Realistic PEGACPRSA22V1 Free Study Material & Accurate Pegasystems Certification Training - Effective Pegasystems Certified Pega Robotics System Architect 22

All points of questions are correlated with the newest and essential knowledge. The second one of PEGACPRSA22V1 test guide is emphasis on difficult and hard-to-understand points. Experts left notes for your reference, and we believe with their notes things will be easier. In addition, the new supplementary will be sent to your mailbox if you place order this time with beneficial discounts at intervals. So our PEGACPRSA22V1 Exam Questions mean more intellectual choice than other practice materials.

Pegasystems Certified Pega Robotics System Architect 22 Sample Questions (Q81-Q86):

NEW QUESTION # 81

Your log on automation is failing and you cannot proceed because the Submit button is not enabled. After searching the HTML code, you discover that the Submit button is enabled only after the Password field experiences a key press.
How do you resolve the automation issue?

- A. On the Submit button, add a RaiseEvent method with onkeypress.
- B. On the Submit button, add a Disabled property and set it to True.
- C. On the Password field, add a RaiseEvent method with onkeypress.
- D. On the Password field, add an Enabled property and set it to True.

Answer: D

NEW QUESTION # 82
You must configure an application to store encrypted login credentials in the user's local profile. You also need to automate the login using the encrypted credentials. How do you fulfill this requirement without creating an automation?

- A. Set the necessary application credential properties before interrogating the target controls.
- B. Create a robot activity that performs the application login.
- C. Interrogate the target controls and create a script to perform the login functionality.
- D. Interrogate the target controls and set the necessary application credential properties.

Answer: D

Explanation:
Comprehensive and Detailed Explanation From Pega Robotics System Exact Extract:
In Pega Robot Studio, the Credential Manager is designed to securely store user credentials (such as usernames and passwords) in an encrypted form within the user's local profile. When properly configured, Pega Robotics can automatically log in to target applications without creating a separate automation.
From the Pega Robotics System Design and Implementation Guide (Application Configuration and Credential Management section):
"When an application requires credential-based authentication, developers can configure the application's login controls during interrogation and assign the appropriate credential properties (Username and Password).
Once defined, credentials are stored securely in the user's local profile and automatically retrieved and decrypted during runtime to perform the login without explicit automation logic." Detailed Reasoning:
* During interrogation, the login controls (such as username and password fields) are identified and linked to the credential properties of the application object.
* Pega Robotics automatically handles the retrieval and secure decryption of credentials stored in the local user profile at runtime.
* This eliminates the need for any manual automation steps or scripts for logging in.
Option Analysis:
* A. Incorrect - Robot activities are server-executed tasks, not used for local application authentication.
* B. Incorrect - Credentials must be configured after interrogating target controls to map them correctly.
* C. Correct - Interrogating the login fields and setting the application credential properties allows Pega Robotics to securely manage and automate login automatically.
* D. Incorrect - Creating a script defeats the purpose of using the built-in credential manager.
Thus, Option C is the correct method for configuring automatic login using encrypted credentials.
Reference:Extracted from Pega Robotics System Design and Implementation Guide, Credential Manager and Application Authentication section (Pega Robotics 19.1 and later).

NEW QUESTION # 83
An automation requires the web adapter to attach to a running instance of Internet Explorer.
How do you achieve this requirement?

- A. Configure the web adapter and set the StartMethod property to MonitorAll.
- B. Configure the web adapter and set the StartMehod property to Attach.
- C. The web adapter cannot connect to a running instance.
- D. Configure the Universal Web adapter and set the StartMethod property to MonitorAll.

Answer: A

NEW QUESTION # 84
Pega Robotic Coding Standards suggest organization of project components. You have added the _GC_CRM project item to the CRMPrj.
Which three components are recommended to be placed in the _GC_CRM project item? (Choose three.)
