Test 156-315.81 Collection Pdf, Valid Dumps 156-315.81 Sheet

It is our responsibility to relieve your pressure from preparation of 156-315.81 exam. To help you pass the 156-315.81 exam is our goal. The close to 100% passing rate of our dumps allow you to be rest assured in our products. Not all vendors dare to promise that if you fail the exam, we will give you a full refund. But our IT elite of PremiumVCEDump and our customers who are satisfied with our 156-315.81 Exam software give us the confidence to make such promise.

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q200-Q205):

NEW QUESTION # 200

The Check Point history feature in R81 provides the following:

- A. Policy Installation Date, view install changes and install specific version
- B. View install changes
- C. Policy Installation Date only
- D. View install changes and install specific version

Answer: C

NEW QUESTION # 201

Which one is not a valid upgrade method to R81.10?

- A. Advanced Upgrade
- B. Upgrade with Migration
- C. RPM Upgrade
- D. CPUSE Upgrade

Answer: C

NEW QUESTION # 202

After having saved the Clish Configuration with the "save configuration config.txt" command, where can you find the config.txt file?

- A. You have to launch the WebUI and go to "Config" -> "Export Config File" and specify the destination directory of your local file system.
- B. You will find it in the home directory of your user account (e.g. /home/admin/)
- C. You cannot locate the file in the file system since Clish does not have any access to the bash file system
- D. You can locate the file via SmartConsole > Command Line.

Answer: B

Explanation:

You will find the config.txt file in the home directory of your user account (e.g. /home/admin/)¹. The save configuration config.txt command is a Clish command that saves the current Gaia configuration to a text file². The file is stored in the home directory of the user who executed the command, and it can be accessed by using the cat or less commands in expert mode¹. The file can also be transferred to another machine by using the scp or sftp commands¹. The config.txt file contains the Clish commands that are needed to restore the Gaia configuration to the same state as when the file was saved². The file can be used for backup, migration, or troubleshooting purposes².

NEW QUESTION # 203

Gaia has two default user accounts that cannot be deleted. What are those user accounts?

- A. Expert and Clish
- B. Control and Monitor
- C. Admin and Default
- D. Admin and Monitor

Answer: D

Explanation:

Explanation

Gaia has two default user accounts that cannot be deleted: Admin and Monitor. Admin is a superuser account that has full access to all Gaia features and commands. Monitor is a read-only account that can view Gaia configuration and status but cannot make any changes. Both accounts have predefined passwords that can be changed by the Admin user. References: [Check Point R81 Gaia Administration Guide], page 29 SRC: GAIA R81.20 Administration Guide User Management -> Users These users are created by default and cannot be deleted: admin and monitor

NEW QUESTION # 204

Which of the following is true regarding the Proxy ARP feature for Manual NAT?

- A. fw ctl proxy should be configured
- B. Translate Destination on Client Side should be configured
- C. The local.arp file must always be configured
- D. Automatic proxy ARP configuration can be enabled

Answer: D

Explanation:

The verified answer is B) Automatic proxy ARP configuration can be enabled.

Proxy ARP is a feature that allows a gateway to respond to ARP requests on behalf of another IP address that is not on the same network segment. Proxy ARP is required for manual NAT rules when the NATed IP addresses are not routed to the gateway¹.

By default, proxy ARP for manual NAT rules has to be configured manually by editing the local.arp file or using the CLISH commands on the gateway². However, since R80.10, there is an option to enable automatic proxy ARP configuration for manual NAT rules by modifying the files \$PCPDIR/tmp/.CPprofile.sh and \$PCPDIR/tmp/.CPprofile.csh on the gateway³.

fw ctl proxy is a command that displays the proxy ARP table on the gateway, but it does not configure proxy ARP⁴.

Translate Destination on Client Side is a NAT option that determines whether the destination IP address is translated before or after the routing decision. It does not affect proxy ARP.
