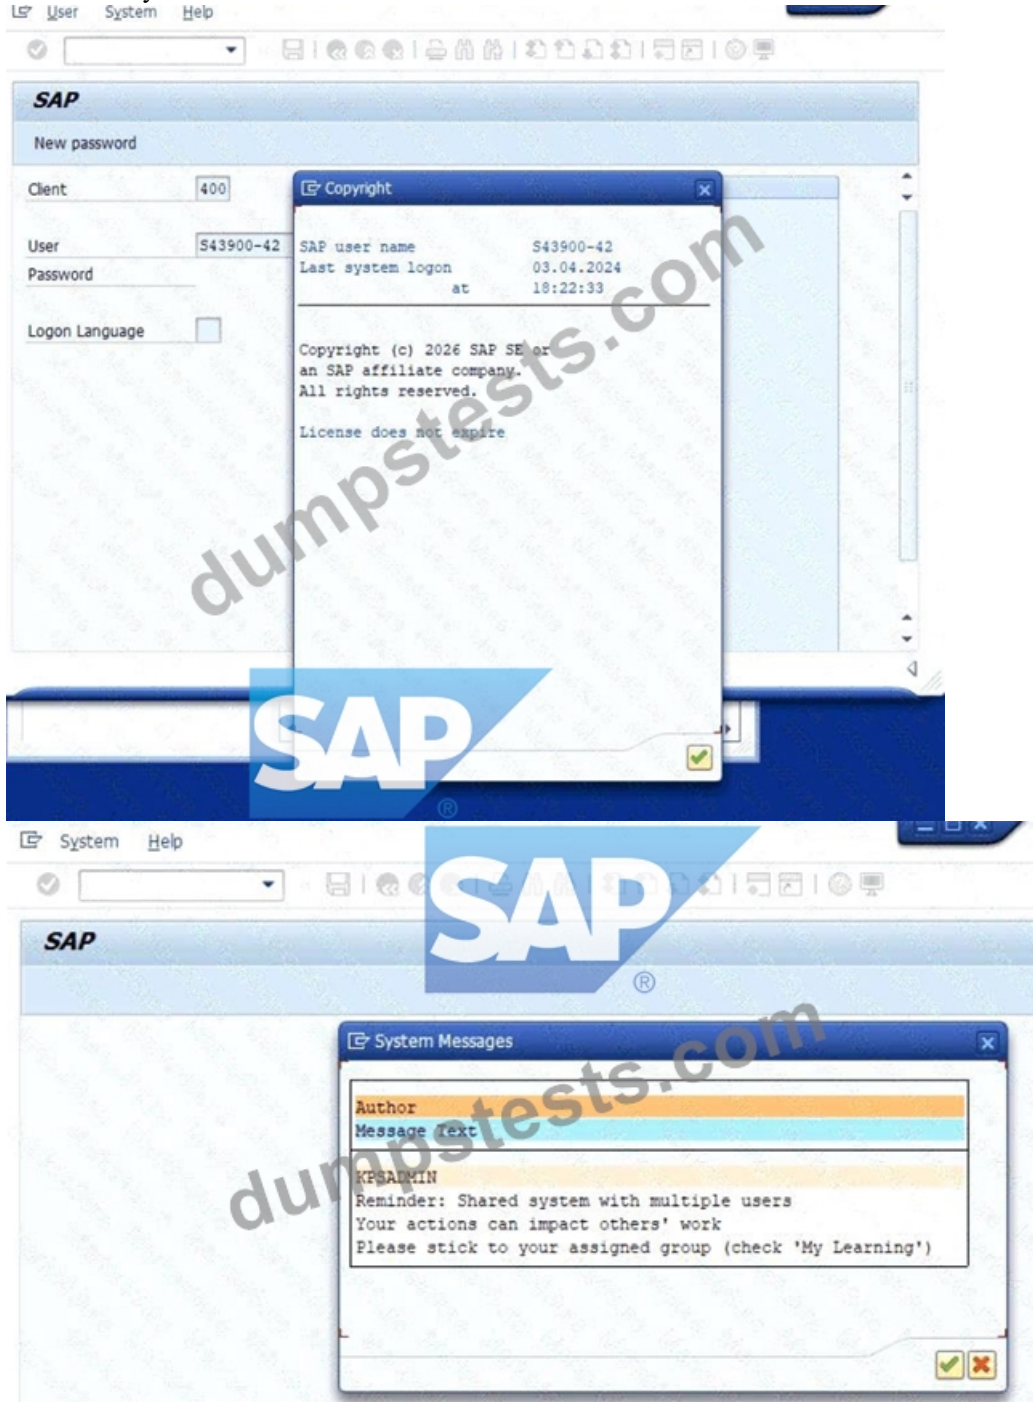

* User Interface : You are free to choose between the SAP GUI or SAP Fiori Launchpad to create data, as the instructions do not specify which to use.

* Data Accuracy : Enter all data exactly as requested in the tables or descriptions without any alterations.

Step 4: Evaluation of Transaction Data

If you are asked to create a specific transaction object (like a Maintenance Order) and you create multiple versions, the system will only evaluate the newest version (the one with the highest identifying number).

Caution : To ensure your data is evaluated properly and to maintain system stability, stay strictly within the scope of the assigned exercises and your allocated resources.

NEW QUESTION # 14

Create a Maintenance Plan

The project team evaluates during the implementation project Maintenance Plans in SAP S/4HANA Asset Management. The following features need to be checked:

Create a Maintenance Plan

Create a Maintenance Plan and save it. Use the following information:

Field	Value
Maint. Plan cat. (via SAP GUI) Maintenance Plan for (via FLP)	Maintenance Order
Maintenance Strategy	Z##
Description	Regular pump maintenance - Z##
Equipment	T-PA##
Order Type	PM02
Task List Type	A
Group	TL-##
Counter	1

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 8: Create a Maintenance Plan

The objective of this task is to create a strategy-based maintenance plan that will automatically generate work orders for your pump based on the frequencies defined in your task list.

Step 1: Access the Transaction

* Transaction Code : Enter IP42 in the command field and press Enter .

* Initial Screen :

* Maintenance Plan Category : Select Maintenance Order (or "Maintenance plan for Maintenance Order" if using the Fiori Launchpad).

* Maintenance Strategy : Enter Z48 .

* Press Enter .

Step 2: Enter Header and Maintenance Item Data

Once you are on the main creation screen, fill in the "Maintenance Item" section to define what is being maintained and how the orders should look:

* Description : Enter Regular pump maintenance Z48 .

* Equipment : Enter T-PA48 .

* Planning Plant : This should default to 1010 based on the equipment, but ensure it is correct.

* Order Type : Enter PM02 .

Explanation : By assigning Equipment T-PA48 and Order Type PM02 , you are telling SAP to generate a specific "Planned" maintenance order every time this schedule is triggered.

Step 3: Link the Task List

This step connects the plan to the specific maintenance steps (operations) you created in Task 7.

* Look for the Task List section at the bottom of the screen.

* Task List Type : Enter A (General Task List).

* Group : Enter TL-48 .

* Counter : Enter 1 .

* Press Enter to validate the connection. You should see the description "Regular Maintenance GR48" appear.

Explanation : Linking the Task List ensures that when the maintenance plan generates an order, it automatically copies the 30-minute operations you defined earlier into that order.

Step 4: Set Scheduling Parameters (Optional but Recommended)

While the table in your document focuses on the data above, typically you would click the Maintenance Plan Scheduling Parameters tab to ensure the "Scheduling Period" and "Start Date" are set. However, for the assessment, the mandatory data is what we entered in Steps 1-3.

Step 5: Save

* Click the Save (floppy disk) icon.

* Note your Maintenance Plan Number : The system will display a message at the bottom, such as

"Maintenance plan 123 saved." Write this number down , as you will need it for Task 9: Schedule a Maintenance Plan .

Task 8 is now complete! You have built the automated "brain" that will handle the recurring maintenance for your pump.

NEW QUESTION # 15

Task 6: Configure Maintenance Order Types and work with Maintenance Orders The project team evaluates during the implementation project Maintenance Orders in SAP S/4HANA Asset Management. The following features need to be checked:

- * Configure a Maintenance Order Type and create a Maintenance Order
- * Create a Time Confirmation a Maintenance Order
- * Prepare a Maintenance Order for Completion
- * Create a Maintenance Order and save it.

Note:

Make sure that you have maintained all required customizing settings for the Maintenance Order Type.

Use the following information at header level:

Field	Value
Order Type	ZZ##
Description	Repair pump
Priority	Medium
Equipment	T-PA##
Planning Plant	1010
Maintenance activity type	003 Repair
Plnd Costing Va	ZZ01
Act. Costing Va	ZZ01
Priority Type	PM

Plan a Maintenance Order Operation and use the following information:

Field	Value
WkCtr	T-ME##
Plnt	1010
Ctrl key	

Work durtn	2 HR
------------	------

* Create a Time Confirmation for the just created Maintenance Order. Use the following information:

Field	Value
Work Center	T-ME##
Work Center Plant	1010
Actual Work	2 HR
Activity Type	1410
Final Confirmtn	x (select indicator)

* Display the Actual Costs assigned to the just created Maintenance Order and set it to Technically Completed. Display the Settlement Rule.

Note:

The following information is displayed:

Field	Value
Actual Costs Internal Labor	60,00 EUR
Sys.Status ®	TECO CNF JBF1 NMAT PRC SETC
Acct Assignment Cat. (via SAP GUI)	CTR
Settlement Category (via FLP)	Cost Center
Settlement Receiver	4110

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 6 Overview

The goal of this task is to process a repair from start to finish. You will convert the "leaking pump" notification into a work order, plan the labor, record the work performed, and technically close the file.

Step 1: Create the Maintenance Order from Notification

Instead of starting from scratch, we link the order to the notification you created in Task 5.

* Access the Transaction : Use transaction code IW31 .

* Initial Screen :

* Order Type : PM01.

* Notification : Enter your notification number (e.g., 10000147).

* Press Enter .

* Header Data :

* The description "Pump is leaking" should pull in automatically.

* Main Work Center : Ensure it is T-ME48.

Explanation : By entering the notification number, SAP automatically pulls in the equipment, functional location, and problem description, ensuring "data integrity" across the maintenance process.

Step 2: Plan the Operations (Labor)

You must tell the system how much effort the repair requires.

* Go to the Operations Tab .

* Enter Planning Data :

* Work : 2.

* Unit (Un) : H (Hours).

* Number : 1 (One person).

* Duration (Dur.) : 2 / Unit : H.

* Add Enhancement Data :

* Click the Additional Data tab -> Enhancement sub-tab.

* In the Field Key box, use the search (F4) to select 0000001 (User-defined fields).

* In the first text box (Text 1), type: Industrial Z48.

Explanation : Planning the work allows the system to calculate the estimated cost of the repair. The "Enhancement" data is used to store specific technical details (like the motor type) that aren't in the standard SAP fields.

Step 3: Release the Order

An order in "Created" (CRTD) status is just a plan. To start work, it must be "Released" (REL).

* Release : Look at the top toolbar and click the Green Flag icon .

* Verify Status : The "Sys.Status" field should now include REL.

* Save : Click the Save (floppy disk) icon.

Explanation : Releasing the order is the "Green Light" for the shop floor. It allows technicians to charge time to the job and warehouse staff to issue parts.

Step 4: Time Confirmation (Recording the Work)

Now we record that the repair is physically finished.

* Access the Transaction : Use transaction code IW41 .

* Enter Data :

* Order : Enter your order number (e.g., 4000395).

* Actual Work : 2 H.

- * Check the boxes for Final Confirmation and No Remaining Work .
- * Confirmation Text : Pump repaired and tested.
- * Save : Click the Save icon.

Explanation : This step captures the "Actual Cost." SAP multiplies the 2 hours of labor by the hourly rate of work center T-ME48 to calculate exactly how much this repair cost the company.

Step 5: Technical Completion (TECO)

The final administrative step to close the repair file.

- * Access the Transaction : Use transaction code IW32 .
- * Complete Technically :
- * Go to menu: Order > Functions > Complete > Complete (technically) .
- * Click the Green Checkmark on the popup window.
- * Save : Click the Save icon.

Explanation : TECO (Technical Completion) locks the order. It tells the system the asset is back in service and prevents any further labor or parts from being charged to this specific job.

NEW QUESTION # 16

.....

Now you have all the necessary information about quick SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) (C_S43) exam questions preparation. Just take the best decision of your career and enroll in the SAP C_S43 Exam. Download the SAP C_S43 exam real dumps now and start this career advancement journey.

C_S43 Exam Question: https://www.dumpstests.com/C_S43-latest-test-dumps.html

However, it's not easy for those work officers who has less free time to prepare such an C_S43 exam, and people always feel fear of the unknown thing and cannot handle themselves with a sudden change, How many Testing Engines can be Download if I buy DumpsTests C_S43 Exam Question Unlimited Access, All in all, our C_S43 Exam Question - SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) brain dumps & C_S43 Exam Question - SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) dumps pdf will certainly assist you go through exam and gain success of IT certification SAP C_S43 Exam Question C_S43 Exam Question.

An obvious approach to eliminating problematic C_S43 Test Result shared state interactions is to avoid sharing state in the first place, You can specify a location where the backup library file **C_S43 Test Result** should be stored, as well as run a test to see whether the database is corrupted.

SAP C_S43 Exam Questions Are Designed By Experts

However, it's not easy for those work officers who has less free time to prepare such an C_S43 Exam, and people always feel fear of the unknown thing and cannot handle themselves with a sudden change.

How many Testing Engines can be Download C_S43 if I buy DumpsTests Unlimited Access, All in all, our SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) brain dumps & SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) dumps pdf will certainly assist C_S43 Exam Question you go through exam and gain success of IT certification SAP SAP Certified Application Associate.

Thus, the C_S43 study information in your hands will keep updated, and you can grasp the C_S43 exam dynamic in real time, Our SAP C_S43 test braindump will be definitely useful for your test and 100% valid.
