Appian Certified Analyst 認定 ACA-100 試験問題 (Q30-Q35):

質問 # 30

The HR management team wants to aggregate data to show the number of employees across regions and to be able to drill down into the data.

Which three user story requirements should be collected to assist the development team?

- A. Role-based permissions
- B. Data source
- C. Report type
- D. Test script
- E. Estimation of story

正解: A、B、C

解説:

Data Source (A): The first step in building any report is identifying the source of the data. Understanding where the data comes from is crucial because it affects how the data will be queried, filtered, and displayed. It also impacts performance, security, and accuracy of the data. Appian reports can pull data from various sources such as Appian databases, external databases, or even from integrations with other systems. Documenting this information allows the development team to connect the report to the correct data source, ensuring that the report reflects accurate and up-to-date information. Appian Documentation - Data Sources

Report Type (B): It is essential to define the type of report required. In this scenario, the HR management team wants an aggregate view with drill-down capabilities. The report type will determine how the data is visualized, whether it is a pie chart, bar graph, or tabular format. This user story requirement ensures that the developers design a report that meets the HR team's needs and expectations for viewing and interacting with the data. Appian Documentation - Creating Reports

Role-Based Permissions (D): Role-based permissions are critical for ensuring that users see only the data they are authorized to access. For instance, while an HR executive might have access to all regions' data, a regional manager might only see data for their specific region. Defining these permissions upfront is vital for security and compliance. The development team will use this information to implement the correct access controls in the report, which is crucial for protecting sensitive employee information. 質問 # 31

What are two benefits of creating future state process models (or process models-to-be)?

- A. They can capture high-level product vision and goals.
- B. They can help identify opportunities where Appian features can bring in automation.
- C. They capture integration definitions, showcasing necessary automation details.
- D. They capture Robotic Process Automation (RPA) intervention specifics from Appian.

正解: A、B

解説:

Creating future state process models (or process models-to-be) has several benefits, including capturing the high-level product vision and identifying areas where Appian's features can introduce automation.

Capturing High-Level Product Vision and Goals (C):

Future state process models help in visualizing the desired end state of a process.

They provide a clear picture of how the process should function once all enhancements and improvements have been implemented. This clarity aligns stakeholders around a common goal and ensures that development efforts are focused on delivering the desired outcomes.

Identifying Automation Opportunities (D):

By modeling the future state, teams can spot manual tasks and inefficiencies that could be automated using Appian's features like process modeling, smart services, and RPA.

This identification helps in streamlining processes and improving overall efficiency.

Why Not Other Options?:

A . RPA intervention specifics: While important, RPA specifics are typically captured during the detailed design phase rather than in high-level future state process models.

B . Integration definitions: These are technical details that are generally documented separately from high-level process models.

質問 # 32

Improvements are being considered for an Expense Process, and you have been asked to capture that there is now an approval task sent to the finance manager.

As part of the approval, the process should also reflect that if the payment has not been authorized within 48 hours, a reminder message is sent to the finance manager to inform them they have an outstanding task.

Which Business Process Model and Notation (BPMN) notation type would you use to illustrate the reminder message?

- A. Gateway
- B. Data object
- C. Start event
- **D. Intermediate event**

正解: D

解説:

In BPMN, an intermediate event is used to indicate events that occur between the start and end of a process. To model a reminder message that is sent if the payment is not authorized within 48 hours, an intermediate event, specifically a timer intermediate event, is the appropriate notation.

Intermediate Event Overview:

An intermediate event can be used to model actions such as delays, triggers, or messages that happen during the course of a process.

A timer intermediate event would be used to trigger the reminder after a set period (in this case, 48 hours).

Why Not Other Options?:

- A . Data Object: Represents data stored or used by the process, not an event or action.
- B . Gateway: Used for decision points or branching paths, not for triggering events.
- D . Start Event: Marks the beginning of a process and cannot be used mid-process.

Using an intermediate event ensures that the process can trigger the reminder at the right time, enhancing process automation and efficiency.

質問 # 33

You are trying to decide between using a side-by-side layout or a column layout.

Which resource should be referred to in order to make sure that best practices are followed?

- A. Appian Discussion Board
- **B. Appian UX Design Guide**
- C. Appian SAIL Recipes
- D. Appian Tutorials

正解: B

解説:

The Appian UX Design Guide is the appropriate resource to consult when making decisions about layout choices like side-by-side versus column layouts. This guide provides best practices for designing user interfaces in Appian applications, ensuring that the UI is intuitive, responsive, and consistent with Appian's design principles. Referring to the UX Design Guide helps in making informed design decisions that enhance user experience. Appian UX Design Guide Note: While other resources like Appian Tutorials, Discussion Boards, and SAIL Recipes are useful for specific cases, the UX Design Guide is the primary reference for best practices in UI design.

質問 # 34

Review this image:

AND, OR, XOR

What is this group of BPMN symbols called?

- A. Events
- B. Activities
- **C. Gateways**
- D. Flows

正解: C

解説:

In BPMN (Business Process Model and Notation), the symbols AND, OR, XOR are categorized as Gateways. Gateways control the flow of processes by determining which path to follow based on certain conditions. They are essential in managing the decision points within a process, directing the flow based on the logic defined in the process model. Appian Documentation - BPMN Gateways
