Salesforce Certified Business Analyst Exam Sample Questions (Q29-Q34):

NEW QUESTION # 29

Support managers at Cloud Kicks have received urgent feedback from staff that record pages are slow to respond and users are growing frustrated. The business analyst (BA) has been asked to evaluate to determine which pages are being accessed most frequently and which pages are the slowest to load.

What is the first step the BA should take to help resolve the issue?

- A. Confirm steps to reproduce the issue.
- B. Update page layouts in production.
- C. Create a test plan for each web browser.

Answer: A

Explanation:

Explanation

The first step that the business analyst should take to help resolve the issue is to confirm steps to reproduce the issue. Reproducing an issue means following the same steps or actions that caused the issue to occur in order to verify its existence and severity.

Reproducing an issue helps to confirm whether it is a real bug or a human error, as well as gather more information about its root cause, impact, frequency, etc. Reproducing an issue also helps to document it clearly and accurately for reporting and resolution purposes. References:

NEW QUESTION # 30

A business analyst (BA) is compiling a list of subject matter experts to consult throughout the discovery for a new Service Cloud implementation.

What is the primary value of the BA speaking with customer service reps?

- A. Estimating the project cost
- B. Building solution design consensus
- C. Validating current processes

Answer: C

Explanation:

The primary value of the business analyst (BA) speaking with customer service reps during the discovery for a new Service Cloud implementation is validating current processes. Customer service reps are the end users of Service Cloud and they can provide valuable insights into how they perform their tasks, what challenges they face, and what expectations they have from the new system.

The BA can use this information to validate or update the current process maps and identify areas for improvement. Estimating the project cost is not a value of speaking with customer service reps, as this is usually done by project managers or sponsors based on resource allocation and budget constraints. Building solution design consensus is not a value of speaking with customer service reps, as this is usually done by solution architects or developers based on technical feasibility and best practices. NEW QUESTION # 31

An executive at Cloud Kicks has tasked the internal Salesforce staff with the optimization of a very manual process in its Salesforce org. What should the business analyst do first before a future state is proposed to key stakeholders?

- A. Hold a kickoff meeting to set expectations with the project team.
- B. Manage project integrations with the technical team.
- C. Discuss project trade-offs with the executive sponsor.

Answer: A

Explanation:

The first thing that the business analyst should do before a future state is proposed to key stakeholders is to hold a kickoff meeting to set expectations with the project team. A kickoff meeting is an important step in initiating a Salesforce project, as it helps to establish the project vision, goals, scope, roles, responsibilities, communication plan, and success criteria. A kickoff meeting also helps to build rapport and trust among the project team members, as well as identify any potential risks or issues that may affect the project delivery.

NEW QUESTION # 32

Universal Containers is in the planning phase of a Salesforce project that will transform its retail locations.

The implementation team has had a difficult time determining the priorities and requirements of previous projects from people who would be directly impacted by the solution under consideration.

Which type of analysis should the business analyst recommend to ensure the implementation team avoids this challenge on the current

project?

- **A. Stakeholder analysis**
- B. Persona analysis
- C. Enterprise analysis

Answer: A

Explanation:

Explanation

The type of analysis that the BA should recommend to ensure the implementation team avoids this challenge on the current project is stakeholder analysis. Stakeholder analysis is a technique that helps to identify and understand the people who are affected by or involved in a project, and their needs, expectations, interests, influence, and attitudes towards the project. Stakeholder analysis helps to avoid missing or overlooking important stakeholders, and to plan appropriate communication and engagement strategies for each stakeholder group. The other options are either irrelevant or insufficient. Option A does not address the challenge of identifying and understanding stakeholders, but rather their behaviors and preferences. Option B does not address the challenge of identifying and understanding stakeholders, but rather their organizational context and environment. References:

NEW QUESTION # 33

The Salesforce project team at Universal Containers is reviewing a backlog of user stories to add to an sprint.

The team is unsure of which story to begin working on.

What should the business analyst do to help with prioritization?

- A. Verify acceptance criteria.
- **B. Identify dependent components.**
- C. Delete the definition of done

Answer: B

Explanation:

Explanation

The business analyst should identify dependent components to help with prioritization of user stories to add to an sprint. Dependent components are components that rely on or affect other components in an application or system. Identifying dependent components can help determine which user stories are more critical, complex, risky, or interrelated than others and prioritize them accordingly. Identifying dependent components can also help avoid conflicts, errors, or delays caused by missing or incompatible components when developing or deploying user stories. Verifying acceptance criteria is not an action that the business analyst should take to help with prioritization of user stories to add to an sprint. Verifying acceptance criteria is a process that checks whether a user story meets its conditions or requirements for being done or acceptable. Verifying acceptance criteria can help validate and test user stories but does not help prioritize them based on their importance or urgency. Deleting the definition of done is not an action that the business analyst should take to help with prioritization of user stories to add to an sprint. Deleting the definition of done is a process that removes the criteria or standards that indicate when a user story is completed and ready for deployment. Deleting the definition of done can reduce quality and consistency of user stories but does not help prioritize them based on their importance or urgency. References:
