## Latest CCRN-Pediatric Test Sample - Exam CCRN-Pediatric Torrent

We strongly recommend using our CCRN-Pediatric exam dumps to prepare for the Critical Care Nursing Exam. It is the best way to ensure success. With our CCRN-Pediatric practice questions, you can get the most out of your studying and maximize your

chances of passing your CCRN-Pediatric Exam. ExamBoosts Critical Care Nursing Exam is the answer if you want to score higher in the CCRN-Pediatric exam and achieve your academic goals.

Achieving certification through the CCRN-Pediatric Certification Exam demonstrates a nurse's commitment to providing high-quality care to critically ill pediatric patients. It also provides a level of recognition and validation of a nurse's expertise in critical care nursing. Additionally, certification can lead to career advancement opportunities and may increase a nurse's earning potential.

AACN CCRN-Pediatric Exam is a challenging and important certification exam for nurses who work in pediatric critical care. By earning this credential, nurses can demonstrate their advanced knowledge and skills in this specialized area of nursing, and position themselves for career advancement opportunities in pediatric critical care.

## AACN Critical Care Nursing Exam Sample Questions (Q112-Q117):

### NEW QUESTION # 112

The primary function of an institutional ethics committee in the critical care area is to:

- A. Advise patients, families, physicians, and staff when ethical situations arise
- B. Establish community partnerships to reduce potential institutional liability
- C. Provide direction to the administrative team for institutional decision-making
- D. Monitor questionable physician or staff actions or practices

**Answer: A**

Explanation:

Ethics committees are convened to help resolve complex, value-laden clinical issues by offering guidance to care teams and families. These committees are composed of interdisciplinary professionals and focus on supporting ethical decision-making in patient care. "Ethics committees assist healthcare professionals, patients, and families in addressing ethical dilemmas, including end-of-life decisions, treatment refusal, and moral distress." (Referenced from CCRN Pediatric - Professional Caring and Ethical Practice: Ethical Decision-Making Support Structures)

### NEW QUESTION # 113

Early management of a child in septic shock includes:

- A. Fluid resuscitation, antibiotic administration, and inotropic support
- B. O<sub>2</sub> supplementation, steroid administration, and antibiotic administration
- C. Fluid resuscitation, analgesic administration, and O<sub>2</sub> supplementation
- D. Bronchodilator administration, diuretic administration, and inotropic support

**Answer: A**

Explanation:

Septic shock in pediatric patients requires early goal-directed therapy, including:

- \* Fluid resuscitation to restore perfusion,
- \* Antibiotics within the first hour to treat the underlying infection, and
- \* Inotropes if shock persists after fluids.

"Early interventions for pediatric septic shock include aggressive fluid resuscitation, timely administration of broad-spectrum antibiotics, and initiation of vasopressors or inotropes if hypotension remains." (Referenced from CCRN Pediatric - Direct Care: Multisystem, Sepsis Management)

### NEW QUESTION # 114

A pediatric patient with a complex, chronic condition has a multidisciplinary care team. The patient's family expresses frustration with receiving conflicting information from different team members.

Which of the following is the most appropriate action for a nurse to take?

- A. Recommend the family direct all of their questions to the attending physician to minimize confusion
- B. Arrange a team meeting to clarify the treatment plan prior to meeting with the family
- C. Reassure the family this is common with complex cases and encourage them to focus on the goal
- D. Provide the family with written information summarizing the key points from each specialist

**Answer: B**

Explanation:

Effective communication is a pillar of ethical and professional nursing practice. In complex care situations, coordination and unified messaging are vital to support family understanding and reduce distress.

"When families express confusion or frustration due to inconsistent communication, it is the nurse's responsibility to advocate for a coordinated approach by facilitating interdisciplinary collaboration and clarity of plan." (Referenced from CCRN Pediatric - Professional Caring and Ethical Practice: Communication and Advocacy) Arranging a team meeting promotes collaboration, consistency, and ensures that the family receives accurate, unified information.

#### NEW QUESTION # 115

When developing a plan of care that includes interventions aimed at preventing complications of a low platelet count in a child with leukemia, which of the following is most appropriate:

- A. consulting doctor about the use of a stool softener
- B. using heparin instead of saline to flush an intermittent IV access device
- C. eliminating raw vegetables and fruits from the child's diet
- D. placing the child in protective isolation

**Answer: A**

Explanation:

Explanation: The use of a stool softener would assist in preventing damage to the rectal mucosa due to hard stool, thereby decreasing the chances of rectal bleeding. Placing the child in protective isolation would be appropriate for the child if the neutrophil count was low. The use of heparin is contraindicated in situations in which there is a possibility of increased bleeding due to low platelets. Avoiding raw vegetables or fruits would be indicated if the child's neutrophil count were low.

#### NEW QUESTION # 116

A nurse is aware that the concept that a developmentally disabled pediatric client could probably learn first is:

- A. life vs. death
- B. love vs. hate
- C. small vs. large
- D. right vs. wrong

**Answer: C**

Explanation:

Explanation: Small vs large is the concept that a developmentally disabled pediatric client could probably learn first. A child who is mentally disabled can learn concrete concepts faster compared to those which re-abstract in nature. Other options are abstract that could be learned at about 7-11 years of life

#### NEW QUESTION # 117
