問題 #147

Which of the following is most likely to be considered a "material" piece of information regarding a company?

- A. A former board member predicting a long-term decline in the company's stock
- B. A competitor CEO's speculation of a pending management change at the company
- C. The loss of a customer representing a negligible portion of a company's gross sales
- **D. The loss of a customer representing a significant portion of a company's gross sales**

答案: D

解題說明:

Detailed Explanation:

Information is material if its disclosure would likely affect the price of the security or if a reasonable investor would want to know it before making an investment decision. The loss of a customer representing a significant portion of sales would clearly impact earnings and the stock price.

問題 #148

The proper use of long-term charts versus short-term price charts is that:

- A. Daily price charts allow for a better assessment of the price trend

- B. Daily price charts allow for a thorough trend analysis
- **C. Long-term charts allow for a better assessment of the price trend**
- D. Short-term charts identify the primary trend

答案： C

解題說明：

Detailed Explanation:

Long-term charts (Weekly/Monthly) filter out daily noise and volatility, providing a clearer perspective on the major trend and significant support/resistance levels. Thus, long-term charts allow for a better assessment of the price trend²⁵.

問題 #149

Technical analysts generally believe:

- A. Trendlines are useful for validation of price gaps
- B. That trendline analysis cannot be applied to point and figure charts
- **C. A price close beyond the trendline is more significant than an intra-day penetration**
- D. Price whipsaws can be avoided using trendlines

答案： C

解題說明：

Detailed Explanation:

Intraday penetrations of a trendline are often noise or "whipsaws." Technicians place far greater weight on the closing price. A close beyond the trendline confirms that market sentiment has shifted and sustained that shift through the end of the session.

問題 #150

According to the work of Charles Dow and his successors, now referred to as Dow Theory, which of the following is not a hypothesis for the nature of markets and technical analysis?

- A. The primary trend is inviolate
- B. The averages discount everything
- C. Dow Theory is not infallible
- **D. Prices move at random**

答案： D

解題說明：

Detailed Explanation:

Technical Analysis and Dow Theory are built on the premise that prices follow trends and are determined by human psychology (supply/demand), which is non-random. The Efficient Market Hypothesis suggests prices are random (Random Walk), which contradicts the core tenet of Technical Analysis. Therefore, "Prices move at random" is NOT a Dow Theory hypothesis.

問題 #151

As per the theory of contrary opinion, a high degree of consensus normally precedes a:

- A. Pause within an existing trend
- B. Short-term consolidation
- C. Trend continuation
- **D. Trend reversal**

答案： D

解題說明：

Detailed Explanation:

When consensus is high (e.g., 90% bullish), the market is saturated. The trend cannot continue because there are no new buyers. This extreme sentiment typically marks a market top (or bottom), preceding a major trend reversal.
