The prep material created by the Prep4pass are the best choice because we provide you with NCLEX NCLEX-RN exam preparation material in 3 different formats. This is helpful for you since every candidate has a different study style and the diversity of National Council Licensure Examination(NCLEX-RN) (NCLEX-RN) exam preparation formats can aid the study pattern.

The National Council Licensure Examination (NCLEX-RN) is a standardized test that determines if an individual is eligible to become a registered nurse in the United States. It is the mandatory exam that needs to be passed by all aspiring nurses who want to earn their nursing license. NCLEX-RN exam evaluates the individual's competencies to ensure they have the necessary skills and knowledge to safely and effectively practice nursing as an RN.

NCLEX-RN exam is administered by the National Council of State Boards of Nursing (NCSBN) and is computer-adaptive, meaning that the difficulty level of the questions adapts to the test-taker's ability level. NCLEX-RN Exam consists of multiple-choice questions and alternate format questions, such as select-all-that-apply and ordered response questions. NCLEX-RN exam is structured to test the candidate's knowledge and skills across a range of nursing practice areas, including pharmacology, safety, health promotion, and disease prevention.

NCLEX-RN Reliable Cram Materials | NCLEX-RN Latest Exam Questions

Our National Council Licensure Examination(NCLEX-RN) (NCLEX-RN) questions PDF version is great for busy candidates who like to learn on the go with their smartphones or tablets. The National Council Licensure Examination(NCLEX-RN) (NCLEX-RN) dumps PDF format's portability making it ideal for on-the-go studying from any smart device. Studying in PDF format is convenient since it can be printed out and used as a hard copy if you do not have access to a smart device at the moment.

NCLEX-RN (National Council Licensure Examination for Registered Nurses) is a standardized exam that is used to determine whether or not an individual is ready to begin practicing as a registered nurse. NCLEX-RN exam is a crucial step for all aspiring nurses, as it is the final hurdle standing between them and their dream careers. The NCLEX-RN Exam is designed to test the knowledge, skills, and abilities that are required for safe and effective nursing practice, and is used by all state boards of nursing in the United States to grant licensure to new nurses.

NCLEX National Council Licensure Examination(NCLEX-RN) Sample Questions (Q21-Q26):

NEW QUESTION # 21

A 19-year-old client fell off a ladder approximately 3 ft to the ground. He did not lose consciousness but was taken to the emergency department by a friend to have a scalp laceration sutured. The nurse instructs the client to:

- A. Clean the sutured laceration twice a day with povidone- iodine (Betadine)
- B. Remove his scalp sutures after 5 days
- C. Return to the hospital immediately if he develops confusion, nausea, or vomiting
- D. Take meperidine 50 mg po q4-6h prn for headache

Answer: C

Explanation:

Explanation

(A) Povidone-iodine is very irritating to skin and should not be routinely used. (B) Sutures should not be removed by the client. (C) Confusion, nausea, vomiting, and behavioral changes may indicate increasing intracranial pressure as a result of intracerebral bleeding. (D) Use of a narcotic opiate such as meperidine is not recommended in clients with a possible head injury because it may produce sedation, pupil changes, euphoria, and respiratory depression, which may mask the signs of increasing intracranial pressure.

NEW QUESTION # 22

A 24-year-old graduate student recognizes that he has a phobia. He suffers severe anxiety when he is in darkness. It has altered his lifestyle because he is unable to go to a movie theater, concert, and other events that may require absence of light. The client is seeking assistance because he is no longer able to socialize with friends due to his phobia. The psychologist working with him is using desensitization. He has asked the nursing staff to assist the client in muscle relaxation techniques. What result would indicate client education has been successful?

- A. He enters a concert, but as the lights dim, he does not experience anxiety.
- B. He enters a movie theater, sits in his chair, and replaces anxiety with relaxation as the theater darkens.
- C. He takes a part-time job as a photographic assistant. His job necessitates his working in a darkroom.
- D. He states that he no longer fears dark places.

Answer: B

Explanation:

Explanation/Reference:

Explanation:

(A) This situation provides specific evidence that the client is able to integrate muscle relaxation technique into his lifestyle to alleviate anxiety. (B) The client may not experience anxiety at the concert, but there is no evidence regarding the technique that he used to alleviate anxiety. (C) The client may state he no longer experiences anxiety, but there is no evidence demonstrating this. He may be denying anxiety to discontinue therapy prematurely. (D) Does he experience anxiety in the darkroom? He may have taken this job to force himself to deal with the phobia directly.

NEW QUESTION # 23

The nurse who is caring for a client with pneumonia assesses that the client has become increasingly irritable and restless. The nurse realizes that this is a result of:

- A. The client's maintaining a semi-Fowler position
- B. IV fluids of 2.5-3 liters in 24 hours
- C. Cerebral hypoxia
- D. Prolonged bed rest

Answer: C

Explanation:

Section: Questions Set D

Explanation:

(A) Maintaining bed rest helps to decrease the O₂ needs of the tissues, which decreases dyspnea and workload on the respiratory system. (B) The semi-Fowler or high-Fowler position is necessary to aid in lessening pressure on the diaphragm from the abdominal organs, which facilitates comfort and easier breathing patterns. (C) Cerebral hypoxia causes the client with pneumonia to be increasingly irritable and restless and results from the client not obtaining enough O₂ to meet metabolic needs. (D) Proper hydration facilitates liquefaction of mucus trapped in the bronchioles and alveoli and enhances expectoration. Unless contraindicated, a reasonable amount of IV fluids to be administered is at least 2.5-3 liters in a 24-hour period.

NEW QUESTION # 24

A client is being discharged from the hospital today. The discharge teaching for care of her colostomy included which of the following basic principles for protecting the skin around her stoma:

- A. Using a skin sealant under pouch adhesives
- B. Cutting the skin barrier 1/2 inches larger than the stoma
- C. Changing the pouch only when leakage occurs
- D. Taping a pouch that is leaking

Answer: A

Explanation:

Explanation

(A) When a pouch seal leaks, the pouch should be immediately changed, not taped. Stool held against the skin can quickly result in severe irritation. (B) The skin barrier should be cut only slightly larger than the stoma (one-half inch). (C) The client should be taught to change pouches whenever possible before leakage occurs.

(D) When skin sealant is used under the tape, the outermost layer of the epidermis remains intact. When no skin sealant is used, this layer is removed when the tape is removed.

NEW QUESTION # 25

A client has been uncomfortable in crowds all her life. After the birth of her child, she has been housebound unless her husband can accompany her to the grocery store and for medical appointments.

His schedule will not allow for this, and he has insisted that she must be more independent. Her anxiety has increased to the point of panic. The client has been diagnosed with agoraphobia. Which statement is true about this disorder?

- A. The fears are persistent, and avoidance is used as the coping mechanism.
- B. Agoraphobia moves into remission when treated with chlorpromazine.
- C. The behavior is not considered disabling.
- D. More men suffer from agoraphobia than women.

Answer: A

Explanation:

Explanation/Reference:

Explanation:

(A) Agoraphobia is the most pervasive and serious phobic disorder. (B) Women compose 70%-85% of agoraphobia sufferers. (C) Agoraphobia is an acute disorder that immobilizes the sufferer with extreme anxiety. (D) Chlorpromazine is not a drug used to treat phobias.
