NSE5_FNC_AD-7.6 Reliable Test Materials 100% Pass | Valid Fortinet Fortinet NSE 5 - FortiNAC-F 7.6 Administrator Reliable Exam Cram Pass for sure

Our NSE5_FNC_AD-7.6 training prep was produced by many experts, and the content was very rich. At the same time, the experts constantly updated the contents of the study materials according to the changes in the society. The content of our NSE5_FNC_AD-7.6 study guide is definitely the most abundant. Before you go to the exam, our NSE5_FNC_AD-7.6 Exam Questions can provide you with the simulating exam environment. This not only includes the examination process, but more importantly, the specific content of the exam. In previous years' examinations, the hit rate of NSE5_FNC_AD-7.6 learning quiz was far ahead in the industry.

The Fortinet NSE 5 - FortiNAC-F 7.6 Administrator (NSE5_FNC_AD-7.6) questions are in use by many customers currently, and they are preparing for their best future daily. Even the students who used it in the past to prepare for the Fortinet Certification Exam have rated our practice questions as one of the best. You will receive updates till 365 days after your purchase, and there is a 24/7 support system that assists you whenever you are stuck in any problem or issues.

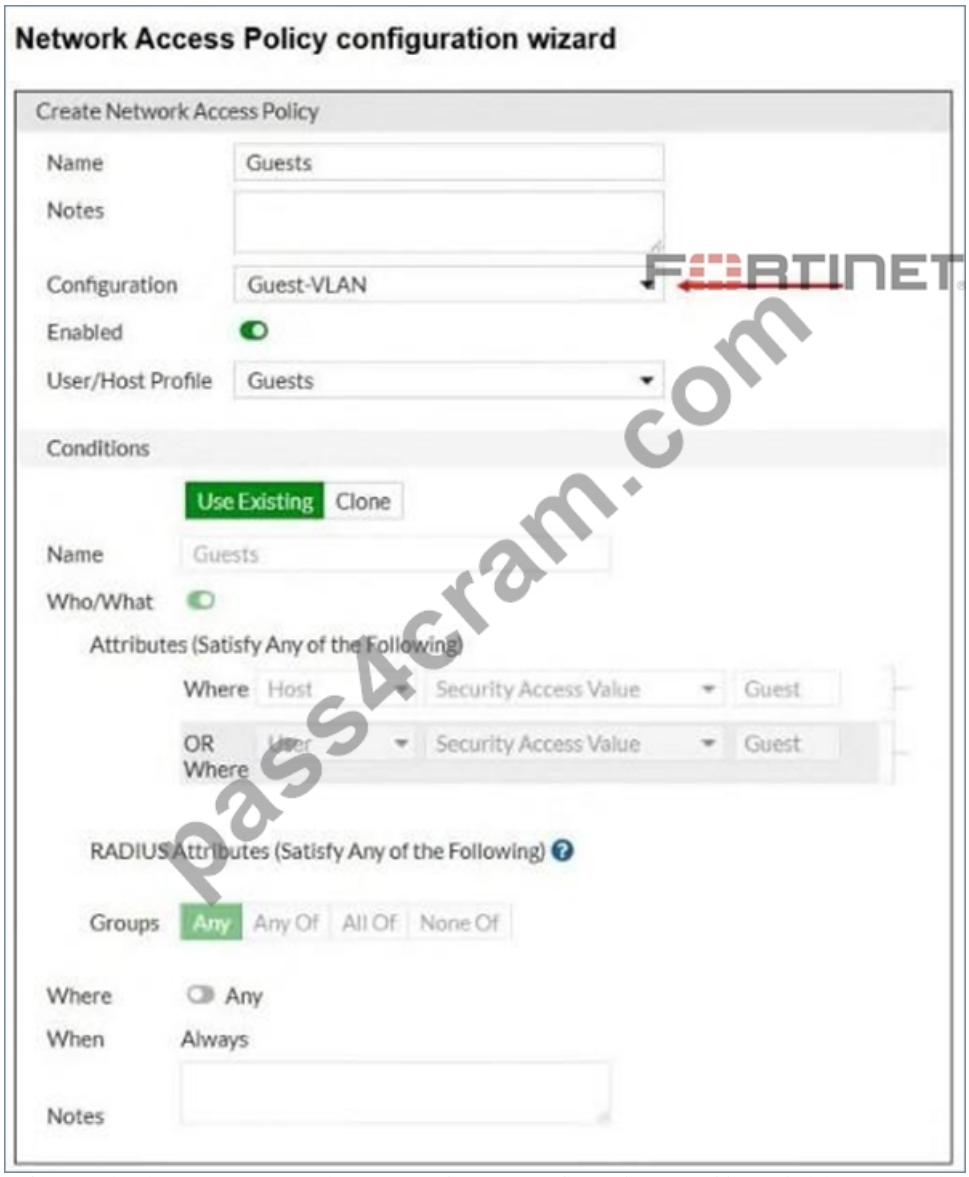
What Makes Fortinet NSE5_FNC_AD-7.6 Exam Dumps Different?

Only to find ways to success, do not make excuses for failure. To pass the Fortinet NSE5_FNC_AD-7.6 Exam, in fact, is not so difficult, the key is what method you use. Pass4cram's Fortinet NSE5_FNC_AD-7.6 exam training materials is a good choice. It will help us to pass the exam successfully. This is the best shortcut to success. Everyone has the potential to succeed, the key is what kind of choice you have.

Fortinet NSE 5 - FortiNAC-F 7.6 Administrator Sample Questions (Q11-Q16):

NEW QUESTION # 11
Refer to the exhibit.



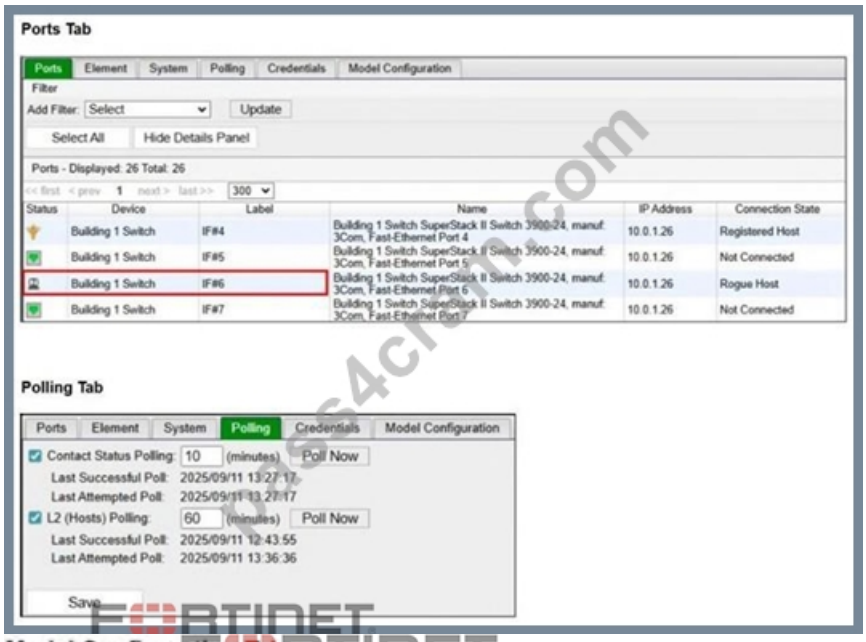
When configuring guest access using a network access policy, where would an administrator configure the Guest-VLAN value?

- A. In the Model configuration
- B. In the User/Host profile
- C. In the Guest portal configuration
- D. In the Guest template

Answer: A

Explanation:
The Guest-VLAN value is defined within the switch Model configuration, where VLAN mappings and enforcement actions are configured. The network access policy references this configuration to apply the appropriate VLAN when the policy conditions are met.

NEW QUESTION # 12
Refer to the exhibits.



Model Configuration Tab

An administrator is troubleshooting visibility issues on a modeled switch. The switch is configured to use link traps and to provision hosts based on network access policies. The administrator is seeing hosts on ports with no hosts connected and not seeing hosts on ports where hosts are known to be connected.
What is the most likely cause?

- A. The logical networks are set to deny.
- B. The credentials are incorrect.
- C. The host has uninstalled the FortiNAC-F agent.
- D. The switch cannot be contacted by FortiNAC-F.

Answer: B

Explanation:
Incorrect switch credentials prevent FortiNAC-F from successfully performing SNMP-based polling (such as layer 2 host learning) needed to accurately learn and clear hosts per port. As a result, FortiNAC-F displays stale or missing host-to-port associations even though link traps are enabled.

NEW QUESTION # 13
An administrator has created several device profiling rules and evaluated all existing devices in the database. Some of the devices appear in the profiled devices view because they matched a rule, but they remain unknown and the registration column in the profiled devices view shows

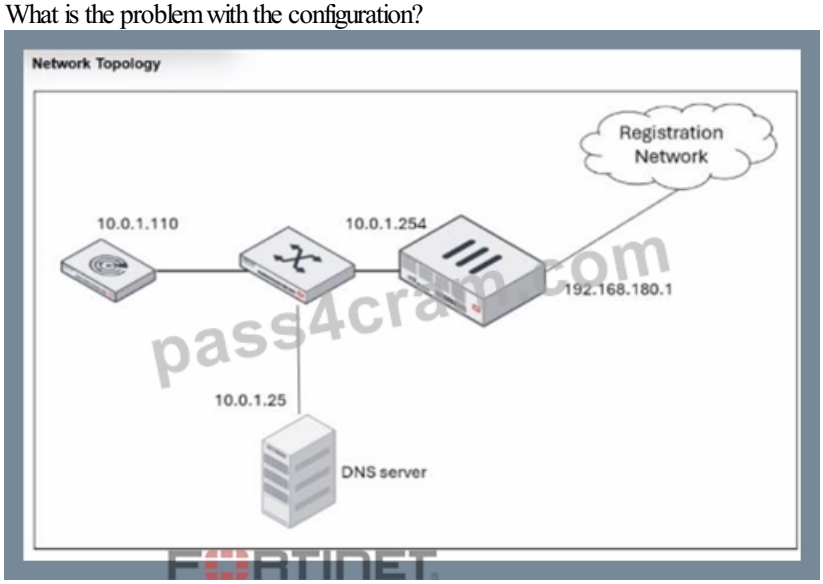
"No".
What is the most likely cause?

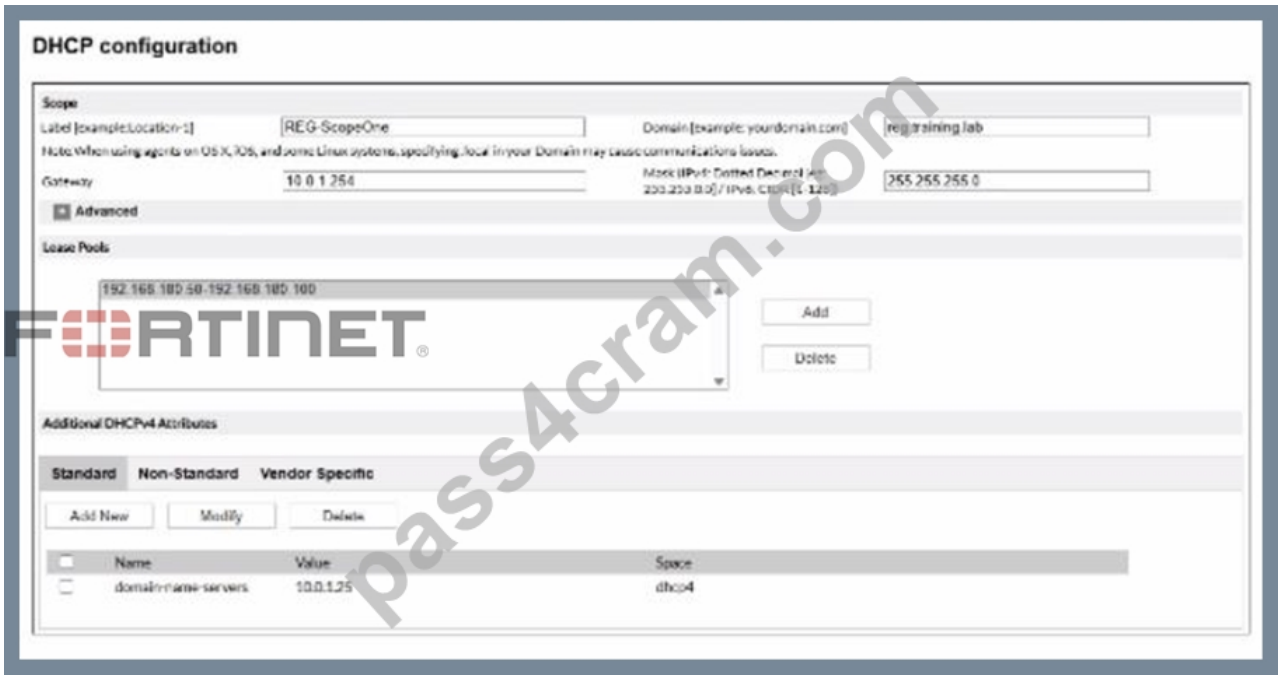
- A. The confirm device profiling rule option is not enabled.
- B. The devices match more than one device profiling rule.
- C. The devices have persistent agents installed, and the point of connection has PA optimization enabled.
- D. The device profiling rule has registration set to manual.

Answer: A

Explanation:
In FortiNAC-F, Device Profiling Rules are used to automatically identify and categorize devices (such as IP cameras, printers, or IoT devices) based on fingerprints like DHCP fingerprints, OIDs, or MAC prefixes. When a device matches a rule, it appears in the Profiled Devices view.
However, matching a rule does not automatically register the device in the database unless the rule is configured to do so. If the devices appear in the view but remain "Unknown" and show
"No" in the registration column, it indicates that the "Confirm" (or "Auto-register") action has not been triggered. In the Device Profiling Rule configuration, there is a setting called "Allow Auto- Approval" or "Confirm". If this is not enabled, the system identifies the device but waits for an administrator to manually approve the match before changing the host status from "Unknown" to "Registered".
This is a common "safety" configuration used during the initial deployment phase to ensure that the profiling rules are accurate before the system begins automatically granting network access based on those matches.
"If a device matches a rule but is not registered, check the rule configuration. The Confirm option (within the Method or Rule settings) determines if the system automatically registers the device upon a match. If Confirm is not enabled, the device will remain in the 'Profiled' state with a registration status of 'No' until an administrator manually promotes the device."

NEW QUESTION # 14
Refer to the exhibit. An administrator has configured the DHCP scope for a registration isolation network, but the isolation process isn't working.
What is the problem with the configuration?





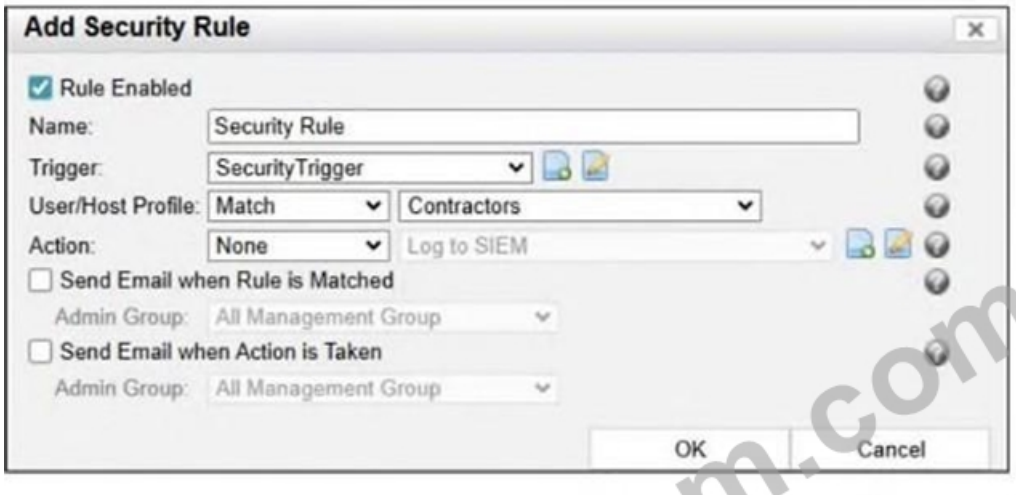
- A. The domain name server designation is incorrect.
- B. The lease pool does not contain a complete subnet.
- C. The label uses a system-reserved value.
- D. The gateway defined for the scope is incorrect.

Answer: D

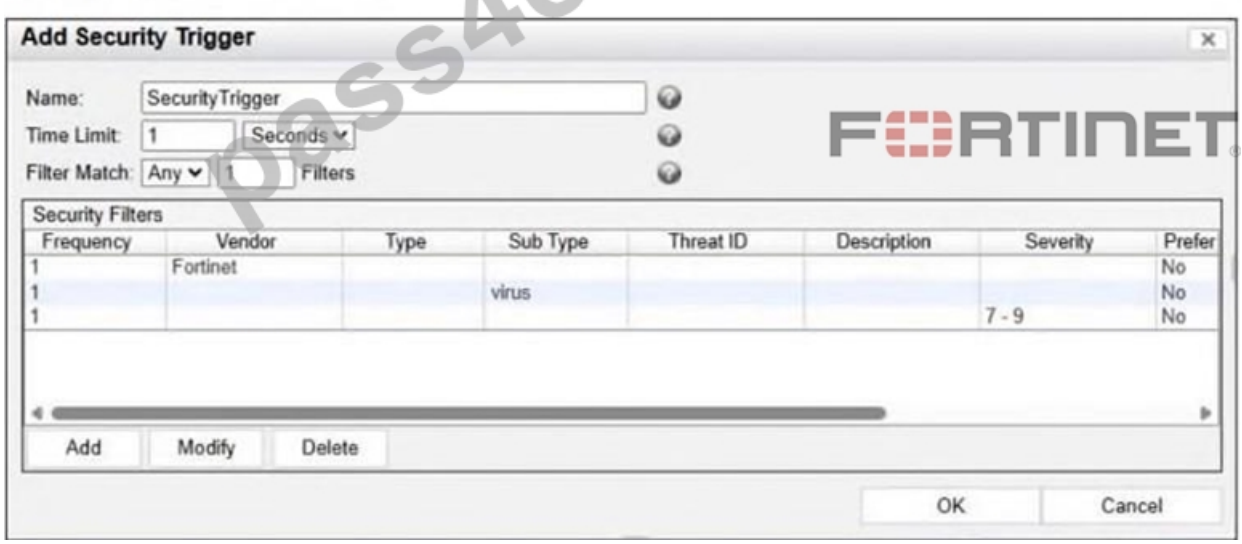
Explanation:
In a FortiNAC-F deployment, the configuration of the DHCP scope for isolation networks (Registration, Remediation, etc.) must perfectly align with the underlying network infrastructure to ensure that isolated hosts can communicate with the FortiNAC appliance. In the provided exhibits, there is a clear discrepancy between the DHCP configuration and the Network Topology.
As shown in the "Network Topology" exhibit, the Registration Network resides on a router interface (or sub-interface) with the IP address 192.168.180.1. This address represents the default gateway for any host placed into the Registration VLAN. However, the "DHCP configuration" exhibit shows the scope "REG-ScopeOne" configured with a Gateway of 10.0.1.254. This 10.0.1.254 address belongs to the management/service network (port2 of FortiNAC), not the registration subnet. If a host in the Registration VLAN receives this incorrect gateway via DHCP, it will attempt to send all off-link traffic to an unreachable IP, preventing it from loading the Captive Portal or communicating with the FortiNAC server.
According to the FortiNAC-F Configuration Wizard Reference, when defining a Layer 3 network scope, the "Gateway" field must contain the IP address of the router interface that acts as the gateway for that specific isolation VLAN. The FortiNAC appliance itself usually sits on a different subnet, and traffic is directed to it via the router's DHCP Relay (IP Helper) and DNS redirection.
"When configuring scopes for a Layer 3 network, the Gateway value must be the IP address of the router interface for that subnet. This allows the host to reach its local gateway to route traffic.
If the gateway is misconfigured, the host will be unable to reach the FortiNAC eth1/port2 interface for registration... Ensure the Gateway matches the network topology for the isolation VLAN."

NEW QUESTION # 15
Refer to the exhibits.

Security Rule configuration



Security Trigger configuration



Given the current configuration, what would happen if a contractor triggered two of the defined security filters?

- A. Two security events would be generated, but no security alarm would be generated.
- B. Three security events and one security alarm would be generated.
- C. A security alarm and two security events would be generated.
- D. A security event and a security alarm would be generated.

Answer: B

Explanation:
Each matched security filter generates its own security event. Since the trigger is configured to match any one filter within the defined time limit, multiple matched filters will generate multiple events, but only one security alarm is created when the security rule condition is satisfied.

NEW QUESTION # 16
