Test UiPath-ADAv1 Engine Version, UiPath-ADAv1 Test Fee

We can ensure you a pass rate as high as 99% of our UiPath-ADAv1 exam questions. So with our UiPath-ADAv1 study guide, you will pass the UiPath-ADAv1 exam. And this is the right thing you can imagine. You surely desire the UiPath-ADAv1 certification. So with a tool as good as our UiPath-ADAv1 Exam Material, why not study and practice for just 20 to 30 hours and then pass the examination? It is more convenient for you to study and practice anytime, anywhere with our varied versions of UiPath-ADAv1 exam braindumps.

UiPath UiPath-ADAv1 Exam Syllabus Topics:

| Topic | Details |
|---------|---|
| Topic 1 | <ul style="list-style-type: none">Workflow Analyzer: Here, the topic introduces the Workflow Analyzer tool, explaining its use for project analysis and validation, and providing guidance on configuring its settings. |
| Topic 2 | <ul style="list-style-type: none">Excel Automation: The section delves into Excel Automation, showcasing the use of modern Excel activities and workbook-level operations. |
| Topic 3 | <ul style="list-style-type: none">UI Automation: Here, the topic explains how UI Automation works and offer guidance on using the Modern Recorder and associated activities. It also covers UI synchronization and the configuration of static and dynamic descriptors. |

| | |
|----------|---|
| Topic 4 | <ul style="list-style-type: none"> • Data Manipulation: This topic covers a range of data manipulation techniques, including string manipulation using VB.Net methods and the RegEx Builder. It also guides users through working with arrays, lists, and dictionaries, as well as building and iterating through Data Tables. |
| Topic 5 | <ul style="list-style-type: none"> • Implementation Methodology: The section offers an overview of project implementation stages, interpretation of PDDs and SDDs, and the conduct of automation project peer reviews, ensuring a structured approach to development. |
| Topic 6 | <ul style="list-style-type: none"> • Integration Service: The section introduces Integration Service, explaining its purpose and demonstrating the use of connectors and triggers in automation projects to interact with external systems. |
| Topic 7 | <ul style="list-style-type: none"> • Orchestrator: This topic covers the definition of Orchestrator entities, tenant entities, and folder entities, along with their respective functionalities. It also provides practical guidance on robot provisioning, workspace management, role assignments, and logging features. |
| Topic 8 | <ul style="list-style-type: none"> • Email Automation: This topic covers retrieving emails via IMAP • POP3, sending SMTP messages, and managing integrations with Microsoft and Gmail accounts, utilizing their respective packages. |
| Topic 9 | <ul style="list-style-type: none"> • Business Knowledge: This topic covers the fundamental concepts of business process automation, highlighting its value proposition. It also explores key ideas related to business processes, offering a comprehensive understanding of this domain. |
| Topic 10 | <ul style="list-style-type: none"> • Working with Files and Folders: Here, you explore creating, managing, and navigating local files and folders, providing a foundation for file system automation. |
| Topic 11 | <ul style="list-style-type: none"> • Studio Interface: Here, the topic guides users through installing Studio Community Edition and connecting to Orchestrator. It covers profile differences, backstage view options, compatibility modes, and package management. Additionally, it offers an in-depth exploration of the Studio interface and its various elements. |
| Topic 12 | <ul style="list-style-type: none"> • Control Flow: The section explains the functionality of control flow activities and their impact on workflow types. It covers the use of sequence and flowchart layouts. Lastly, it focuses on implementing IF, For Each, and While activities, among others. |

UiPath Automation Developer Associate v1 Exam Sample Questions (Q299-Q304):

NEW QUESTION # 299

Which of the following statements is true about Global Variables?

- A. Global Variables can be created from the Data Manager panel and from the Variables panel.
- B. Global Variables have a Direction property (In/Out).
- **C. Global Variables values can be modified during the automation execution.**
- D. Global Variables can be accessed only from the Main workflow.

Answer: C

Explanation:

Option A is correct:

* Global Variables in UiPath are designed to store values that can be accessed and modified across the entire project during automation execution. Their values are mutable unless explicitly restricted (e.g., via constants). This aligns with UiPath's variable behavior, where variables are editable by default unless marked as constants.

Option B is incorrect:

* Global Variables are created exclusively in the Variables panel by setting their scope to "Global." The Data Manager panel is used for managing data sources (e.g., Excel files, databases) and does not support variable creation.

Option C is incorrect:

* Global Variables are accessible across all workflows, sequences, or activities within the project, not just the Main workflow. Their scope spans the entire project.

Option D is incorrect:

* The Direction property (In/Out/InOut) applies only to Arguments, which are used to pass data between workflows or processes. Variables, including Global Variables, do not have a Direction property.

NEW QUESTION # 300

When should the Show Elements button be used in the Computer Vision wizard?

- **A. Highlighting all UI elements that have been identified by the Computer Vision analysis.**
- B. Activating a real-time view of the target app's UI during automation.
- C. Displaying a list of all available UI elements and their properties.
- D. Filtering out specific UI elements from being processed by the Computer Vision engine.

Answer: A

Explanation:

The Show Elements button in the Computer Vision wizard is used to toggle the highlighting of all UI elements that have been detected by the Computer Vision engine on the target application. This helps to visualize the accuracy and scope of the UI element recognition and to select the desired UI element for automation. (UiPath Automation Developer study guide)

NEW QUESTION # 301

What variable type should the developer use to store the monetary amount read from a single cell in an Excel file, before inputting it into a field in a web application for the automation process?

- **A. Double**
- B. DataRow
- C. Object
- D. List

Answer: A

Explanation:

The correct variable type to store a monetary amount is Double because:

- * Monetary values often contain decimal places (e.g., 1234.56).
- * Double provides accurate calculations for financial transactions.
- * UiPath Excel activities return numbers as Double when reading numeric values from cells.

Why is B Correct?

Double is ideal for:

- * Storing decimal values (currency, calculations, etc.).
- * Ensuring precision when processing monetary data.
- * Avoiding unnecessary conversions when passing data to web applications.

NEW QUESTION # 302

What is the difference between the UiPath Studio and UiPath StudioX development profiles?

- A. UiPath Studio can save values into variables for later use, while StudioX doesn't offer this functionality.
- B. UiPath Studio is meant for business users looking to automate tasks for themselves and their immediate teams, while StudioX is meant for Automation developers.
- C. UiPath Studio can only build unattended automations, while StudioX can only build attended automations.
- **D. UiPath Studio allows the user to split the automation into smaller workflows that can be invoked, while StudioX doesn't offer this functionality.**

Answer: D

Explanation:

The main difference between UiPath Studio and UiPath StudioX is their target audience and functionality.

UiPath Studio is aimed at technical users and allows for complex automation development, including the ability to split automations

into smaller workflows that can be invoked from within other workflows. On the other hand, StudioX is designed for non-technical business users to automate tasks without writing code, and while it does allow for simpler workflows, it does not have the same depth of functionality as Studio for modularizing workflows.

NEW QUESTION # 303

In a UiPath REFramework project, what is the primary purpose of using Custom Log Fields?

- A. To modify the representation of logged contextual data as it is displayed in the Orchestrator.
- **B. To add specific contextual information to log messages that are relevant to the automation process.**
- C. To generate extra variables alongside log messages, enhancing workflow understanding.
- D. To maintain contextual insights within log messages, including secure details like credentials.

Answer: B

Explanation:

The Add Log Fields activity allows developers to create custom log fields that are added to the Robot Execution Logs. These custom log fields can be used to store and display additional information that is relevant to the automation process, such as transaction ID, invoice number, customer name, etc. The custom log fields can help to improve the traceability and analysis of the automation process, as well as to filter and group the logs based on specific criteria. (UiPath Automation Developer study guide)
