The cruelty of the competition reflects that those who are ambitious to keep a foothold in the job market desire to get the Chrome-Enterprise-Administrator certification. As long as you spare one or two hours a day to study with our laTest Chrome-Enterprise-Administrator Quiz prep, we assure that you will have a good command of the relevant knowledge before taking the exam. What you need to do is to follow the Chrome-Enterprise-Administrator exam guide system at the pace you prefer as well as keep learning step by step.

Google Chrome-Enterprise-Administrator Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Manage Chrome Enterprise in the Cloud: This section of the exam measures skills of a Cloud Systems Administrator and focuses on preparing and configuring environments for Chrome cloud management. Candidates must demonstrate how to verify domains, use admin roles, configure organizational structures, deploy enrollment tokens, enable reporting, and maintain Chrome using the Google Admin console.

Topic 2	<ul style="list-style-type: none"> • Chrome Extensions: This section of the exam measures skills of an Endpoint Security Manager and involves managing Chrome extension policies. It includes designing extension management strategies, handling extension exemptions, creating approval workflows, and assessing extensions for their risk and compliance with business continuity requirements.
Topic 3	<ul style="list-style-type: none"> • Analyze Chrome Data: This section of the exam measures skills of a Chrome Data Analyst and focuses on using the Google Admin console to view, analyze, and troubleshoot browser data. It includes reviewing reports, diagnosing browser or update issues, investigating performance problems, and identifying security risks based on log events and Chrome activity.
Topic 4	<ul style="list-style-type: none"> • Chrome Enterprise Management Fundamentals: This section of the exam measures skills of a Chrome Device Administrator and covers the foundational elements of managing Chrome in an enterprise. It includes understanding how policies are applied and resolved, differentiating managed browsers from profiles, and describing how policies work. It also covers Chrome's built-in security features, how extensions are used and deployed, and how the release cycle and channels are managed.
Topic 5	<ul style="list-style-type: none"> • Chrome Updates: This section of the exam measures skills of a Chrome IT Policy Analyst and addresses the various update methods available for Chrome. It includes selecting the right update strategy for different business and security needs, managing compliance across platforms, and adapting update methods based on environmental changes or risks.

Exam Chrome-Enterprise-Administrator Overview, Chrome-Enterprise-Administrator Valid Dumps Free

In the present situation, you will find companies laying off their employees without any notice or prior information. They are just receiving an email and the next moment they have no access to the company network. So to avoid all this, you have to keep yourself updated with the new version of technologies and applications. You have to become one of Professional Chrome Enterprise Administrator Certification Exam (Chrome-Enterprise-Administrator) certification holders who survived the laying off situation and are still in a great position in their company. You cannot afford to lose it when you need your job the most.

Google Professional Chrome Enterprise Administrator Certification Exam Sample Questions (Q20-Q25):

NEW QUESTION # 20

A user reports having frequent issues accessing corporate pages and logging into corporate applications After looking into user reports, it is determined that other users have reported similar issues over the past few months While the broader investigation is launched to identify and resolve the root cause, which Google Admin remote actions for managed Chrome browsers can be used to help alleviate such issues for the user?

- **A. Clear Cache; Clear Cookies; Clear Cache and Cookies**
- B. Clear Cookies; Restart Browser; Logout User
- C. Clear Cache and Cookies; Delete Temporary Files; Restart User Session
- D. Clear Cache; Delete Temporary Files; Delete Swap File

Answer: A

Explanation:

Clearing the browser's cache and cookies is a common first-line troubleshooting step for issues related to website access and login problems. Outdated or corrupted cached data and cookies can often interfere with website functionality and authentication processes. The Google Admin console provides remote actions to

"Clear Cache," "Clear Cookies," or both. Options B, C, and D include actions that are either more disruptive (restart browser, logout user, restart user session) or not standard remote actions available for managed Chrome browsers through the Admin console (delete temporary files, delete swap file).

NEW QUESTION # 21

An organization is deploying 50 new devices which will be managed by a Mobile Device Management solution. Which method should be used to enroll the Chrome browser on those devices into Chrome Enterprise Core?

- A. Use Google Admin console bulk enrollment feature to generate a set of unique tokens, and then distribute them via secure file sharing platform
- **B. Use Google Admin to generate an enrollment token and distribute it using mobile device management software**
- C. Use Google Admin to generate 50 individual device registration keys and distribute them using mobile device management software
- D. Generate a single device enrollment token and email it to all users, instructing them to enroll their devices individually

Answer: B

Explanation:

The study guide emphasizes using enrollment tokens generated in the Google Admin console for enrolling browsers. When using an MDM solution, the most efficient and recommended method is to generate a single enrollment token and then deploy it to the devices through the MDM software. This allows for automated and scalable enrollment. Bulk enrollment features in the Admin console are typically for direct enrollment, not through MDM. Individual tokens or keys would be inefficient for a large deployment.

NEW QUESTION # 22

A small business wants to have all of their macOS devices enroll in Chrome Enterprise Core. They do not have a Mobile Device Management solution but do maintain a base image for their Mac computers. Where should they put the enrollment token*?

- A. /Library/Google/Chrome/Enrollment/DeviceManagementToken
- B. /etc/opt/chrome/policies/enrollment/CloudManagementEnrollmentToken
- C. HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Google\Chrome\CloudManagementEnrollmentToken
- **D. /Library/Google/Chrome/CloudManagementEnrollmentToken**

Answer: D

Explanation:

For macOS devices without MDM, the enrollment token can be embedded in the base image. The correct path for placing the cloud management enrollment token on macOS is '/Library/Google/Chrome/CloudManagementEnrollmentToken'. The other paths listed are for Windows Registry (A), a non-standard Linux path (C), and a potentially incorrect macOS path (D).

NEW QUESTION # 23

An organization has a compatibility issue with an internal website after the latest Chrome update. The decision is made to revert any updates to the working version and stop Chrome from updating beyond the working version. For security, Chrome needs to continue updating older versions to the latest compatible version. Which configuration would an administrator set?

- A. Google Updater policy precedence
- **B. Target version and rollback**
- C. Auto update check period
- D. Update to extended stable channel

Answer: B

Explanation:

To pin Chrome to a specific working version and prevent upgrades beyond it while still allowing updates within that major version for security patches, the "Target version and rollback" policy is the appropriate choice. This allows administrators to specify a target version and potentially roll back if issues arise, while still receiving critical security updates within that targeted version.

NEW QUESTION # 24

Which option is a security event that Google Chrome captures?

- A. User inactivity
- B. Unauthorized file downloads

- C. Malware detection
- D. Password complexity

Answer: C

Explanation:

Chrome's Safe Browsing feature actively scans web pages, downloads, and extensions for known malware.

When malware is detected, it is reported as a security event. While unauthorized file downloads could be a consequence of a security issue, Chrome's direct detection focuses on the malware itself. Password complexity is a setting for password management, and user inactivity is a system or application-level event, not a direct security event captured by Chrome in the same way as malware detection.

NEW QUESTION # 25
