HP Aruba Certified Network Security Professional - HPE7-A02 Free Exam Questions

QUESTION NO: 1
A company uses HPE Aruba Networking ClearPass Policy Manager (CPPM) as a TACACS+ server to authenticate managers on its AOS-CX switches. You want to assign managers to groups on the AOS-CX switch by name. How do you configure this setting in a CPPM TACACS+ enforcement profile?

- A. Add the Shell service and set autocmd to the group name.
- B. Add the Shell service and set priv-rl to the group name.
- C. Add the Aruba-Common service and set Aruba-Admin-Role to the group name.
- D. Add the Aruba-Common service and set Aruba-Priv-Admin-User to the group name.

Hide answer/explanation Discussion 0

Correct Answer: C [Vote an answer](#)

To assign managers to groups on the AOS-CX switch by name using HPE Aruba Networking ClearPass Policy Manager (CPPM) as a TACACS+ server, you should add the Aruba service to the TACACS+ enforcement profile and set the Aruba-Admin-Role to the group name. This configuration ensures that the appropriate administrative roles are assigned to managers based on their group membership, allowing for role-based access control on the AOS-CX switches.

QUESTION NO: 2
You are using OpenSSL to obtain a certificate signed by a Certification Authority (CA). You have entered this command:
openssl req -new -out file1.pem -newkey rsa-3072 -keyout file2.pem
Enter PEM pass phrase: -----
Verifying - Enter PEM pass phrase: -----
Country Name (2 letter code) [AU]: US
State or Province Name (full name) [Some-State]: California
Locality Name (eg, city) []: Sunnyvale
Organization Name (eg, company) [Internet Widgits Pty Ltd]: example.com
Organizational Unit Name (eg, section) []: Infrastructure
Common Name (e.g. server FQDN or YOUR name) []: radius.example.com
What is one guideline for continuing to obtain a certificate?

- A. You should use a third-party tool to encrypt file2.pem before sending it and file1.pem to the CA.
- B. You should concatenate file1.pem and file2.pem into a single file, and submit that to the desired CA to sign.
- C. You should submit file1.pem, but not file2.pem, to the desired CA to sign.
- D. You should submit file2.pem, but not file1.pem, to the desired CA to sign.

Hide answer/explanation Discussion 0

Correct Answer: C [Vote an answer](#)

When using OpenSSL to obtain a certificate signed by a Certification Authority (CA), you should submit the Certificate Signing Request (CSR) file, which is file1.pem, to the CA. The CSR contains the information about the entity requesting the certificate and the public key, but not the private key, which is in file2.pem. The CA uses the information in the CSR to create and sign the certificate.
1. CSR Submission: The CSR (file1.pem) includes the public key and the entity information required by the CA to issue a certificate.

There are only key points in our HPE7-A02 Training Materials. From the experience of our former customers, you can finish practicing all the contents in our training materials within 20 to 30 hours, which is enough for you to pass the HPE7-A02 exam as well as get the related certification. That is to say, you can pass the Aruba Certified Network Security Professional Exam exam as well as getting the related certification only with the minimum of time and efforts under the guidance of our training materials. So what you are waiting for? Just come and buy them!

HP HPE7-A02 exam is conducted online and consists of 60 multiple-choice questions. The time duration of the exam is 90 minutes. HPE7-A02 exam is designed to test the candidate's ability to apply their knowledge to real-world scenarios. HPE7-A02 Exam also evaluates the candidate's ability to identify and mitigate security risks in enterprise networks.

Vce HPE7-A02 Free - HPE7-A02 Valid Dumps Ebook

Your success is guaranteed if you choose our HPE7-A02 training guide to prepare for your coming exam! The questions and answers format of our HPE7-A02 exam braindumps is rich with the most accurate information and knowledge which are collected by our professional experts who have been in this career for over ten years. What is more, our HPE7-A02 Study Guide also provides you the latest simulating exam to enhance your exam skills. So with our HPE7-A02 learning questions, your success is

guaranteed!

HP HPE7-A02 (Aruba Certified Network Security Professional) Certification Exam is a highly respected certification in the field of network security. Aruba Certified Network Security Professional Exam certification validates the skills and knowledge of professionals who design, implement, and manage secure enterprise-level networks with Aruba's security solutions. Aruba Certified Network Security Professional Exam certification exam is designed to test the ability of the candidates to secure enterprise-level network infrastructure and devices against security threats.

HP Aruba Certified Network Security Professional Exam Sample Questions (Q124-Q129):

NEW QUESTION # 124

A company has HPE Aruba Networking APs managed by HPE Aruba Networking Central. You have set up a WLAN to enforce WPA3 with 802.1X authentication.

What happens if the client fails authentication?

- A. The AP assigns the client to the WLAN's critical role.
- **B. The AP drops the client because authentication aborts.**
- C. The AP assigns the client to the WLAN's initial role.
- D. The AP assigns the client to the WLAN's default role.

Answer: B

Explanation:

When WPA3 with 802.1X authentication is enforced on an HPE Aruba Networking WLAN, the authentication process strictly adheres to security standards. Here's how the process works:

1. 802.1X Authentication Workflow in WPA3

* The client must provide valid credentials (such as certificates or username/password) to authenticate with the RADIUS server via 802.1X.

* If the client fails authentication (e.g., due to invalid credentials or lack of proper configuration), the 802.1X handshake fails, and the AP terminates the connection.

2. Role Assignment in WLANs

* **Default Role:** The role assigned to authenticated clients after a successful 802.1X authentication. It is not applied to unauthenticated clients.

* **Critical Role:** This is a fallback role applied when there are issues communicating with the RADIUS server, not when authentication fails.

* **Initial Role:** A temporary role assigned to clients before authentication completes. However, this role is removed once the authentication process determines failure.

3. Behavior Upon Authentication Failure

* In the case of an authentication failure, the client does not get assigned to any role (default, critical, or initial) because it does not meet the conditions for network access.

* The client is dropped immediately, and no further communication is allowed until reauthentication is attempted.

Explanation of Each Option

* A. The AP assigns the client to the WLAN's default role:

* **Incorrect:** The default role applies only after successful authentication, not in case of authentication failure.

* B. The AP drops the client because authentication aborts:

* **Correct:** If the client fails authentication, the AP terminates the connection without assigning any roles.

* C. The AP assigns the client to the WLAN's critical role:

* **Incorrect:** The critical role is used when the AP cannot reach the RADIUS server, not when authentication fails.

* D. The AP assigns the client to the WLAN's initial role:

* **Incorrect:** The initial role is applied during the authentication process, but it is not retained after a failed authentication.

NEW QUESTION # 125

HPE Aruba Networking ClearPass Policy Manager (CPPM) uses a service to authenticate clients. You are now adding the Endpoints Repository as an authorization source for the service, and you want to add rules to the service's policies that apply

different access levels based, in part, on a client's device category. You need to ensure that CPPM can apply the new correct access level after discovering new clients' categories.

What should you enable on the service?

- A. The Posture Compliance option in the Service tab
- **B. The Profile Endpoints option in the Service tab**
- C. The Audit End-host option in the Service tab
- D. The Use cached Roles and Posture attributes from previous sessions option in the Enforcement tab

Answer: B

Explanation:

To ensure that HPE Aruba Networking ClearPass Policy Manager (CPPM) can apply the correct access levels based on a client's device category after discovering new clients, you need to enable the "Profile Endpoints" option in the Service tab. This option allows CPPM to profile and categorize endpoints dynamically, ensuring that the appropriate access levels are applied based on the device's characteristics. Enabling this feature ensures that new devices are accurately profiled and that access policies can be enforced based on the updated device information.

Reference: Aruba ClearPass documentation and profiling guides detail the configuration and use of endpoint profiling to enhance access control and policy enforcement based on device categories.

NEW QUESTION # 126

What is a use case for the HPE Aruba Networking ClearPass OnGuard dissolvable agent?

- A. Continuously monitoring Windows domain clients for compliance
- B. Periodically scanning Linux clients for security issues
- C. Auto-remediating posture issues on clients
- **D. Implementing a one-time compliance scan**

Answer: D

Explanation:

The use case for the HPE Aruba Networking ClearPass OnGuard dissolvable agent is implementing a one-time compliance scan. The dissolvable agent is designed to perform a compliance check without requiring a permanent installation on the client device. This is ideal for environments where a quick, temporary assessment of the device's security posture is needed without the overhead of a persistent agent.

1. Dissolvable Agent: The dissolvable agent is downloaded and executed on the client device for a single session, performing the necessary compliance checks before being removed automatically.

2. One-time Compliance Scan: This method is particularly useful for guest or unmanaged devices where a temporary compliance scan is sufficient to ensure security standards are met.

3. Minimal Impact: Since the agent does not persist on the client device, it minimizes the impact on the user's system and does not require ongoing maintenance or updates.

Reference: ClearPass OnGuard documentation details the capabilities and use cases for the dissolvable agent, emphasizing its role in one-time compliance assessments.

NEW QUESTION # 127

You are establishing a cluster of HPE Aruba Networking ClearPass servers. (Assume that they are running version 6.9.).

For which type of certificate it is recommended to install a CA-signed certificate on the Subscriber before it joins the cluster?

- **A. HTTPS**
- B. RADIUS/EAP
- C. RadSec
- D. Database

Answer: A

Explanation:

When establishing a cluster of HPE Aruba Networking ClearPass servers, it is recommended to install a CA-signed certificate for HTTPS on the Subscriber before it joins the cluster. This ensures secure communication between the servers in the cluster and provides a trusted certificate for client connections.

1. HTTPS Security: A CA-signed certificate for HTTPS ensures that all web-based communication to and from the ClearPass server is encrypted and secure.
2. Cluster Communication: Secure communication between ClearPass nodes in the cluster is essential for synchronization and data integrity.
3. Client Trust: Clients accessing the ClearPass server will trust the CA-signed certificate, avoiding security warnings and ensuring smooth operations.

NEW QUESTION # 128

A company lacks visibility into the many different types of user and IoT devices deployed in its internal network, making it hard for the security team to address those devices.

Which HPE Aruba Networking solution should you recommend to resolve this issue?

- A. HPE Aruba Networking ClearPass OnBoard
- B. HPE Aruba Networking Mobility Conductor
- C. HPE Aruba Networking ClearPass Device Insight (CPDI)
- D. HPE Aruba Networking Network Analytics Engine (NAE)

Answer: C

Explanation:

For a company that lacks visibility into various types of user and IoT devices on its internal network, HPE Aruba Networking ClearPass Device Insight (CPDI) is the recommended solution. CPDI provides comprehensive visibility and profiling of all devices connected to the network. It uses machine learning and AI to identify and classify devices, offering detailed insights into their behavior and characteristics. This enhanced visibility enables the security team to effectively monitor and manage network devices, improving overall network security and compliance.

Reference: Aruba's documentation on ClearPass Device Insight outlines its capabilities in device discovery, profiling, and security posture assessment, making it ideal for environments with diverse and numerous network-connected devices.
