

Juniper JN0-224 New APP Simulations & JN0-224 Top Exam Dumps

2026 Latest Pass4guide JN0-224 PDF Dumps and JN0-224 Exam Engine Free Share: <https://drive.google.com/open?id=11qMWkifoLWHhzDJs-mxUXBSu86wPJufk>

If you want to start your learning as quickly as possible, just choose us, we can do this for you. Our JN0-224 study materials is famous for instant download, and you can get the downloading link and password within ten minutes after purchasing, if you don't receive, you can ask our service stuff for help. Besides, JN0-224 Exam Dumps of us contain both questions and answers, and you can check the answer when you finish practicing. JN0-224 study materials are also have certain questions and it will help you to pass the exam successfully.

Juniper JN0-224 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> NETCONF XML API: This domain focuses on XML syntax, XPath expressions, NETCONF protocol, and XML API functionality for programmatic device configuration and communication.
Topic 2	<ul style="list-style-type: none"> Python PyEZ: This domain examines Python programming with PyEZ library for Junos automation, including JSNAPy, Jinja2 templates, RPC calls, exception handling, and device configuration management.
Topic 3	<ul style="list-style-type: none"> Junos Automation Stack and DevOps Concepts: This domain covers fundamental automation tools, frameworks, APIs, and DevOps culture applicable to Junos platform operations and network management.
Topic 4	<ul style="list-style-type: none"> Data Serialization: This domain addresses YAML and JSON formats used for structured data representation and exchange in network automation workflows.
Topic 5	<ul style="list-style-type: none"> Rest API: This domain covers Junos REST API implementation, REST API Explorer tool, and cURL usage for HTTP-based device management and configuration.

Quiz Juniper - Accurate JN0-224 - Automation and DevOps, Associate (JNCIA-DevOps) New APP Simulations

As is known to us, a suitable learning plan is very important for all people. For the sake of more competitive, it is very necessary for you to make a learning plan. We believe that our JN0-224 actual exam will help you make a good learning plan. You can have a model test in limited time by our JN0-224 Study Materials, if you finish the model test, our system will generate a report according to your performance. And in this way, you can have the best pass percentage on your JN0-224 exam.

Juniper Automation and DevOps, Associate (JNCIA-DevOps) Sample Questions (Q15-Q20):

NEW QUESTION # 15

You are asked to use the REST API to retrieve interface configuration information from your Junos device. You decide to use a cURL HTTP GET command to retrieve this information.

In this scenario, which two statements are correct? (Choose two.)

- A. You must include the authentication information with each request.
- B. You can retrieve this data in HTML or JSON formats.
- C. You can retrieve this data in XML or JSON formats.
- D. You must have SSH enabled on the Junos device.

Answer: A,C

Explanation:

When using the REST API to retrieve interface configuration information from a Junos device:

Data Formats (C): The information can be retrieved in XML or JSON formats. These are the two standard data formats supported by the Junos REST API for representing configuration and operational data.

Authentication (D): For each HTTP request, especially when using tools like cURL, authentication information must be included. This is typically done using basic authentication (username and password) or an authentication token.

Option A is incorrect because HTML is not a supported format for REST API data retrieval in Junos, and Option B is incorrect because SSH is not required for REST API requests; the REST API typically uses HTTP/HTTPS.

Reference:

Junos REST API Documentation: Details the data formats (XML, JSON) supported by the Junos REST API and the need for authentication.

cURL Usage with REST API: Provides examples of how to use cURL with Junos REST API, including the necessity of providing authentication.

NEW QUESTION # 16

Which two statements about NETCONF layers are correct? (Choose two.)

- A. NETCONF layers use the messages layer to send RPCs to a remote NETCONF server.
- B. NETCONF layers use the operations layer to send RPCs to a remote NETCONF server.
- C. NETCONF layers use the operations layer to receive RPCs from a remote NETCONF server.
- D. NETCONF layers use the messages layer to receive RPCs from a remote NETCONF server.

Answer: A,C

Explanation:

NETCONF (Network Configuration Protocol) is a standard protocol defined for managing network devices. NETCONF operates in a layered architecture, which includes the following key layers:

Operations Layer: This layer deals with the actual operations like <get-config>, <edit-config>, <copy-config>, and others. It receives RPC (Remote Procedure Call) requests from a remote NETCONF client and processes these requests.

Messages Layer: This layer is responsible for encoding the RPCs and sending them over the network. It handles the communication between the NETCONF client and server, ensuring that the RPC messages are correctly formatted (usually in XML) and transmitted.

Statement B is correct because the Messages layer is responsible for sending RPCs to a remote NETCONF server.

Statement C is correct because the Operations layer is where the NETCONF server receives and processes the RPCs sent by the client.

Supporting Reference:

Juniper Networks NETCONF Documentation: Provides a detailed breakdown of the NETCONF protocol layers and their functions.

RFC 6241: The official specification for NETCONF, which describes the layered architecture, including the operations and messages layers.

NEW QUESTION # 17

Which statement is correct about DevOps?

- A. DevOps is meant to unite the development, operations, and other teams to improve project collaborations.
- B. DevOps is meant to define and restrict the development and operations tools used for a project.
- C. DevOps is a collection of strict guidelines that promotes the project completion over all other aspects.
- D. DevOps is a defined standard written and maintained by the IEEE standards group.

Answer: A

Explanation:

DevOps is a set of practices, tools, and cultural philosophies that aims to integrate and automate the processes between software development and IT operations teams. The primary goal of DevOps is to shorten the systems development life cycle and provide continuous delivery with high software quality.

Option C is correct because DevOps fundamentally focuses on breaking down the silos between development and operations teams, fostering a collaborative environment where these teams work together throughout the entire software lifecycle. This collaboration extends to other stakeholders, including quality assurance (QA), security, and more, to ensure that the product is continuously delivered and improved based on real-time feedback.

DevOps promotes a cultural shift where teams are no longer isolated but work together to share responsibilities, which leads to increased efficiency, faster problem resolution, and a more streamlined deployment process. This culture of collaboration is supported by various automation tools and practices such as Continuous Integration (CI), Continuous Deployment (CD), Infrastructure as Code (IaC), and automated testing.

Supporting Reference:

Juniper Networks Automation and DevOps Documentation: This documentation emphasizes the importance of collaboration between development and operations teams to streamline processes and improve efficiency, aligning perfectly with the principles of DevOps.

"The DevOps Handbook" by Gene Kim, Patrick Debois, John Willis, and Jez Humble: This book provides an in-depth look into how DevOps practices enhance collaboration and lead to faster, more reliable software delivery.

IEEE and Industry Standards: While DevOps practices are widely adopted, they are not defined or maintained by IEEE or any other formal standards body, which is why option D is incorrect.

NEW QUESTION # 18

Which process is responsible for XML automation requests?

- A. rpd
- B. jsrpd
- C. jsd
- D. mgd

Answer: D

Explanation:

The mgd (Management Daemon) process in Junos is responsible for handling XML automation requests. This daemon manages the configuration and operational commands received via NETCONF, which uses XML for data exchange. The mgd process parses the XML data and applies the necessary configuration or retrieves the requested information.

Option B is correct because mgd is the process that handles XML-based requests in Junos.

Options A (jsrpd), C (rpd), and D (jsd) are incorrect because they are responsible for different functions, such as routing protocols and services, not XML automation.

Supporting Reference:

Juniper Networks Management Daemon (mgd) Documentation: Provides an overview of the responsibilities of the mgd process, including handling XML requests.

NEW QUESTION # 19

You want to perform a dry run on the myPlays playbook and use a custom inventory file called myRouters.ini.

Which Ansible command would you use in this scenario?

- A. `ansible-playbook myPlays -extra-vars "dry run=True" myRouters.ini`
- B. `ansible-playbook myPlays -limit myRouters`
- C. `ansible-playbook myPlays -extra-vars "inventory_file=myRouters .ini"`
- D. `ansible-playbook myPlays --check -i myRouters.ini`

Answer: C

NEW QUESTION # 20

.....

Do you long to get the JN0-224 certification to improve your life? Are you worried about how to choose the JN0-224 learning product that is suitable for you? If your answer is yes, we are willing to tell you that you are a lucky dog, because you meet us, it is very easy for us to help you solve your problem. The JN0-224 latest question from our company can help people get their JN0-224 certification in a short time.
