Free PDF Citrix - High Hit-Rate 1Y0-204 - Citrix Virtual Apps and Desktops 7 Administration Latest Exam Tips

You don't need to wait days or weeks to get your performance report. The software displays the result of the Citrix 1Y0-204 practice test immediately, which is an excellent way to understand which area needs more attention. Dupleader Citrix 1Y0-204 exam dumps save your study and preparation time. Our experts have added hundreds of Citrix Virtual Apps and Desktops 7 Administration (1Y0-204) questions similar to the real exam. You can prepare for the Citrix Virtual Apps and Desktops 7 Administration (1Y0-204) exam dumps during your job. You don't need to visit the market or any store because Dupleader Citrix Virtual Apps and Desktops 7 Administration (1Y0-204) exam questions are easily accessible from the website. You can try the Citrix 1Y0-204 exam dumps demo before purchasing.

Citrix Virtual Apps and Desktops 7 Administration Sample Questions (Q13-Q18):

NEW QUESTION # 13

Which three methods can a Citrix Administrator choose from when creating a Featured App Group for a set of applications? (Choose three.)

- **A. Application category**
- **B. Application names**
- C. Installed locally

- D. Keyword
- E. Delivery Group

Answer: A,B,D

Explanation:

Explanation

You can create product featured app groups for your end users that are related to or fit in a specific category.

For example, you can create a Sales Department featured app group containing applications that are used by that department. You can define featured apps in the StoreFront administration console by using application names or by using keywords or application categories that were defined in the Studio console.

NEW QUESTION # 14

Which Citrix Director view will allow a Citrix Administrator to view data on the current CPU, as well as memory and disk latency for a machine running the Virtual Delivery Agent (VDA)?

- A. Load Evaluator Index
- B. Resource Utilization
- C. Capacity Management
- D. Machine Utilization

Answer: B

Explanation:

Explanation

The Resource Utilization view in Citrix Director accesses historical trend information of CPU, memory, and disk latency for each machine running the VDA. This view helps the administrator to monitor the resource consumption and performance of the machines1
1: Monitor historical trends across a site | Director

NEW QUESTION # 15

A customer is using Citrix Virtual Apps and Desktops 2402 LTSR. What will happen when a client-side printer is added or removed while a Citrix HDX session is active?

- A. Users will need to manually update their printer list in the session
- B. The session remains unaffected by changes to client-side printers
- C. The system dynamically adjusts in-session auto-created printers to reflect the changes in client-side printers
- D. The system will not adjust in-session auto-created printers based on client-side printer changes

Answer: C

Explanation:

In Citrix Virtual Apps and Desktops 2402 LTSR, the printing subsystem supports dynamic printer enumeration, which allows Citrix to automatically detect changes to client-side printers while an HDX session is running. This functionality is part of the Citrix Printing Virtual Channel.

When a user:

- * Adds a printer on their endpoint
- * Removes a printer on their endpoint

Citrix automatically updates the list of auto-created printers within the active session. The user does not need to log off, refresh, or perform any manual action. The VDA receives updated information from the Workspace app (or Receiver), and the in-session printer list adjusts accordingly.

Why the other choices are incorrect:

- * A: The session is affected; the printer list updates dynamically.
- * B: User intervention is not required.
- * D: Citrix does adjust the in-session printer list - dynamic support is built into the printing subsystem.

NEW QUESTION # 16

Scenario: A Citrix Administrator has given permissions to team members to access their own admin partition, so they can add resources for different departments and manage them without making changes to the default Citrix ADC partition and configuration. One team member was trying to use the command-line interface to troubleshoot an authentication issue and could NOT use `aaad.debug`. However, the team member has full permissions on the admin partition. What can be the cause of this issue?

- A. The team member does NOT have permission to use the CLI.
- B. The team member is NOT using the CLI correctly.
- C. The team member does NOT have Shell access by design.
- D. The team member needs to troubleshoot the issue from the GUI.

Answer: C

NEW QUESTION # 17

A Citrix Administrator is configuring a Citrix Virtual Desktops Site for use with a mirrored SQL Server database. Which setting in SQL is important that the administrator configure manually when creating an empty database on the principal SQL Server?

- A. Collation Setting
- B. Database Type Setting
- C. SQL Version Number
- D. SQL Mirroring Version

Answer: A

Explanation:

When deploying a Citrix Virtual Apps and Desktops Site with SQL database mirroring, Citrix requires that the collation setting used by the Site database must be explicitly set and must match the required Citrix standard. Citrix documentation states that the database collation must be case-insensitive and consistent between the principal and mirror SQL servers.

This collation is not automatically assigned by SQL Server when you create an empty database for mirroring. Therefore, administrators must manually configure the correct collation during initial creation. If the collation does not match Citrix requirements, the Site creation or Controller functionality may fail.

Other listed options (SQL version, database type, mirroring version) do not require manual configuration at database-creation time for Citrix Sites.
