

# Latest NCP-US-6.5 Learning Material | Valid NCP-US-6.5 Exam Duration

BTW, DOWNLOAD part of Prep4pass NCP-US-6.5 dumps from Cloud Storage: <https://drive.google.com/open?id=1LpqzfxepM4JNSDvukGSrCky2EUf8EjJ>

We have three different versions of our NCP-US-6.5 exam questions which can cater to different needs of our customers. They are the versions: PDF, Software and APP online. The PDF version of our NCP-US-6.5 exam simulation can be printed out, suitable for you who like to take notes, your unique notes may make you more profound. The Software version of our NCP-US-6.5 Study Materials can simulate the real exam. Adn the APP online version can be applied to all electronic devices.

## Nutanix NCP-US-6.5 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• Troubleshoot issues related to Nutanix Objects</li> <li>• Troubleshoot issues related to Nutanix Volumes</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• Utilize File Analytics for data security</li> <li>• Troubleshoot Nutanix Unified Storage</li> <li>• Configure Nutanix Volumes</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• Given a scenario, configure shares, buckets, and or Volume Groups</li> <li>• Troubleshoot a failed upgrade for Files</li> <li>• Objects</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• Configure Nutanix Files with advanced features</li> <li>• Determine the appropriate method to ensure data availability</li> <li>• recoverability</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• Configure Nutanix Objects</li> <li>• Describe how to monitor performance and usage</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>• Configure and Utilize Nutanix Unified Storage</li> <li>• Identify the steps to deploy Nutanix Objects</li> </ul>
Topic 7	<ul style="list-style-type: none"> <li>• Deploy and Upgrade Nutanix Unified Storage</li> <li>• Perform upgrades</li> <li>• maintenance for Files</li> <li>• Objects implementations</li> </ul>

## Valid NCP-US-6.5 Exam Duration & NCP-US-6.5 Passleader Review

This society is ever – changing and the test content will change with the change of society. You don't have to worry that our NCP-US-6.5 training materials will be out of date. In order to keep up with the change direction of the NCP-US-6.5 Exam, our question bank has been constantly updated. We have dedicated IT staff that checks for updates of our NCP-US-6.5 study questions every day and sends them to you automatically once they occur.

### Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q95-Q100):

#### NEW QUESTION # 95

An administrator has been tasked with creating a distributed share on a single-node cluster, but has been unable to successfully complete the task.

Why is this task failing?

- A. AOS version should be greater than 6.0.
- **B. Distributed shares require multiple nodes.**
- C. File server version should be greater than 3.8.0
- D. Number of distributed shares limit reached.

**Answer: B**

Explanation:

A distributed share is a type of SMB share or NFS export that distributes the hosting of top-level directories across multiple FSVMs, which improves load balancing and performance. A distributed share cannot be created on a single-node cluster, because there is only one FSVM available. A distributed share requires at least two nodes in the cluster to distribute the directories. Therefore, the task of creating a distributed share on a single-node cluster will fail. Reference: Nutanix Files Administration Guide, page 33; Nutanix Files Solution Guide, page 8

#### NEW QUESTION # 96

An administrator has created a volume and needs to attach it to a windows host via iSCSI. The data Services IP has been configured in the MS iSCSI Initiator, but no target are visible.

What is most likely the cause this issue?

- **A. The host's IQN is not authorized to access to the volume.**
- B. The CHAP Authentication has not been configured on the client.
- C. The CHAP password configured on the client is incorrect.
- D. The host' s IP address is not authorized to access the volume.

**Answer: A**

Explanation:

Nutanix Volumes uses IQN-based authorization to control access to volumes. The administrator must specify the IQN of the host that needs to access the volume when creating or editing the volume. If the host's IQN is not authorized, it will not be able to see the target in the MS iSCSI Initiator. References: Nutanix Volumes Administration Guide

#### NEW QUESTION # 97

An administrator needs to ensure maximum performance, throughput, and redundancy for the company's Oracle RAC on Linux implementation, while using the native method for securing workloads.

Which configuration meets these requirements?

- A. Files with a general purpose share and File Blocking
- B. Volumes with CHAP and multiple vDisks
- **C. Volumes with MPIIO and a single vDisk**
- D. Files with a distributed share and ABE

**Answer: C**

Explanation:

Volumes is a feature that allows users to create and manage block storage devices (volume groups) on a Nutanix cluster. Volume groups can be accessed by external hosts using the iSCSI protocol. To ensure maximum performance, throughput, and redundancy for Oracle RAC on Linux implementation, while using the native method for securing workloads, the recommended configuration is to use Volumes with MPIO (Multipath I/O) and a single vDisk (virtual disk). MPIO is a technique that allows multiple paths between an iSCSI initiator and an iSCSI target, which improves performance and availability. A single vDisk is a logical unit number (LUN) that can be assigned to multiple hosts in a volume group, which simplifies management and reduces overhead. #### **NEW QUESTION # 98**

An administrator has been tasked with updating the cool-off interval of an existing WORM share from the default value to five minutes. How should the administrator complete this task?

- A. Use FSM to update the `worm_cooloff_interval` parameter.
- B. Delete and re-create the WORM share.
- **C. Update the `worm_cooloff_interval` parameter using CLI.**
- D. Contact support to update the WORM share.

**Answer: C**

Explanation:

Nutanix Files, part of Nutanix Unified Storage (NUS), supports WORM (Write Once, Read Many) shares to enforce immutability for compliance and data retention. A WORM share prevents files from being modified or deleted for a specified retention period. The "cool-off interval" (or cool-off period) is the time after a file is written to a WORM share during which it can still be modified or deleted before becoming immutable. The default cool-off interval is typically 1 minute, and the administrator wants to update it to 5 minutes.

Analysis of Options:

\* Option A (Delete and re-create the WORM share): Incorrect. Deleting and re-creating the WORM share would remove the existing share and its data, which is disruptive and unnecessary. The cool-off interval can be updated without deleting the share, making this an inefficient and incorrect approach.

\* Option B (Update the `worm_cooloff_interval` parameter using CLI): Correct. The `worm_cooloff_interval` parameter controls the cool-off period for WORM shares in Nutanix Files. This parameter can be updated using the Nutanix CLI (e.g., `ncli` or `afs` commands) on the file server. The administrator can log into an FSVM, use the CLI to set the `worm_cooloff_interval` to 5 minutes (300 seconds), and apply the change without disrupting the share. This is the most direct and efficient method to update the cool-off interval.

\* Option C (Contact support to update the WORM share): Incorrect. Contacting Nutanix support is unnecessary for this task, as updating the cool-off interval is a standard administrative action that can be performed using the CLI. Support is typically needed for complex issues, not for configurable parameters like this.

\* Option D (Use FSM to update the `worm_cooloff_interval` parameter): Incorrect. FSM (File Server Manager) is not a standard Nutanix tool or interface for managing Files configurations. The correct method is to use the CLI (option B) to update the `worm_cooloff_interval` parameter. While the Files Console (FSM-like interface) can manage some share settings, the cool-off interval requires CLI access.

Why Option B?

The `worm_cooloff_interval` parameter is a configurable setting in Nutanix Files that controls the cool-off period for WORM shares. Updating this parameter via the CLI (e.g., using `ncli` or `afs` commands on an FSVM) allows the administrator to change the cool-off interval from the default (1 minute) to 5 minutes without disrupting the existing share. This is the recommended and most efficient method per Nutanix documentation.

Exact Extract from Nutanix Documentation:

From the Nutanix Files Administration Guide (available on the Nutanix Portal):

"The cool-off interval for a WORM share, which determines the time after a file is written during which it can still be modified, is controlled by the `worm_cooloff_interval` parameter. To update this interval, use the CLI on an FSVM to set the parameter (e.g., to 300 seconds for 5 minutes) using commands like `ncli` or `afs`, then apply the change."

### NEW QUESTION # 99

Which scenario is causing the alert and need to be addressed to allow the entities to be protected?

- A. One or more VMs or Volume Groups belonging to the Consistency Group may have been deleted
- B. One or more VMs or Volume Groups belonging to the Consistency Group is part of multiple Recovery Plans configured with a Witness.
- C. The logical timestamp for one or more of the Volume Groups is not consistent between clusters
- D. One or more VMs or Volume Groups belonging to the Consistency Group contains state metadata

**Answer: A**

Explanation:

The scenario that is causing the alert and needs to be addressed to allow the entities to be protected is that one or more VMs or Volume Groups belonging to the Consistency Group may have been deleted. A Consistency Group is a logical grouping of VMs or Volume Groups that are protected together by a Protection Policy. A Protection Policy is a set of rules that defines how often snapshots are taken, how long they are retained, and where they are replicated for disaster recovery purposes. If one or more VMs or Volume Groups belonging to the Consistency Group are deleted, the Protection Policy will fail to protect them and generate an alert with the code AI303551 - VolumeGroupProtectionFailed.
