CIPS L5M10 시험요강:

주제	소개

주제 1	• Understand Capacity Planning and Control in Logistics Management: This section of the exam measures the skills of Operations Planners and focuses on the techniques and systems used to manage capacity, demand, and resource planning across logistics activities. It explains how organizations balance planning with real-time control, adjust to fluctuating demand, and schedule workloads effectively. Candidates are expected to understand capacity concepts, constraints, demand forecasting, capacity measurement, and different planning approaches such as level planning, chase demand strategies, and demand management methods. The section also examines the use of technology in capacity planning, particularly Materials Requirements Planning (MRP), MRP II, ERP systems, master production scheduling, inventory data, and bills of materials, while recognizing the limitations of these tools. Finally, it covers the role of reverse logistics, emphasizing the handling of customer returns, the development of return policies, and how returned items are reintegrated into the supply chain.
주제 2	• Analyse the Role and Activities of Logistics Management: This section of the exam measures the skills of Logistics Managers and covers the essential concepts, functions, and strategic importance of logistics within modern supply chains. It explains what logistics is, how its key elements work together—such as transportation, warehousing, inventory, packaging, information flow, and security—and how these components support procurement, production, distribution, after-sales processes, and product disposal. The section explores how logistics integrates with broader supply chain management and introduces the idea of total logistics and total cost thinking, showing how multimodal transport and pipeline inventory contribute to efficiency. Candidates must understand how logistics creates competitive advantage by aligning operations with business strategy, managing customer service levels, measuring service quality, and recognizing its financial impact. This heading also evaluates the increasing role of technology in logistics, including barcoding, RFID, e-fulfilment systems, warehouse management systems, automated data capture, and the integration of digital tools across the logistics network.

질문 # 84

Whether a company should implement a Lean or Agile supply chain should be considered as part of which organisational document?

- A. Tactical plan
- B. Logistic plan
- C. Operational plan
- **D. Strategic plan**

Tactical and operational plans translate strategy into mid- and short-term actions. (CIPS L5M10 Study Guide, p. 100)

질문 # 85

Which of the following are advantages of introducing a Materials Requirements Planning (MRP) system to a business? Select TWO.

- **A. Better customer service**
- B. More agile supply chain
- **C. Reduced inventory costs**
- D. Less time spent repairing machines

질문 # 86

Green Frog Ltd is a consultancy with ~50 customers. The CEO plans to use a Cost-to-Serve (CTS) tool to understand customer profitability. Is this the right approach?

- A. Yes - it is expensive but provides high visibility
- **B. Yes - Cost to Serve will allow identification of unprofitable customers**
- C. No - all customers are equally profitable if they pay the same rates
- D. No - use Total Cost of Ownership (TCO) instead

정답: B

설명:

Comprehensive and Detailed Explanation From Exact Extract:

Cost-to-Serve analyses end-to-end activities and resources consumed to serve specific customers or segments, exposing variation in profitability (e.g., delivery distance, visit frequency, handling complexity). It is appropriate for finding unprofitable customers. CTS is not inherently "expensive," and TCO focuses on lifecycle cost of acquiring/owning goods-not customer profitability. (Reference: CIPS L5M10 Study Guide, Cost-to-Serve concept and uses, p. 61)

Comprehensive and Detailed Explanation From Exact Extract:

The Theory of Constraint (TOC) is built on the ideas that every process has a bottleneck and that improving throughput requires exploiting/elevating that constraint (while subordinating other steps). (CIPS L5M10 Study Guide, p. 138)
