Hot ISO-IEC-27001-Foundation Questions - ISO-IEC-27001-Foundation Practice Braindumps

PDFTorrent provides exam dumps designed by experts to ensure that the candidates' success. This means that there is no need to worry about your results since everything ISO-IEC-27001-Foundation exam dumps are verified and updated by professionals. APMG-International ISO-IEC-27001-Foundation Exam are made to be a model of actual exam dumps. Therefore, it can help users to feel in a real exam such as a real exam. This will improve your confidence and lessen stress to be able to pass the actual tests.

APMG-International ISO/IEC 27001 (2022) Foundation Exam Sample Questions (Q42-Q47):

NEW QUESTION # 42

Which output is a required result from risk analysis?

- A. Determined levels of risk
- B. Risk acceptance criteria
- C. Risk treatment control options
- D. Prioritized risks for treatment

Answer: A

Explanation:

Clause 6.1.2 (d) states that during risk analysis, the organization shall:

* "assess the potential consequences that would result if the risks identified... were to materialize;"

* "assess the realistic likelihood of the occurrence of the risks identified;"

* "determine the levels of risk."

This makes it clear that the required output of risk analysis is the determined levels of risk. Risk acceptance criteria (A) are set earlier in 6.1.2(a), treatment control options (C) belong to 6.1.3, and prioritization (D) is part of risk evaluation (6.1.2 e). Therefore, the verified correct output is B: Determined levels of risk.

NEW QUESTION # 43

Who is required to ensure that staff are supported so that they can contribute to the information security management system?

- A. ISO/IEC 27001 practitioners within the organization
- B. Management responsible for each area of operation
- C. Auditors who audit each area of operation
- **D. Top management of the organization**

Answer: D

Explanation:

Clause 5.1 (Leadership and Commitment) requires that:

"Top management shall demonstrate leadership and commitment with respect to the information security management system by... ensuring that the resources needed for the ISMS are available... and supporting persons to contribute to the effectiveness of the ISMS." This makes it explicit that top management has the responsibility to ensure personnel are supported so they can contribute to the ISMS. Option B (line management) may provide local support, but ultimate accountability rests with top management. Auditors (C) only evaluate compliance, not provide support.

Practitioners (D) help implement, but they don't bear formal responsibility under the standard.

Thus, the verified answer is A: Top management of the organization.

NEW QUESTION # 44

Identify the missing words in the following sentence.

The organization shall establish, implement, maintain and [?] an information security management system, including the processes needed and their interactions, in accordance with the requirements of this document.

- A. enforce standards for
- **B. continually improve**
- C. report on
- D. communicate the importance of

Answer: B

Explanation:

Clause 4.4 of ISO/IEC 27001:2022 states:

"The organization shall establish, implement, maintain and continually improve an information security management system, including the processes needed and their interactions, in accordance with the requirements of this document." This requirement highlights that an ISMS is not static; it must evolve continuously to adapt to new risks, technologies, and business changes. Options A, C, and D are not mentioned in the clause. The continual improvement cycle is central to ISO standards, aligning with the Plan-Do-Check-Act (PDCA) model.

Thus, the missing words are "continually improve."

NEW QUESTION # 45

Which attribute is NOT a required focus of continual ISMS improvement?

- A. Adequacy
- B. Effectiveness
- C. Suitability

- **D. Importance**

Answer: D

Explanation:

Clause 10.2 (Continual Improvement) specifies that the organization must "continually improve the suitability, adequacy and effectiveness of the information security management system." This makes it clear that three attributes are explicitly required to be addressed:

- * Suitability: ensuring the ISMS continues to meet organizational needs in changing contexts.
- * Adequacy: ensuring the ISMS covers the necessary scope and provides sufficient control coverage.
- * Effectiveness: ensuring the ISMS achieves intended outcomes in protecting information security.

The word "importance" is not part of the continual improvement requirement. Importance is implicit in prioritization of risks and actions, but it is not a required continual improvement attribute in ISO/IEC 27001.

Therefore, option D: Importance is the correct choice as it is not specified.

This distinction reinforces that continual improvement is not about subjective importance, but about systematic enhancement of the ISMS' suitability, adequacy, and effectiveness.

NEW QUESTION # 46

What is a requirement for a corrective action made in response to a nonconformity?

- **A. They are appropriate to the effects of the nonconformity**
- B. They always eliminate the cause of the nonconformity
- C. They do NOT change the organization's information security policies
- D. They are proportionate to the likelihood of the nonconformity recurring

Answer: A

Explanation:

Clause 10.1 (Nonconformity and corrective action) specifies:

"The organization shall react to the nonconformity and, as applicable: take action to control and correct it; deal with the consequences; evaluate the need for action to eliminate the cause(s)..."

Corrective actions shall be appropriate to the effects of the nonconformities encountered." This confirms option B. Option A is inaccurate-ISO requires actions appropriate to effects, not probability alone. Option C is false-policies may need updating to correct nonconformities. Option D is incorrect, as not every cause can always be eliminated; residual issues may exist.

Thus, the verified requirement is B.

NEW QUESTION # 47
