

Prep4King Cisco 300-515 exam practice questions and answers

DOWNLOAD the newest Prep4King 300-515 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1B01KokLIHZdtQU-yNhfq-AQau1liHb_

Our professions endeavor to provide you with the newest information with dedication on a daily basis to ensure that you can catch up with the slight changes of the 300-515 test. Therefore, our customers are able to enjoy the high-productive and high-efficient users' experience. In this circumstance, as long as your propose and demand are rational, we have the duty to guarantee that you can enjoy the one-year updating system for free. After purchasing our 300-515 Test Prep, you have the right to enjoy the free updates for one year long after you buy our 300-515 exam questions.

Cisco 300-515 Exam covers a range of topics related to service provider VPN services, including VPN technologies, architectures, and solutions, as well as configuration, troubleshooting, and management of VPN services. Candidates taking the exam should have a good understanding of routing and switching technologies, as well as knowledge of VPN security technologies and protocols.

300-515 training materials: Implementing Cisco Service Provider VPN Services & 300-515 guide torrent & Cisco 300-515 quiz

We really take the requirements of our worthy customers into account. Perhaps you know nothing about our 300-515 study guide. Our free demos of our 300-515 learning questions will help you know our study materials comprehensively. As we have three different kinds of the 300-515 Practice Braindumps, accordingly we have three kinds of the free demos as well. They are a small part of the questions and answers of the 300-515 learning quiz.

Cisco 300-515 exam consists of multiple-choice questions and simulations that test a candidate's knowledge and skills in implementing VPN services. 300-515 exam is 90 minutes long and can be taken in English or Japanese. Candidates need to achieve a minimum score of 750 out of 1000 to pass the exam. 300-515 Exam Fee is \$300, and it can be taken at any Pearson VUE testing center worldwide.

Cisco Implementing Cisco Service Provider VPN Services Sample Questions (Q80-Q85):

NEW QUESTION # 80

Which two statements describe primary differences between MPLS Layer 2 and Layer 3 VPNs? (Choose two.)

- A. Layer 2 VPNs use BGP, but Layer 3 VPNs use VPLS.
- B. Layer 2 VPNs use L2TPv3 tunneling, but Layer 3 VPNs use GRE tunneling.
- C. Layer 2 VPNs use IPsec tunneling, but Layer 3 VPNs use L2TPv3 tunneling.

- D. Layer 2 VPNs use IPsec tunneling, but Layer 3 VPNs use pseudowires to provide tunneling.
- E. Layer 2 VPNs use AToM, but Layer 3 VPNs use MPLS/BGP.

Answer: B,E

NEW QUESTION # 81

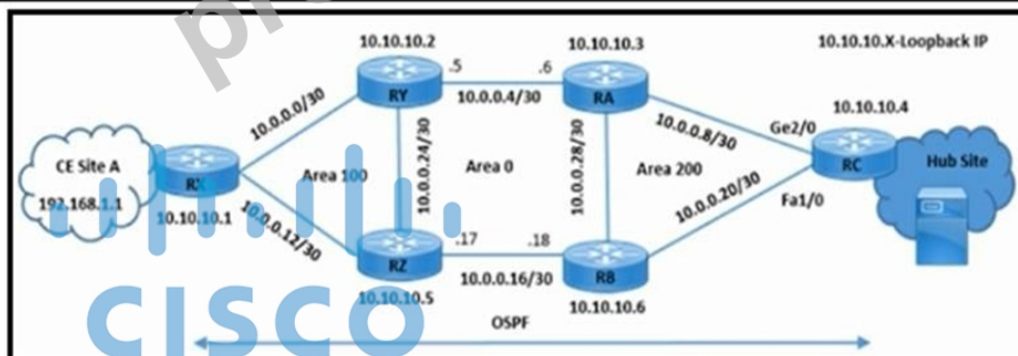

Refer to the exhibit. An enterprise customer reported packet drops to 192.168.1.1 from the hub site. The network operation team found that the link between RC and RA is down in OSPF area 200. Routers RZ, RB, and RC set up OSPF neighborship with all adjacent routers. Which configuration must be applied to router RC to resolve the issue?

```

RC#show ip route 192.168.1.1
Routing entry for 192.168.1.1/32
  Known via "ospf 10", distance 110, metric 6538, type inter area
  Last update from 10.0.0.21 on FastEthernet1/0, 00:00:06 ago
  Routing Descriptor Blocks:
    * 10.0.0.21, from 10.10.10.6, 00:00:06 ago, via FastEthernet1/0
      Route metric is 6538, traffic share count is 1

RC#show running-config interface fa1/0
interface FastEthernet1/0
  ip address 10.0.0.22 255.255.255.252
  ip ospf cost 6535
  ip ospf resync-timeout 6534
  ip ospf priority 200
  duplex half
  mpls label protocol ldp
  mpls ip
end

```

- A. RC(config)#int fastEthernet 1/0
RC(config-if)#no ip ospf cost 6534
- B. RC(config)#int fastEthernet 1/0
RC(config-if)#no ip ospf priority 200
- C. RC(config)#int fastEthernet 1/0
RC(config-if)#no ip ospf resync-timeout 6534
- D. RC(config)#int fastEthernet 1/0
RC(config-if)# ip ospf 10 area 200

Answer: D

Explanation:

The interface toward RA lacked any OSPF area assignment, so RC never formed an adjacency in area 200. Adding the ip ospf 10 area 200 command places the link into the correct OSPF process and area, restoring the neighbor relationship and eliminating the end-to-end packet drops.

NEW QUESTION # 82

How is an IPv6 route learned by other PEs if OSPFv3 is used as the PE-CE routing protocol?

- A. The PE redistributes the OSPFv3 into MP-BGP in the VPNv4 address family.
- B. A 6to4 tunnel is needed to transmit IPv6 traffic between customer sites over an MPLS SP core.
- C. A 6PE tunnel is needed to transmit IPv6 traffic between customer sites over an MPLS SP core.
- D. The PE redistributes the OSPFv3 into MP-BGP in the VPNv6 address family.

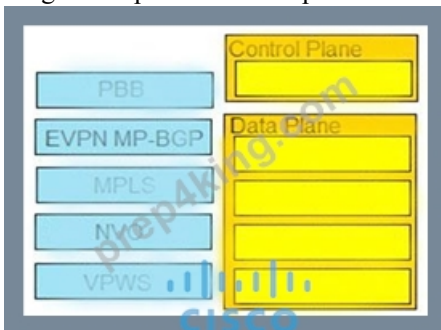

Answer: D

Explanation:

When OSPFv3 runs between CE and PE, the PE learns the customer's IPv6 routes via OSPFv3 and then injects them into MP-BGP under the VPNv6 (ipv6 vpn) address-family. This advertises the IPv6 prefixes (with RDs/RTs) to remote PEs over the MPLS core.

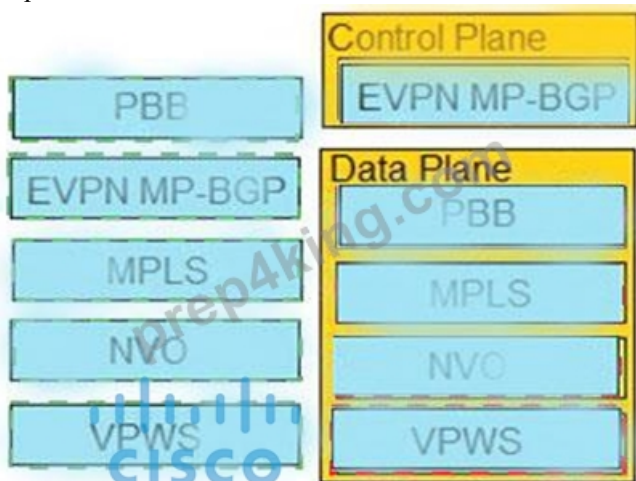

NEW QUESTION # 83

Drag and drop the EVPN components from the left onto the correct planes on the right.

Answer:

Explanation:

NEW QUESTION # 84

Refer to the exhibit. A new remote office requires access to the extranet of the parent organization to use centralized services. Multicast content must be distributed securely across an ISP connection from the parent organization to the remote office. Which action must the team take to implement the required services?

- A. Configure a CSC connection so that the parent organization serves as an ISP sharing services to the remote office.
- B. Configure PIM-SM in the core with the RP configured as a P router and use the allowas-in feature to permit the multicast traffic to pass over the VPN.
- C. Configure the remote office AS number to be the same as the parent organization, and use the AS-Override feature to allow.
- **D. Configure SSM in the core and assign the correct range of SSM IP addresses to the default and data MDT groups.**

Answer: D

Explanation:

To carry multicast traffic securely between customer sites across an ISP MPLS/VPN core, multicast VPN must be implemented. This is done by using Source-Specific Multicast in the provider core and assigning appropriate SSM address ranges to the default MDT and data MDT groups. The MDT tunnels carry multicast customer traffic over the provider network while maintaining VPN separation and security.
