

Esri - EAEP2201 - Professional Enterprise Administration Professional 2201 Latest Exam Notes

EXAM INFORMATION GUIDE
ArcGIS Enterprise Administration Professional
2201

Exam Details:
ArcGIS Enterprise Administration Professional

- Exam Questions: 65
- Exam Type: Core
- Exam Format: Multiple Choice
- Exam Language: English
- Exam Cost: \$250 USD

Exam Purpose:
The ArcGIS Enterprise Administration Professional exam validates skills related to deploying ArcGIS Enterprise; configuring, maintaining, and troubleshooting the core components; and managing updates to services and apps. This exam will test the candidate's experience applying these skills and processes to support enterprise GIS workflows.

Target Candidate Audience:
The ArcGIS Enterprise Administration Professional exam is for candidates with experience applying ArcGIS concepts and processes to relative workflows. It is recommended candidates have at least 2 years of experience installing, configuring, and supporting ArcGIS Enterprise. Target audience is also candidates who have the following or similar roles: ArcGIS Enterprise administrators, ArcGIS consultants, System integrators, System administrators, GIS managers.

Description of Qualified Candidate:
The ArcGIS Enterprise Administration Professional exam is designed for candidates with at least two years of knowledge, understanding, and experience with ArcGIS Enterprise. It is recommended that the candidate have extensive experience implementing and administering ArcGIS Enterprise according to Esri best practices. A qualified candidate can troubleshoot common technology issues and distinguish between ArcGIS Enterprise components and supported systems issues, such as RDBMS and web servers.

Free PDF 2026 Esri Marvelous EAEP2201: Enterprise Administration Professional 2201 Latest Exam Notes

The Enterprise Administration Professional 2201 (EAEP2201) study material of TestkingPass is available in three different and easy-to-access formats. The first one is printable and portable Enterprise Administration Professional 2201 (EAEP2201) PDF format. With the PDF version, you can access the collection of actual Enterprise Administration Professional 2201 (EAEP2201) questions

with your smart devices like smartphones, tablets, and laptops.

Esri EAEP2201 exam is a rigorous certification program that requires preparation and study. Candidates are encouraged to review the exam objectives and study materials provided by Esri, as well as participate in training courses and hands-on exercises. EAEP2201 Exam consists of 90 multiple-choice questions and must be completed within 2 hours. Passing the exam requires a score of 70% or higher.

Esri Enterprise Administration Professional 2201 Sample Questions (Q11-Q16):

NEW QUESTION # 11

Multiple users report that a map service is experiencing negative performance. Upon review of ArcGIS Monitor data, the GIS analyst finds the following:

- * The minimum number of instances is 2 and the maximum is 8 for that service.
- * The data is in a publication Enterprise Geodatabase with no system usage in excess of 50%.
- * At the p75 level of requests, the map service time is 10 times longer than the service time at the p25 level.
- * The number of instances in use at the p50 level is 8.
- * The maximum % of physical memory in use is 40%, and the maximum % of virtual memory in use is 44% on the ArcGIS Server.
- * The maximum % CPU utilization observed is 53%.

What is causing the issue?

- A. The network connection between the database server and ArcGIS Server is saturated.
- **B. The maximum instance setting is too low for the demand on the underperforming map service.**
- C. The client is an Android device, and the ArcGIS Server is a Linux virtual machine.

Answer: B

Explanation:

The ArcGIS Monitor data indicates that the map service is reaching its maximum configured instances (8) at the median usage level (p50), suggesting that the service cannot scale to meet higher demand. The significant increase in service time at the p75 level further supports that the service is under-provisioned. Since system resources like CPU and memory are not fully utilized, the bottleneck is likely due to the instance configuration. Increasing the maximum number of instances would allow the service to handle more concurrent requests, improving performance.

There is no evidence of network saturation or client-specific issues affecting performance in this scenario.

NEW QUESTION # 12

An organization recently upgraded Portal for ArcGIS. The organization must reduce the number of named users to the maximum allowed by the authorization file and delete members in bulk.

Which action should the administrator perform?

- A. Batch delete users with ArcPy
- **B. Use command line utilities**
- C. Delete users using the Member tab

Answer: B

Explanation:

The most efficient and supported method for managing and removing multiple users after a Portal for ArcGIS upgrade is by using command line utilities, specifically the deleteusers utility included with Portal for ArcGIS. This tool allows administrators to batch delete user accounts by referencing a file that lists usernames. This method is especially useful when needing to quickly reduce the number of named users to comply with licensing restrictions.

Deleting users individually via the Member tab (Option B) is time-consuming and inefficient when dealing with large numbers of accounts. Using ArcPy (Option C) is not supported for managing Portal users in bulk.

Reference Source: ArcGIS Enterprise Administrator Guide - Portal for ArcGIS tools and command line utilities

NEW QUESTION # 13

A GIS administrator has a group of users who share maintenance responsibilities for a critical application. The administrator needs to allow all users to edit the application without transferring ownership. Which option should the administrator use?

- A. A shared update group
- B. A public group
- C. An administrative group
- D. A collaboration group

Answer: A

Explanation:

A shared update group allows group members to edit each other's items without needing to transfer ownership. This is ideal for collaborative editing and shared responsibility for applications, maps, or dashboards.

From Esri documentation:

"Shared update groups allow multiple members to update items shared with the group, even if they do not own the items."

- * Option B doesn't exist as a group type in ArcGIS Enterprise.
- * Option C allows viewing, but not editing others' content.
- * Option D applies to distributed collaboration, not shared editing.

Reference: ArcGIS Enterprise - Group Settings for Collaborative Management

NEW QUESTION # 14

Portal for ArcGIS is running in a Windows environment.

Which type of account is recommended to run the Portal for ArcGIS service?

- A. Built-in system account
- B. Group-managed service account
- C. Local machine administrator account
- D. Windows Active Directory domain account

Answer: B

Explanation:

Esri recommends using a Group Managed Service Account (gMSA) to run Portal for ArcGIS services in Windows environments. gMSAs automatically manage passwords, align with Active Directory policies, and are ideal for enterprise-scale deployments.

From Esri documentation:

"Using a group managed service account (gMSA) to run Portal for ArcGIS services improves security by allowing Windows to manage the password, reducing administrative overhead while meeting enterprise security requirements."

- * Option B (regular AD account) is acceptable but requires manual password updates.
- * Option C and D are not secure or scalable for enterprise environments.

Reference: ArcGIS Enterprise - Service Account Recommendations for Windows Environments

NEW QUESTION # 15

An organization must limit the users who can publish services that reference data in a user-managed database.

At the same time, all users must be able to access and edit the data in that user-managed data store.

How should the database be registered?

- A. As a relational data store in ArcGIS Data Store
- B. As an ArcGIS-managed data store in Server Manager
- C. As a data store item in the ArcGIS Enterprise portal

Answer: B

Explanation:

Registering the database as a data store item in the ArcGIS Enterprise portal allows administrators to control who can publish services referencing the data. By sharing the data store item with specific groups or individuals, administrators can restrict publishing capabilities to authorized users. At the same time, all users can be granted appropriate permissions to access and edit the data directly in the user-managed database, independent of the publishing privileges.

Registering the database as an ArcGIS-managed data store in Server Manager does not provide the same level of control over

publishing permissions. Registering it as a relational data store in ArcGIS Data Store is intended for managed data storage and does not apply to user-managed databases.

Reference Source: ArcGIS Enterprise documentation on registering user-managed data stores and controlling access.
