New Cloud-Digital-Leader Exam Review, New Cloud-Digital-Leader Test Preparation

The learning material is open in three excellent formats; Google Cloud-Digital-Leader dumps PDF, a desktop Google Cloud-Digital-Leader dumps practice test, and a web-based Google Cloud-Digital-Leader dumps practice test. Google Cloud-Digital-Leader dumps is organized by experts while saving the furthest down-the-line plan to them for the Google Cloud-Digital-Leader Exam. The sans bug plans have been given to you all to drift through the Google certificate exam.

Google Cloud Digital Leader Certification Exam is designed for individuals who are interested in establishing their expertise in the digital transformation domain. Cloud-Digital-Leader Exam is designed to test the capability of an individual in developing and implementing digital strategies that can enhance business performance. Google Cloud Digital Leader certification exam is suitable for professionals who want to gain a strong understanding of the digital landscape and learn how to leverage digital technologies to drive business growth.

Google Cloud Digital Leader Sample Questions (Q332-Q337):

NEW QUESTION # 332

Which Google Cloud product or feature makes specific recommendations based on security risks and compliance violations?

- A. Google Cloud firewalls
- B. Google Cloud Armor
- C. Cloud Deployment Manager
- **D. Security Command Center**

Answer: D

Explanation:

Reference: <https://cloud.google.com/security-command-center>

Security Command Center is Security and risk management platform for Google Cloud.

NEW QUESTION # 333

How would a global organization benefit from managing their data with Cloud Spanner?

- A. Cloud Spanner replicates data across regions in real time
- B. Cloud Spanner is optimized to ingest unstructured data
- C. Cloud Spanner visualizes and analyzes data in real time
- D. Cloud Spanner is optimized for cold storage

Answer: A

Explanation:

Spanner is Google's scalable, multi-version, globally-distributed, and synchronously-replicated database.

NEW QUESTION # 334

An organization has migrated all workloads to the cloud and is reviewing their cloud security posture. Who is now responsible for securing the physical infrastructure of the data centers?

- A. The cloud service provider
- B. The organization
- C. The organization and the cloud service provider
- D. Third-party security service providers

Answer: A

NEW QUESTION # 335

A retail organization is training a model to recommend products to customers for an ecommerce website. The model was trained on previous purchases, but did not include demographic information on each buyer. What dimension of the data is responsible for the model's poor performance?

- A. Timeliness
- B. Accuracy
- C. Completeness
- D. Validity

Answer: C

Explanation:

Completeness refers to the degree to which all necessary data is present and accounted for. In the context of machine learning, if a model is trained without including all relevant dimensions (such as demographic information in this case), it might lead to poor performance because it lacks important data needed to make accurate predictions.

Option D: Completeness is correct because the lack of demographic information represents incomplete data.

The absence of this data dimension could prevent the model from learning patterns that are influenced by demographic factors, thereby impacting its overall effectiveness.
