If you want to gain the related certification, it is very necessary that you are bound to spend some time on carefully preparing for the Salesforce exam, including choosing the convenient and practical study materials, sticking to study and keep an optimistic attitude and so on.

Salesforce Certified OmniStudio Developer Sample Questions (Q19-Q24):

NEW QUESTION # 19

A developer needs to create . DataRaptor to retrieve the name of an account for a contact.
Following best practices, how should a developer configure the extraction steps?

- A. Define extraction steps for the Contact and the Account objects, and set the Extract JSON Path to Contact Account.Name
- B. Define an extraction step for the Account object, and set the Extract JSON Path to AccountContact.Name
- C. Define extraction steps for the Contact and the Account objects, and set the Extract JSON Path to Account.Name
- **D. Define an extraction step for the Contact object and set the Extract JSON Path to Contact Account.Name**

Answer: D

NEW QUESTION # 20

An OmniScript updates data from one Salesforce record, but when it completes, only some of the data is updated in Salesforce. A DataRaptor Load saves the data. What error could cause this behavior?
Choose 2 answers

- A. The fields that are not updated are read only in Salesforce.
- B. In the DataRaptor Load, in the Preview tab, the Record is from the wrong record type.
- **C. The input JSON paths in the DataRaptor Load do not match the JSON from the OmniScript.**
- **D. ContextId is misspelled in the merge code that passes the RecordId to the DataRaptor**

Answer: C,D

Explanation:

The input JSON paths in the DataRaptor Load must match the JSON from the OmniScript, otherwise the data will not be mapped correctly to the Salesforce fields. ContextId must be spelled correctly in the merge code that passes the RecordId to the DataRaptor, otherwise the DataRaptor will not be able to identify which record to update. The fields that are not updated are not necessarily read only in Salesforce, as they could be editable by other means. In the DataRaptor Load, in the Preview tab, the Record is from the wrong record type has no effect on updating data in Salesforce, as it is only used for testing purposes.

NEW QUESTION # 21

A developer builds a new OmniScript. It contains a Set Values element with a ContextId key/value pair that was used during testing. What should the developer do before moving the OmniScript to a production org?

- **A. Add a Show/Hide condition on the Set Values element.**
- B. Update the ContextId value to specify an id from the Production org.
- C. Delete or Deactivate the Set Values element.
- D. Deactivate the contextId key/value pair

Answer: A

NEW QUESTION # 22

A developer needs to transform contact data into a JSON array.

Given the input JSON shown above, what are two ways a developer could configure a DATA Raptor transform to achieve the expected Output JSON? Choose 2 answers

- **A. Use a formula LIST(Contact), and add the output of the formula as the input in the Transform tab.**
- B. Set the Input JSON path as List(Contact) and the Output JSON Path as Contact.
- **C. Set the Input JSON Path as Contact the out JSON Path as Contact and the output Data type as List.**
- D. Set the input JSON Path as Contact and the OutPut JSON Path as List (Contact)

Answer: A,C

Explanation:

A DataRaptor Transform can be used to transform data from one format to another, such as JSON, XML, or CSV. The developer can specify the input and output paths for each field in the Transform tab. The developer can also use formulas to manipulate data in the Formula tab. To transform contact data into a JSON array, the developer can use either of these methods:

- * Use a formula LIST(Contact), and add the output of the formula as the input in the Transform tab. This will create a list of contact objects from the input JSON and output it as a JSON array.
- * Set the Input JSON Path as Contact, the Output JSON Path as Contact, and the Output Data Type as List. This will output each contact object as an element of a JSON array.

NEW QUESTION # 23

Refer to the following row-versioned calculation matrix.

□ The developer needs to delete the row that contains the Code CA-SF.

If the developer deletes that row in Version 3, what is the result?

- A. The row is delete only in Version 3.
- B. The row is deleted In Versions 2 and 3 but will remain in Version 1.
- C. The row is deleted in all versions
- D. The row is deleted in Version 3 and Version 1.

Answer: A

NEW QUESTION # 24

.....

When candidates decide to pass the OmniStudio-Developer exam, the first thing that comes to mind is to look for a study material to prepare for their exam.
