Absolute Your Exam Preparation With Netskope NSK300 Dumps

We are a team of certified professionals with lots of experience in editing NSK300 exam questions. Every candidate should have more than 11 years' education experience in this field of NSK300 study guide. We have rather a large influence over quite a quantity of candidates. We are more than more popular by our high passing rate and high quality of our NSK300 Study Guide. Our education team of professionals will give you the best of what you deserve. If you are headache about your NSK300 certification exams, our NSK300 training materials will be your best select.

Netskope Certified Cloud Security Architect Sample Questions (Q59-Q64):

NEW QUESTION # 59

You are architecting a Netskope steering configuration for devices that are not owned by the organization. The users could be either on-premises or off-premises and the architecture requires that traffic destined to the company's instance of Microsoft 365 be steered to Netskope for inspection.

How would you achieve this scenario from a steering perspective?

- A. Use IPsec and GRE tunnels.
- B. Use explicit proxy and the Netskope Client
- C. Use DPoP and Secure Forwarder
- **D. Use reverse proxy.**

Answer: D

NEW QUESTION # 60

You are attempting to merge two Advanced Analytics reports with DLP incidents: Report A with 3000 rows and Report B with 6000 rows. Once merged, you notice that the merged report is missing a significant number of rows. What is causing this behavior?

- A. Visualizations have a system limit of 5000 rows.
- **B. Missing data is due to viewing limits.**
- C. Filters are applied differently to dimensions and measures
- D. Netskope automatically deduplicates data in merged reports.

Answer: B

Explanation:

When merging two Advanced Analytics reports in Netskope, if the merged report is missing rows, it is likely due to viewing limits within the system. Netskope's Advanced Analytics platform has limitations on the number of rows that can be viewed at once, which can result in missing data when dealing with large reports.

This viewing limit ensures performance and manageability of the data within the system.

The behavior of data viewing limits in Netskope Advanced Analytics is discussed in the Netskope Knowledge Portal, which provides insights into how data is explored and managed within the platform.

NEW QUESTION # 61

You are building an architecture plan to roll out Netskope for on-premises devices. You determine that tunnels are the best way to achieve this task due to a lack of support for explicit proxy in some instances and IPsec is the right type of tunnel to achieve the desired security and steering.

What are three valid elements that you must consider when using IPsec tunnels in this scenario? (Choose three.)

- A. the categories to be blocked
- **B. cipher support on tunnel-initiating devices**
- **C. Netskope Client behavior when on-premises**
- **D. bandwidth considerations**
- E. the impact of threat scanning performance

Answer: B,C,D

NEW QUESTION # 62

You are asked to create a customized restricted administrator role in your Netskope tenant for a newly hired employee. Which two statements are correct in this scenario? (Choose two.)

- **A. The scope of the data shown in the UI can be restricted to specific events.**
- B. All role privileges default to Read Only for all functional areas.
- C. An admin role prevents admins from downloading and viewing file content by default.
- **D. Obfuscation can be applied to all functional areas.**

Answer: A,D

NEW QUESTION # 63

You need to extract events and alerts from the Netskope Security Cloud platform and push it to a SIEM solution. What are two

supported methods to accomplish this task? (Choose two.)

- **A. Use Cloud Log Shipper.**
- **B. Use the REST API.**
- C. Use Cloud Ticket Orchestrator.
- D. Stream directly to syslog.

Answer: A,B

Explanation:

To extract events and alerts from the Netskope Security Cloud platform and integrate them with a SIEM (Security Information and Event Management) solution, you can utilize the following supported methods:

* Cloud Log Shipper (CLS):

* The Cloud Log Shipper is designed to forward Netskope logs to external systems, including SIEMs.

* It allows you to export logs in real-time or batch mode to a destination of your choice.

* By configuring CLS, you can ensure that Netskope events and alerts are sent to your SIEM for further analysis and correlation.

Reference: Netskope Documentation on Cloud Log Shipper

REST API:

The Netskope Security Cloud provides a comprehensive REST API that allows you to programmatically retrieve data, including events and alerts.

You can use the REST API to query specific logs, incidents, or other relevant information from Netskope.

By integrating with the REST API, you can extract data and push it to your SIEM solution.
