Slack-Dev-201 Reliable Mock Test, Slack-Dev-201 Reliable Source

The authoritative, efficient, and thoughtful service of Slack-Dev-201 practice paper will give you the best user experience, and you can also get what you want with our Slack-Dev-201 study materials. I hope our Slack-Dev-201 study materials can accompany you to pursue your dreams. If you can choose Slack-Dev-201 free training materials, we will be very happy. We look forward to meeting you. With the help of our Slack-Dev-201 learning guide, you will get more opportunities than others, and your dreams may really come true in the near future.

Salesforce Certified Slack Developer Sample Questions (Q104-Q109):

NEW QUESTION # 104

Your company's Slack app is designed to streamline project management.

What design decision best aligns with Slack's commitment to a simplified, efficient work life?

- A. A bot that sends direct messages to project members every time there is a task update

- B. Integration of a dashboard within Slack that provides an overview of project status and key metrics
- C. The app posts real-time updates in the general channel about every minor change in project status
- D. Requiring users to fill out a detailed form in Slack for every task they complete

Answer: B

Explanation:

Integration of a dashboard within Slack that provides an overview of project status and key metrics Integrating a dashboard within Slack to provide a consolidated view of project status and key metrics aligns with Slack's ethos of simplifying work life. It allows users to quickly access vital information in one place, enhancing efficiency and user experience.

Why not the other options:

*Continuous real-time updates for every minor change can overwhelm users and clutter the general channel.

*Frequent direct messages for each task update can become disruptive and may lead to notification fatigue..

*Requiring detailed forms for task completion can be tedious and counterproductive, complicating rather than simplifying the process.

NEW QUESTION # 105

When integrating third-party services into your Slack app, what security aspect is crucial to safeguard user data?

- A. Use only well-known third-party services, regardless of their security practices
- B. Assume all third-party services are secure and require no additional verification
- C. Implement less stringent data validation for trusted third-party services
- D. Rigorously vet and verify the security standards of the third-party services

Answer: D

Explanation:

Rigorously vet and verify the security standards of the third-party services Rigorously vetting and verifying the security standards of any third-party services integrated into your app is crucial. This ensures that these services adhere to high-security standards and do not compromise user data security.

Why not the other options:

*Assuming all third-party services are secure without verification can lead to potential security vulnerabilities.

*Using well-known third-party services does not guarantee they follow adequate security practices.

*Implementing less stringent data validation, even for trusted services, can create security loopholes.

NEW QUESTION # 106

Your team is designing a Slack app for company-wide announcements that need to reach all employees efficiently while minimizing disruption.

What design would be most effective for this purpose?

- A. Use an external email service to send announcements, with summaries posted in Slack
- B. Post announcements in a general company-wide channel where all employees are members
- C. Create a modal that pops up for every user when there is a new announcement
- D. Develop a bot to send individual direct messages to each employee for every announcement

Answer: B

Explanation:

Post announcements in a general company-wide channel where all employees are members Using a general company-wide channel for announcements leverages Slack's architecture effectively by providing a centralized place for communication that is easily accessible to all employees without being overly disruptive.

Why not the other options:

*Sending individual direct messages can be intrusive and is not an efficient use of Slack's messaging capabilities.

*Modals are intended for focused interactions and are not suitable for passive content like announcements.

*It relies on an external tool and does not fully utilize Slack's internal communication strengths.

NEW QUESTION # 107

When retrieving sensitive user data from a database for use in your Slack app, what security measure should be implemented?

- A. Transmit and store the data without encryption for improved performance
- B. Use a common password across the team to access the encrypted data
- C. Store the data in a shared network drive accessible to all team members for convenience
- **D. Encrypt the data during transmission and store it in a secure, encrypted format**

Answer: D

Explanation:

Encrypt the data during transmission and store it in a secure, encrypted format Encrypting sensitive user data during transmission and storing it in a secure, encrypted format is essential for maintaining its confidentiality and integrity. This practice ensures that the data remains protected both in transit and at rest.

Why not the other options:

*Transmitting and storing data without encryption exposes it to potential breaches and unauthorized access.

*Storing sensitive data on a shared network drive accessible to all team members can lead to unauthorized access and potential data leaks.

*Using a common password across the team can lead to security risks if the password is mishandled or leaked.

NEW QUESTION # 108

Your Slack app needs to verify the identity of incoming webhook requests.

What is the most secure method to implement this verification?

- **A. Validate each request using Slack's signing secrets to verify its authenticity**
- B. Use a simple shared secret for all webhook requests
- C. Only accept requests that come from specific, pre-defined IP addresses
- D. Assume all requests coming to the webhook URL are legitimate

Answer: A

Explanation:

Validate each request using Slack's signing secrets to verify its authenticity Validating each incoming webhook request using Slack's signing secrets is the most secure method to verify the authenticity of the request. This ensures that the request is indeed from Slack and not an impersonator.

Why not the other options:

*Assuming all incoming requests are legitimate exposes the app to potential malicious attacks.

*Using a simple shared secret may not provide sufficient security and can be easily compromised..

*Relying solely on pre-defined IP addresses does not guarantee the request's authenticity and can be bypassed by sophisticated attackers.

NEW QUESTION # 109

.....

RealExamFree has focus on offering the accurate and professional exam dumps for Salesforce certification test. All questions and answers of Slack-Dev-201 are written by our IT experts who has more than 10 years' experience in IT filed. With the help of our Slack-Dev-201 Dumps Torrent, you will get high passing score in the test with less time and money.
