

2026 Trustable AZ-305: New Designing Microsoft Azure Infrastructure Solutions Test Preparation

P.S. Free & New AZ-305 dumps are available on Google Drive shared by Lead2Passed: https://drive.google.com/open?id=1ZNUTtuPnCYvEzX0e2pXhOSf6UAMYj_Jr

If you want to get certified, you should use the most recent Microsoft AZ-305 practice test. These Real AZ-305 Questions might assist you in passing this difficult test quickly because of how busy life routine is. Stop wasting more time. With real Microsoft AZ-305 Dumps PDF, desktop practice test software, and a web-based practice test, Lead2Passed is here to help.

In order to meet the needs of all customers that pass their exam and get related certification, the experts of our company have designed the updating system for all customers. Our AZ-305 exam question will be constantly updated every day. Maybe most of people prefer to use the computer when they are study, but we have to admit that many people want to learn buy the paper, because they think that studying on the computer too much does harm to their eyes. AZ-305 Test Questions have the function of supporting printing in order to meet the need of customers.

>> New AZ-305 Test Preparation <<

Reasonable AZ-305 Exam Price & Top AZ-305 Exam Dumps

We will give you free update for 365 days after purchasing AZ-305 study guide from us, that is to say, in the following year, you don't need to spend extra money on update version, and the latest version for AZ-305 exam dumps will be sent to your email address automatically. Furthermore, AZ-305 exam dumps are high quality and accuracy, and they can help you pass the exam just one time. In order to strengthen your confidence to AZ-305 Study Guide, we are pass guarantee and money back guarantee, if you fail to pass the exam we will give you full refund, and there is no need for you to worry about that you will waste your money.

Microsoft AZ-305 Exam consists of 40-60 multiple-choice questions, and the duration of the exam is 150 minutes. AZ-305 exam can be taken online or at a testing center, and the cost of the exam is \$165. To pass the exam, candidates must score at least 700 out of 1000. Microsoft recommends that candidates have at least one year of experience in designing and implementing Azure solutions before taking the exam.

Microsoft Designing Microsoft Azure Infrastructure Solutions Sample Questions (Q390-Q395):

NEW QUESTION # 390

You are developing an app that will use Azure Functions to process Azure Event Hubs events. Request processing is estimated to take between five and 20 minutes. You need to recommend a hosting solution that meets the following requirements:

- * Supports estimates of request processing runtimes
- * Supports event-driven autoscaling for the app

Which hosting plan should you recommend?

- A. Premium
- B. Dedicated
- **C. App Service**
- D. Consumption

Answer: C

NEW QUESTION # 391

Your company currently has an application that is hosted on their on-premises environment. The application currently connects to two databases in the on-premises environment. The databases are named whizlabdb1 and whizlabdb2.

You have to move the databases onto Azure. The databases have to support server-side transactions across both of the databases.

Solution: You decide to deploy the databases to an Azure SQL database-managed instance.

Would this fulfill the requirement?

- **A. Yes**
- B. No

Answer: A

NEW QUESTION # 392

You have several Azure App Service web apps that use Azure Key Vault to store data encryption keys. Several departments have the following requests to support the web app:

Department	Request
Security	• Review the membership of administrative roles and require users to provide a justification for continued membership. • Get alerts about changes in administrator assignments. • See a history of administrator activation, including which changes administrators made to Azure resources.
Development	• Enable the applications to access Key Vault and retrieve keys for use in code.

Which service should you recommend for each department's request? To answer, configure the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Security: Azure AD Privileged Identity Management
 : Azure AD Privileged Identity Management
 : Azure Managed Identity
 : Azure AD Connect
 : Azure AD Identity Protection

Development: Azure Managed Identity
 : Azure AD Privileged Identity Management
 : Azure Managed Identity
 : Azure AD Connect
 : Azure AD Identity Protection

Quality Assurance: Azure AD Privileged Identity Management
 : Azure AD Privileged Identity Management
 : Azure Managed Identity
 : Azure AD Connect
 : Azure AD Identity Protection

Answer:

Explanation:

Answer Area

Security: Azure AD Privileged Identity Management
 : Azure AD Privileged Identity Management
 : Azure Managed Identity
 : Azure AD Connect
 : Azure AD Identity Protection

Development: Azure Managed Identity
 : Azure AD Privileged Identity Management
 : Azure Managed Identity
 : Azure AD Connect
 : Azure AD Identity Protection

Quality Assurance: Azure AD Privileged Identity Management
 : Azure AD Privileged Identity Management
 : Azure Managed Identity
 : Azure AD Connect
 : Azure AD Identity Protection

NEW QUESTION # 393

A company uses Azure SQL Managed Instance for the application data.

What two parameters would you set up to ensure that the instance will scale to meet the workload demands?

- A. Define the maximum of the resources per database
- B. Define the maximum resource limit per group of databases
- C. Define the maximum of the allocated storage
- D. Define the maximum of CPU cores

Answer: C,D

Explanation:

Azure provides dynamic scalability for the Azure SQL Databases and Azure Managed Instances.

Azure SQL Database service offers two purchasing models: DTU-based and vCore-based. Azure Managed instance service is based only on the vCore purchasing model. This model allows you to select two scalability parameters for managed instance: the maximum CPU cores and the maximum allocated storage.

(Number 1): When you create a SQL Managed instance or change the resources for an existing instance, you use the Compute + storage panel.

(Number 2): Because Azure SQL Managed Instance uses only the vCore model, you need to select one of the model's Service tier options, General Purpose and Business Critical. These tiers define the storage latency: fast or super fast.

Then, using sliders, you set or change the instance resources: the number of vCores (Number 3) and the storage size (Number 4). The default values are 8 CPU cores and 256 GB of storage. Azure SQL Managed Instance service will dynamically scale within these parameters to meet the workload demands. All databases in the Azure SQL Managed instance will share the assigned resources.

Microsoft Azure Search resources, services, and docs (G+)

Dashboard > SQL managed instances > Create Azure SQL Database Managed Instance >

Compute + storage SQL managed instance

Feedback

Service tier

Select from the latest vCore service tiers available for Azure SQL Managed Instance including General Purpose and Business Critical. [Learn more](#)

Service tier

- ☒ General Purpose (4-80 vCores, 32 GB-16 TB storage capacity, Fast storage) - for most production workloads
- ☐ Business Critical (4-80 vCores, 32 GB-4 TB storage capacity, Super fast storage) - for IO-intensive and compute-intensive workloads

Compute Hardware

Configure compute hardware that will run your Azure SQL Managed Instance. [Learn more](#)

Hardware generation

- ☒ Gen5

vCores

Storage in GB

Azure Hybrid Benefit

☐ I already have a SQL Server License.

Backup

Backup storage, up to the same amount of 256 GB as data storage, is provided free of charge. Consuming backup storage above this amount is billed per usage. Geo-restore is only available when geo-redundant backup storage is selected. [Learn more](#)

Backup storage redundancy

- ☒ Geo-redundant backup storage
- ☐ Locally-redundant backup storage

Cost summary

Gen5 GeneralPurpose	
Cost per vCore (in USD)	198.94
vCores selected	x 8
Azure Hybrid Benefit discount (in USD)	- 0.00
Cost per GB (in USD)	0.14
Max storage selected (in GB)	x 256
32 GB storage included (in USD)	- 4.48
ESTIMATED COST / MONTH	1622.88 USD

Additional charge per usage
See [pricing details](#) for more detail.

Backup storage redundancy is applied for both PITR and LTR backups. Redundancy is set during managed instance creation and can't be changed.

Option C is incorrect because you need to define a maximum of the resources per database to scale Azure SQL Database for both purchasing models dynamically but not for the Azure SQL Managed Instance scaling.

Option D is incorrect because you need to define a resource limit per group of databases to scale Azure SQL Database Elastic pools dynamically but not for the Azure SQL Managed Instance scaling.

NEW QUESTION # 394

Hotspot Question

You have two on-premises Microsoft SQL Server 2017 instances that host an Always On availability group named AG1. AG1 contains a single database named DB1.

You have an Azure subscription that contains a virtual machine named VM1. VM1 runs Linux and contains a SQL Server 2019 instance.

You need to migrate DB1 to VM1. The solution must minimize downtime on DB1.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Prepare for the migration by:

Adding a secondary replica to AG1
Creating an Always On availability group on VM1
Upgrading the on-premises SQL Server instances

Perform the migration by using:

A distributed availability group
Azure Migrate
Log shipping

Answer:

Explanation:

Prepare for the migration by:

Adding a secondary replica to AG1
Creating an Always On availability group on VM1
Upgrading the on-premises SQL Server instances

Perform the migration by using:

A distributed availability group
Azure Migrate
Log shipping

Explanation:

Creating an Always On availability group on VM1 would not be necessary, as you already have an availability group (AG1) in place on your on-premises SQL Server instances.

By adding a secondary replica to AG1, you can provide a copy of DB1 that can be used for the migration. This will allow you to minimize downtime on DB1 by performing the migration on the secondary replica, while the primary replica remains available for use.

While using Azure Migration can simplify the migration process, it may not necessarily minimize downtime. You may still need to plan for an appropriate maintenance window to complete the migration with minimal disruption to your application.

NEW QUESTION # 395

.....

Lead2Passed guarantee the best valid and high quality AZ-305 study guide which you won't find any better one available. AZ-305 training pdf will be the right study reference if you want to be 100% sure pass and get satisfying results. From our AZ-305 free demo which allows you free download, you can see the validity of the questions and format of the AZ-305 actual test. In addition, the price of the AZ-305 dumps pdf is reasonable and affordable for all of you.
