

# 100% Pass Pass-Sure JN0-460 - Certification Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Exam Cost

2026 Latest Dumpexams JN0-460 PDF Dumps and JN0-460 Exam Engine Free Share: [https://drive.google.com/open?id=1U8HPSht7gOVKNYw\\_Mm7J1aX1udFdDIvM](https://drive.google.com/open?id=1U8HPSht7gOVKNYw_Mm7J1aX1udFdDIvM)

The JN0-460 exam question offer a variety of learning modes for users to choose from, which can be used for multiple clients of computers and mobile phones to study online, as well as to print and print data for offline consolidation. For any candidate, choosing the JN0-460 question torrent material is the key to passing the exam. Our study materials can fully meet all your needs: Avoid wasting your time and improve your learning efficiency. Spending little hours per day within one week, you can pass the exam easily. You will don't take any risks and losses if you purchase and learn our JN0-460 Latest Exam Dumps, do you?

## Juniper JN0-460 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Wired Assurance Management or Operations: This section of the exam measures the skills of Network Operations Engineers and focuses on the management and operational aspects of Wired Assurance. It covers switch management, port profiles, and dynamic port configuration to ensure optimal network performance. The section also explores service-level expectations, client insights, and the use of APIs for improved monitoring and automation. Candidates gain an understanding of how MistAI enables proactive management and predictive troubleshooting to maintain service quality.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Wired Assurance Fundamentals: This section of the exam measures the skills of Network Support Engineers and covers the foundational elements of Wired Assurance within the MistAI ecosystem. It introduces candidates to key concepts such as supported devices, solution architecture, and the main features and components that define Wired Assurance functionality. Additionally, it highlights how MistAI accounts, analytics, and subscriptions integrate to deliver intelligent insights for network performance and operations.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Campus Fabric Architecture: This section of the exam measures the skills of Network Design Engineers and focuses on understanding and deploying Campus Fabric Architectures. It introduces essential design concepts such as EVPN multihoming, IP Clos architecture, and micro-segmentation. The section also compares CRB and ERB models, explains scaling requirements, and highlights how the Campus Fabric Core-Distribution design supports high-performance, scalable, and secure enterprise networks.</li> </ul>

Topic 4	<ul style="list-style-type: none"> <li>• <b>Campus EVPN-VXLAN:</b> This section of the exam measures the skills of Data Center Network Engineers and explores the key principles of VXLAN and EVPN technologies. Candidates learn about Layer 2 tunneling, data and control plane operations, and the functions of VTEPs and VXLAN gateways. Additionally, it covers advanced EVPN concepts such as multipath routing, route types, and identifiers. The section concludes with a focus on MAC learning and policy applications to ensure efficient, scalable, and resilient network fabrics.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Wired Assurance Provisioning or Deployment:</b> This section of the exam measures the skills of Network Deployment Specialists and focuses on the provisioning and deployment processes of Wired Assurance. It includes the essential steps and options involved in setting up networks, from configuration templates to deployment methodologies. Candidates learn about provisioning procedures, supported architectures, and the use of site variables to streamline automation and consistency across wired infrastructures.</li> </ul>

## JN0-460 Reliable Test Pdf & JN0-460 Exam Answers

Are you seeking to pass your Mist AI Wired, Specialist (JNCIS-MistAI-Wired)? If so, Dumpexams is the ideal spot to begin. Dumpexams provides comprehensive JN0-460 Exam Questions (Links to an external site.) preparation in two simple formats: a pdf file format and a Juniper JN0-460 online practice test generator. If you fail your Mist AI Wired, Specialist (JNCIS-MistAI-Wired) (JN0-460), you can get a complete refund plus a 20% discount! Read on to find out more about the amazing JN0-460 exam questions.

## Juniper Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Sample Questions (Q75-Q80):

### NEW QUESTION # 75

Which statement is correct about the VXLAN data plane?

- A. The data plane learns the IP addresses of end-user devices.
- B. The data plane advertises the MAC addresses of end-user devices.
- C. The data plane learns the MAC addresses of end-user devices.
- **D. The data plane encapsulates the traffic.**

**Answer: D**

Explanation:

VXLAN (Virtual Extensible LAN) uses an overlay encapsulation method to carry Layer-2 frames over an IP underlay. This functionality is part of the data plane, which is responsible for packet forwarding and encapsulation/decapsulation.

"In an EVPN-VXLAN fabric, the control plane (via BGP EVPN) learns and advertises MAC and IP information, while the data plane encapsulates and forwards traffic using VXLAN tunnels between VTEPs." Option A is incorrect: IP learning happens in the control plane, not the data plane.

Option B is incorrect: MAC advertisement is done in the control plane through EVPN route types.

Option D is incorrect: MAC learning is handled by EVPN control plane, not the VXLAN data plane.

Option C is correct: the VXLAN data plane encapsulates the traffic in UDP tunnels between VTEPs.

### NEW QUESTION # 76

You are asked to identify whether your wired network is experiencing issues with jitter.

Which Juniper MistWired Assurance service-level expectation (SLE)metric provides these details?

- **A. Throughput**
- B. Successful Connect

- C. Capacity
- D. Switch Health

**Answer: A**

Explanation:

In Juniper Mist Wired Assurance, SLEs (Service Level Expectations) measure key performance indicators for wired network quality. Throughput SLE monitors data transfer quality, including latency, jitter, and packet loss, which directly impact real-time applications such as voice or video.

"The Throughput SLE provides visibility into end-to-end network performance by tracking latency, jitter, and packet loss, helping identify congestion or quality issues across wired connections." Option A (Throughput): Correct- this SLE includes jitter measurement.

Option B (Successful Connect): Tracks client connection success rate, not jitter.

Option C (Capacity): Monitors link utilization and load, not jitter.

Option D (Switch Health): Monitors device hardware and software health, not traffic performance.

### NEW QUESTION # 77

Which configuration step is required to create a network in Juniper Mist Wired Assurance?

- A. Enable traffic steering.
- B. Create a unique port profile.
- C. Create a unique access policy.
- **D. Name the VLAN and corresponding VLAN ID.**

**Answer: D**

Explanation:

According to the Juniper Mist Wired Assurance Configuration Guide, the foundational step for implementing Layer 2 segmentation within the Mist UI is the creation of a "Network". In the context of Mist Wired Assurance, a Network is logically synonymous with a Virtual Local Area Network (VLAN). To define a network, a user must navigate to the Networks section-located within an organization-level template, a site-level configuration, or an individual switch configuration-and click to add a new entry.

The two mandatory parameters for this step are naming the VLAN and providing the corresponding VLAN ID. The name serves as a human-readable alias (such as "Corporate\_Data" or "IoT\_Devices") that allows administrators to easily reference the segment across different parts of the configuration without constantly tracking numeric IDs. The VLAN ID is the specific numeric value (ranging from 1 to 4094) that will be used by the switch for 802.1Q tagging on the physical wire.

This step is a prerequisite for more advanced configurations. Once a network is created with its name and ID, it can then be selected within a Port Profile. While creating a port profile (Option C) or an access policy (Option D) are common tasks in the deployment workflow, they are dependent on the prior existence of a defined Network. For instance, a Port Profile defines how a port behaves (e.g., access vs. trunk), but it must point to a specific Network name to know which VLAN to assign to that interface. Similarly, site variables can be used to override these VLAN IDs at specific locations, but the base definition requires the initial pairing of a name and a default ID in the portal.

### NEW QUESTION # 78

You must ensure that routes within a multitenant domain remain unique when advertised in a service provider network. Which EVPN functionality will accomplish this task?

- A. VRF export policy
- **B. route distinguisher**
- C. route targets
- D. Ethernet segment identifier (ESI)

**Answer: B**

Explanation:

According to Juniper documentation, a route distinguisher (RD) is a critical address qualifier used to ensure that network layer

reachability information (NLRI) remains unique within a Multiprotocol BGP (MP-BGP) control plane, especially in multitenant environments. In a service provider network, different tenants may use identical, overlapping private IP address spaces (such as 192.168.1.0/24). If these routes were advertised without a qualifier, BGP—which typically only considers the IP prefix—would treat them as the same route and potentially overwrite one with the other based on standard BGP best-path selection.

The route distinguisher solves this by prepending an 8-byte field to the tenant's IP address, effectively transforming a 32-bit IPv4 prefix into a unique 96-bit VPN-IPv4 address. This 8-byte value is typically configured in formats such as as-number:number or ip-address:number. Because the resulting VPN-IPv4 prefix is unique to that specific routing instance, the service provider's BGP infrastructure can carry and distinguish between overlapping routes from multiple customers simultaneously.

It is important to differentiate the RD from a route target (RT). While the RD's sole purpose is to provide uniqueness so that routes are not discarded or overwritten, the route target is an extended community attribute used to control the import and export of these routes into the correct virtual routing and forwarding (VRF) tables on remote PE routers. In Juniper's Junos OS, each routing instance of type vrf or evpn must have a unique RD associated with it; failing to configure a unique RD or attempting to use the same RD across different instances will result in a configuration commit failure. This fundamental separation of "making routes unique" (RD) and "directing routes to the right place" (RT) allows for the scalable, isolated multitenancy required in modern EVPN-VXLAN campus and data center fabrics.

### NEW QUESTION # 79

Which two statements are correct about adding CLI commands to the "Additional CLI Commands" input box on the switch configuration page? (Choose two.)

- A. The commands are only applied the first time the configuration is saved.
- **B. The commands are applied to the switch every time the configuration is saved.**
- C. To remove the command from the switch, delete the command from the input box.
- **D. To remove the command you must change the actual command from 'set' to 'delete'**

**Answer: B,D**

### NEW QUESTION # 80

.....

If you want to pass an exam just one time, then choose. Our JN0-460 exam dumps will provide you such chance like this. JN0-460 exam braindumps are verified by experienced experts in the field, and they are quite familiar with the questions and answers of the exam center, therefore the quality of the JN0-460 Exam Dumps are guaranteed. Besides we offer free update for 365 days after purchasing.
