Veeam Certified Engineer v12 Sample Questions (Q17-Q22):

NEW QUESTION # 17

Company security policy states that backups must be copied to a remote location within 8 hours.

What step can a backup administrator take to receive an alert automatically if the backup copy job violates the company's policy?

- A. Enable the appropriate RPO monitor
- B. Set a Data Protection alert in Enterprise Manager
- C. Set up post-thaw scripts to send an email
- D. Set a backup copy window alert on the repository

Answer: A

Explanation:

To receive an automatic alert if the backup copy job violates the company's 8-hour policy for copying backups to a remote location, the backup administrator should enable the appropriate Recovery Point Objective (RPO) monitor. This feature tracks the age of the latest backup and alerts when it exceeds the defined RPO.

NEW QUESTION # 18

The administrator of a VMware environment backed up by Veeam Backup & Replication has a critical server that has crashed and will not reboot. They were able to bring it back online quickly using Instant VM Recovery so people could continue to work. What else is required to complete the recovery?

- A. Migrate to production
- B. Commit failover
- C. Merge delta file
- D. Commit tailback

Answer: A

Explanation:

After using Instant VM Recovery to bring a critical crashed server back online quickly, the final step required to complete the recovery process is A: Migrate to production. Instant VM Recovery allows a VM to run directly from the backup file in a temporary location, enabling rapid recovery and minimal downtime. However, because the VM is running in this provisional state, it's essential to migrate it back to the production environment to ensure long-term stability and performance. The "Migrate to production" operation involves moving the running VM from the backup storage to the production storage, typically involving a storage vMotion in VMware environments or a similar process in other hypervisors. This step ensures that the VM is fully restored to its original or a new production environment, solidifying the recovery and allowing the VM to operate as part of the normal infrastructure once again.

NEW QUESTION # 19

A healthcare company is running a critical clinical application on a Red Hat server that must run on bare-metal hardware. The server is backed up with Veeam Agent for Linux. The server has to be recovered completely due to a software error.

Which of the following is the correct recovery method to restore the entire server?

- A. Reinstall Red Hat and restore the volumes from the Linux Agent backups.
- B. **Boot from the Veeam Recovery Media and then restore the whole server.**
- C. Export the backup files as a virtual disk and mount to an existing Linux virtual machine.
- D. Perform a full recovery using the Veeam Backup & Replication interface.

Answer: B

NEW QUESTION # 20

Which of the following is a unique feature that allows Veeam Cloud Service Providers to offer backup and replication services to customers?

- A. Veeam Cloud Scale-out Repository
- B. Veeam Archive Services
- C. **Veeam Cloud Connect**
- D. Veeam Data Vault

Answer: C

NEW QUESTION # 21

A Veeam administrator wants to diagnose known issues in the configuration and performance of backup infrastructure without involving Veeam Technical Support.

What feature of Veeam One should the administrator use?

- A. Best Practices Analyzer
- B. Log Shipping Servers
- C. **Intelligent Diagnostics**
- D. Business View

Answer: C

Explanation:

For diagnosing known issues in the configuration and performance of the backup infrastructure without the direct involvement of Veeam Technical Support, the administrator should utilize A: Intelligent Diagnostics in Veeam One. Intelligent Diagnostics is a feature

designed to proactively detect known issues within the Veeam backup infrastructure by analyzing the system's event logs, performance data, and configurations. It uses predefined patterns and rules derived from common issues identified by Veeam Support to provide early warnings and suggest corrective actions. This self-service approach enables administrators to address potential problems before they impact operations, enhancing the reliability and efficiency of the backup infrastructure.
