Huawei Intelligent Vision Certification Training

## HCIP-Intelligent Vision V1.0 Video Site Installation, Deployment, and Commissioning Experiment Guide

ISSUE:1.0

HUAWEI TECHNOLOGIES CO., LTD.

By focusing on how to help you more effectively, we encourage exam candidates to buy our H12-521\_V1.0-ENU study braindumps with high passing rate up to 98 to 100 percent all these years. Our experts designed three versions for you rather than simply congregate points of questions into H12-521\_V1.0-ENU real questions. Efforts conducted in an effort to relieve you of any losses or stress. So our activities are not just about profitable transactions to occur but enable exam candidates win this exam with the least time and get the most useful contents. We develop many reliable customers with our high quality H12-521\_V1.0-ENU Prep Guide. When they need the similar exam materials and they place the second even the third order because they are inclining to our H12-521\_V1.0-ENU study braindumps in preference to almost any other.

Huawei H12-521\_V1.0 Certification Exam consists of multiple-choice questions that test the knowledge and understanding of candidates in the field of intelligent visual applications. H12-521\_V1.0-ENU exam is divided into different sections, each covering a different aspect of intelligent visual applications. H12-521\_V1.0-ENU Exam is designed to be challenging, and candidates are required to demonstrate their mastery of the subject matter. H12-521\_V1.0-ENU exam is also time-limited, with candidates required to complete it within a specific time frame.

**H12-521\_V1.0-ENU Exam Consultant | H12-521\_V1.0-ENU Valid Exam Labs**

There are many merits of our product on many aspects and we can guarantee the quality of our H12-521\_V1.0-ENU practice

engine. Firstly, our experienced expert team compile them elaborately based on the real exam and our H12-521\_V1.0-ENU study materials can reflect the popular trend in the industry and the latest change in the theory and the practice. Secondly, both the language and the content of our H12-521\_V1.0-ENU Study Materials are simple. The language of our H12-521\_V1.0-ENU study materials is easy to be understood and suitable for any learners. You can pass the H12-521\_V1.0-ENU exam only with our H12-521\_V1.0-ENU exam questions.

The HCIP-Intelligent Vision V1.0 certification exam covers a wide range of topics related to intelligent vision, including video processing and analysis, image recognition, machine vision, deep learning, and neural networks. It also covers the latest technologies and trends in the field of intelligent vision, such as edge computing, cloud computing, and big data analytics.

## Huawei HCIP-Intelligent Vision V1.0 Sample Questions (Q22-Q27):

### NEW QUESTION # 22

The "prevention and control circle" in the site planning principle refers to enclosing the target area to form a comprehensively closed prevention and control system. For example, prevention and control circles can be constructed in areas such as inter-city junctions, entrances and exits.

- A. True
- B. False

**Answer: A**

### NEW QUESTION # 23

Which of the following description about the principle of face alignment is incorrect?

- A. After detecting the key points of the face, you need to make progress to extract the key points so that the computer can recognize them
- B. Let the computer automatically generate measured values through the key points found
- C. Face key point detection is to clarify the contours of the face and key parts such as eyebrows, nose, mouth, etc.
- D. The image can be translated, rotated, and zoomed to generate feature values

**Answer: D**

### NEW QUESTION # 24

In light edge networking, the management TOR and business TOR need to be stacked.

- A. True
- B. False

**Answer: A**

### NEW QUESTION # 25

When configuring the bayonet camera, the smart properties of the bayonet camera configured on the platform must be consistent with the actual smart properties of the camera.

The reason is:

- A. If the attributes of the bayonet camera configured on the platform are inconsistent with the attributes of the actual camera, the camera cannot be connected to the platform
- B. If the attributes of the bayonet camera configured on the platform are inconsistent with the attributes of the actual camera, the platform cannot view the camera's live status
- C. If the attributes of the bayonet camera configured on the platform are inconsistent with the attributes of the actual camera, the bayonet captured pictures will not be uploaded to the IVS platform for storage
- D. If the attributes of the bayonet camera configured on the platform are inconsistent with the attributes of the actual camera, the platform cannot record the camera

**Answer: C**

### NEW QUESTION # 26

Before deploying an IVS3800, you'll need to determine the network segment and IP address range of each network plane using the IVS network design tool. Which of the following statements about network design and planning are false?

- A. You are recommended not to change the network segment and IP address range of Inner\_Service. Otherwise, installation operations and capacity expansion may fail.
- B. You are recommended not to change the network segment and IP address range of Outer\_Service. Otherwise, installation operations and capacity expansion may fail.
- C. You are recommended not to change the network segment and IP address range of Outer\_OM. Otherwise, installation operations and capacity expansion may fail.
- **D. You are recommended not to change the network segment and IP address range of InnerJDM. Otherwise, installation operations and capacity expansion may fail.**

**Answer: D**

Explanation:

The correct answer is D because the statement itself is inconsistent with the standard IVS3800 plane naming logic. In IVS deployment, network design is performed per network plane, and the material distinguishes service and management connectivity, for example by referencing service TOR and management TOR, and by using terms such as external service IP address and external management floating IP address for upper-layer connection planning. This clearly supports standard plane naming such as Outer\_Service, Inner\_Service, and Outer\_OM.

The option D uses "InnerJDM", which does not match the naming pattern established by the rest of the network design terminology. In professional IVS planning, this is most likely a typographical corruption of Inner\_OM. Since the question asks which statement is false, the incorrect plane name makes D the false statement as written. The other options are structurally consistent with IVS network-plane design principles, where core predefined service and OM address ranges are typically kept unchanged to avoid deployment and expansion issues. Therefore, D is the false statement.

### NEW QUESTION # 27
