New Copado-Extension-Builder Test Answers | Copado-Extension-Builder Reliable Exam Blueprint

We know that your work is very busy, and there are many trivial things in life. There is not much time you can spend on research. But our Copado-Extension-Builder exam questions can promise to take the exam 20 to 30 hours after you use our products. The idea of Copado-Extension-Builder study materials is to let you learn the most valuable things in the shortest possible time. And it is proved and tested by tens of thousands of our loyal customers. And our Copado-Extension-Builder training engine can help you achieve success with 100% guarantee.

Copado Certified Extension Builder Sample Questions (Q23-Q28):

NEW QUESTION # 23

Copado Extensions Custom Metadata Types can be defined as:

- A. Metadata types that monitor unwanted metadata changes on any pipeline connected org and let you remove them from the deployment.
- B. Metadata types that contain custom-based metadata components other than profile and permission sets.
- C. Metadata types that determine the behavior of your metadata components and help you customize them as per requirement.
- D. Metadata types that let you add metadata records instead of data records and provides you the capability to build apps or solution.

Answer: D

Explanation:

Comprehensive and Detailed 100to 150 words of Explanation From Copado Extension builder topics:

Copado Extensions Custom Metadata Types are used to package configuration-like records as metadata instead of ordinary data records. Option B is correct because Custom Metadata Types allow developers to define records that can be included in packages and deployed across orgs. This is important for Copado Extensions because extension-related configuration must be transportable and installable in another Copado environment. When building an extension, records such as extension configuration details can be represented through custom metadata so they behave like packageable setup data. Option A is too general and does not capture the key distinction between metadata records and data records. Option C describes metadata monitoring, which is unrelated. Option D is also incorrect because Custom Metadata Types are not simply a container for non-profile metadata components.

NEW QUESTION # 24

Which programming languages are supported by Copado Functions?

- A. JavaScript (Node)
- B. Bash
- C. Java
- D. Python

Answer: A,B,D

Explanation:

Comprehensive and Detailed 100to 150 words of Explanation From Copado Extension builder topics:

Copado Functions support Bash, JavaScript using Node, and Python. These languages are commonly used for DevOps automation because they are flexible and suitable for scripting, integrations, validations, and command-line operations. Bash is useful for shell-based automation and running command-line tools.

JavaScript with Node is useful for API integrations, cloud automation, and modern scripting workflows.

Python is widely used for automation, data handling, testing, and integration logic. Java is not listed as a supported Copado Functions language in this question. In Extension Builder, choosing the correct language is important because the function runtime and selected Function Image must support the script. Using an unsupported language would prevent the function from executing properly in Copado-managed infrastructure.

NEW QUESTION # 25

Which two types of records can be generated after installing a Copado Extension?

- A. Functions and Job Templates
- B. Functions and Apex Class
- C. Apex Class and Job Templates
- D. Job Templates and Results

Answer: A

Explanation:

Comprehensive and Detailed 100to 150 words of Explanation From Copado Extension builder topics:

After installing a Copado Extension, the two record types that can be generated are Functions and Job Templates. Option C is correct because these are the supported Copado DevOps records commonly packaged through the Copado Extensions tool. Functions contain script-based automation logic that can run tests, validations, integrations, or deployment-related tasks. Job Templates define reusable automation processes using Job Steps such as Functions, Salesforce Flows, or Manual Tasks. Apex Classes are Salesforce metadata and are not generated as Copado extension data records through this process. Job Results are also not generated as reusable extension records because they represent runtime execution history, not reusable configuration. Therefore, Functions and Job Templates are the correct records created after installing a Copado Extension.

NEW QUESTION # 26

Which of the following Function Image enables you to deploy to Heroku?

- A. Git Utils
- B. Core

- C. DPL
- D. Metadata Image

Answer: C

Explanation:

Comprehensive and Detailed 100to 150 words of Explanation From Copado Extension builder topics:

The DPL Function Image enables deployment to Heroku. In Copado Functions, a Function Image is the containerized runtime environment that contains the tools, libraries, and applications needed to execute a function. Different Function Images support different automation scenarios. DPL is used for deployment tasks, including Heroku deployment, so option A is correct. Core is a general-purpose image, Git Utils is used for Git-related operations, and Metadata Image is used for metadata-related tasks. Since the question specifically asks about deploying to Heroku, DPL is the correct image. This is important in multi-cloud DevOps because Copado Functions allow Salesforce release processes to coordinate automation beyond Salesforce, including platforms such as Heroku and other cloud systems.

NEW QUESTION # 27

Whenever you execute a Job Template, Copado creates a Job Execution record. What is the Job Execution record used for?

- A. From Job Execution records, you can define the types of job templates that should be executed as part of different processes.
- B. Job Execution records help you discover the overall result of the job template execution and the error message if the execution failed.
- C. Job Execution record generates a pre-execution result for users to validate the potential status before they actually execute the Job Template.
- D. Job Execution record enables you to promote job templates to the next environment and build create custom configurations if required.

Answer: B

Explanation:

Comprehensive and Detailed 100to 150 words of Explanation From Copado Extension builder topics:

A Job Execution record is used to review the outcome of a specific Job Template run. Option B is correct because the record helps users discover the overall result of the execution and view error messages if the process failed. This is important for troubleshooting, auditability, and operational visibility. A Job Template stores the reusable process design, while a Job Execution record stores runtime information for one execution of that template. It can include status, logs, results, and failure details. Option A is incorrect because Job Execution records do not promote templates to the next environment. Option C is incorrect because template types are defined in configuration, not from Job Execution records. Option D is incorrect because Job Execution records are created for actual execution tracking, not pre-execution prediction.

NEW QUESTION # 28

.....

With our Copado Copado-Extension-Builder exam questions material, we promise your success in Copado certification. We guarantee that if you study completely from our practice Copado Copado-Extension-Builder exams, you will pass your Copado Copado-Extension-Builder exam with flying colors on the first try. If you are pressed for time when studying for the Copado Certified Extension Builder PDF Questions and working several jobs, PDF format is the ideal option. Because the Itbraindumps follows every bit of the official Copado Certified Extension Builder exam syllabus to compile the most relevant Copado Exam Questions and answers with a 100% chance of appearing in the actual Copado Certified Extension Builder exam. The Copado Copado-Extension-Builder PDF file does not require any installation and is equally suitable for PCs, mobile devices, and tablets. Using a smartphone, you may go through the Copado Copado-Extension-Builder exam questions whenever and wherever you desire. The Copado-Extension-Builder PDF files are also printable for making handy notes.
