Docker Practice DCA Online Exam Pass Certify | DCA: Docker Certified Associate (DCA) Exam

One way to makes yourself competitive is to pass the DCA certification exams. Hence, if you need help to get certified, you are in the right place. ITexamReview offers the most comprehensive and updated braindumps for DCA's certifications. To ensure that our products are of the highest quality, we have tapped the services of DCA experts to review and evaluate our DCA certification test materials. In fact, we continuously provide updates to every customer to ensure that our DCA products can cope with the fast changing trends in DCA certification programs.

Docker Certified Associate (DCA) Exam Sample Questions (Q22-Q27):

NEW QUESTION # 22

You add a new user to the engineering organization in DTR.

Will this action grant them read/write access to the engineering/api repository?

Solution: Add them to a team in the engineering organization that has read/write access to the engineering/api repository.

- A. No
- B. Yes

Answer: A

Explanation:

= I cannot give you a comprehensive explanation, but I can tell you that the question is about Docker Trusted Registry (DTR), which is a secure and scalable image storage solution for Docker Enterprise¹. DTR allows you to create organizations and teams to manage access to your repositories². Adding a new user to an organization does not automatically grant them access to any repository. You

need to assign them to a team that has the appropriate permissions for the repository you want them to access³. Therefore, the solution suggests adding them to a team in the engineering organization that has read/write access to the engineering/api repository. You will need to understand how DTR works and how to configure access control for repositories to answer this question correctly. Reference: You can find some useful references for this question in the following links:
Docker Trusted Registry overview
Create and manage organizations and teams
Manage access to repositories

NEW QUESTION # 23

You want to create a container that is reachable from its host's network. Does this action accomplish this?

Solution: Use --link to access the container on the bridge network.

- A. No
- B. Yes

Answer: A

Explanation:

Explanation

= The action of using --link to access the container on the bridge network does not accomplish the goal of creating a container that is reachable from its host's network. The --link option allows you to connect containers that are running on the same network, but it does not expose the container's ports to the host¹. To create a container that is reachable from its host's network, you need to use the --network host option, which attaches the container to the host's network stack and makes it share the host's IP address².

Alternatively, you can use the --publish or -p option to map the container's ports to the host's ports³.

NEW QUESTION # 24

Will this command ensure that overlay traffic between service tasks is encrypted?

Solution: docker network create -d overlay -o encrypted=true <network-name>

- A. Yes
- B. No

Answer: A

Explanation:

The command docker network create -d overlay -o encrypted=true <network-name> will ensure that overlay traffic between service tasks is encrypted. This command creates an overlay network with the encryption option enabled, which means that Docker will create IPSEC tunnels between all the nodes where tasks are scheduled for services attached to the overlay network. These tunnels use the AES algorithm in GCM mode and manager nodes automatically rotate the keys every 12 hours¹. This way, the data exchanged between containers on different nodes on the overlay network is secured. Reference:

Overlay network driver

NEW QUESTION # 25

Will this configuration achieve fault tolerance for managers in a swarm?

Solution: an odd number of manager nodes, totaling more than two

- A. Yes
- B. No

Answer: A

NEW QUESTION # 26

What is the purpose of a client bundle in the Universal Control Plane?

- A. Provide a new user instructions for how to login to the Universal Control Plane
- **B. Authenticate a user using client certificates to the Universal Control Plane**
- C. Provide a user with a Docker client binary compatible with the Universal Control Plane
- D. Group multiple users in a team in the Universal Control Plane

Answer: B

NEW QUESTION # 27

.....

We have the first-rate information safety guarantee system for the buyers who buy the DCA questions and answers of our company, we can ensure that the information of your name, email, or product you buy. We respect the private information of every customer, and we won't send the junk information to you to bother. Besides, you will get DCA Questions and answers downloading link within ten minutes, and our system will send you the update version to your mailbox.
