

# MB-820 Reliable Test Prep - Valid Microsoft MB-820 New Learning Materials: Microsoft Dynamics 365 Business Central Developer

What's more, part of that Exam4Free MB-820 dumps now are free: [https://drive.google.com/open?id=1K0oKFsQNAdHO\\_v\\_DDhMdUiozXtq4hNb9](https://drive.google.com/open?id=1K0oKFsQNAdHO_v_DDhMdUiozXtq4hNb9)

The advent of our Microsoft MB-820 study guide with three versions has helped more than 98 percent of exam candidates get the certificate successfully. Rather than insulating from the requirements of the Microsoft MB-820 Real Exam, our Microsoft MB-820 practice materials closely co-related with it. And their degree of customer's satisfaction is escalating.

## Microsoft MB-820 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Develop by using AL: How to Customize the UI experience and Use AL for business central extension is discussed here. It also delves into explaining the essential development standards.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Integrate Business Central with other applications: Accessing Representational State Transfer (REST) services is discussed in this topic. It also explains implementation of APIs.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Install, develop, and deploy for Business Central: It delves into the installation and configuration of a Business Central development environment. Moreover, it discusses creating, debugging, and deploying an extension in Business Central.</li></ul>

## Marvelous MB-820 Reliable Test Prep & Passing MB-820 Exam is No More a Challenging Task

Our evaluation system for MB-820 test material is smart and very powerful. First of all, our researchers have made great efforts to ensure that the data scoring system of our MB-820 test questions can stand the test of practicality. Once you have completed your study tasks and submitted your training results, the evaluation system will begin to quickly and accurately perform statistical assessments of your marks on the MB-820 Exam Torrent. If you encounter something you do not understand, in the process of learning our MB-820 exam torrent, you can ask our staff. We provide you with 24-hour online services to help you solve the problem. Therefore we can ensure that we will provide you with efficient services.

## Microsoft Dynamics 365 Business Central Developer Sample Questions (Q18-

**Q23):**

**NEW QUESTION # 18**

You need to create the configuration table and page for the non-conformity functionality.

Which table configurations should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point

**Table design configuration**

**Requirement**  
Design pattern for the setup table

**Data type of the primary key field**

**Property required to prevent users from adding records**

**Table configuration**

Adapter  
No. Series  
Adapter  
Singleton

Code  
BigInteger  
Code  
Integer

InsertAllowed  
InitValue  
InsertAllowed  
UnBound

**Answer:**

Explanation:

**Table design configuration**

**Requirement**  
Design pattern for the setup table

**Data type of the primary key field**

**Property required to prevent users from adding records**

**Table configuration**

Adapter  
No. Series  
Adapter  
Singleton

Code  
BigInteger  
Code  
Integer

InsertAllowed  
InitValue  
InsertAllowed  
UnBound

Explanation:

Design pattern for the setup table:

\* The correct selection here is Adapter. The Adapter design pattern is commonly used when you need to handle integration points or create a setup table that acts as an intermediary for data manipulation, which fits the requirement for the configuration of the non-conformity functionality.

Data type of the primary key field:

\* The correct data type is Code. In Business Central, when creating a table with a primary key field, the Code data type is typically used for fields such as document numbers, codes, and identifiers. For a setup table, a Code field is appropriate for keys like "No." series or setup identifiers.

Property required to prevent users from adding records:

\* The correct property is InitValue. This property is used to set initial values for fields and can be configured in such a way that users are prevented from adding records directly, typically enforcing control over record creation and editing in configuration scenarios.

### NEW QUESTION # 19

How do effective tests in Business Central contribute to application development?

- A. By directly interacting with the end-user interface
- B. By increasing the number of bugs found after deployment
- C. By reducing the amount of code needed for applications
- **D. By confirming that changes in code do not break existing functionalities**

**Answer: D**

### NEW QUESTION # 20

You need to configure telemetry for the SaaS tenant and test whether the ingested signals are displayed.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Actions**

- Select the Application Insights instance, select Logs and then inspect the Traces table.
- Select the environment in the Admin Center and place the connection string in the Application Insights Connection String field.
- Create an Azure Application Insights instance by using the Azure Portal in the Partner's subscription.
- Create an Azure Application Insights instance by using the Azure Portal in the Customer's subscription.
- Select the Application Insights instance, select Events, and then inspect the Traces table.
- Select the Sessions menu and then select Restart Environment.

**Steps to configure telemetry**

- Create an Azure Application Insights instance by using the Azure Portal in the Customer's subscription.
- Select the environment in the Admin Center and place the connection string in the Application Insights Connection String field.
- Select the Application Insights instance, select Logs and then inspect the Traces table.

Microsoft

**Answer:**

Explanation:

#### Answer Area

Create an Azure Application Insights instance by using the Azure Portal in the Customer's subscription.

Select the environment in the Admin Center and place the connection string in the Application Insights Connection String field.

Select the Application Insights instance, select Logs and then inspect the Traces table.

Microsoft

- 1 - Create an Azure Application Insights instance by using the Azure Portal in the Customer's subscription.
- 2 - Select the environment in the Admin Center and place the connection string in the Application Insights Connection String field.
- 3 - Select the Application Insights instance, select Logs and then inspect the Traces table.

### NEW QUESTION # 21

A company uses four objects in development in Business Central.

The company plans to make changes to the objects.

You need to identify the application layer for each object in Visual Studio Code.

Which objects are available in each application layer? To answer, move the appropriate application layer to the correct objects. You may use each application layer once, more than once, or not at all. You may need to move the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

#### Application layers

Base
System

#### Application layers

Object  
Language table  
Activities Cue table  
Extension Management codeunit  
Business Unit Card page

#### Application layer

**Answer:**

**Explanation:**

**Explanation:**

Language table # System layer

Activities Cue table # Base layer

Extension Management codeunit # System layer

Business Unit Card page # Base layer

Application Layers in Business Central:

In Business Central, there are different layers such as Base and System, which represent different levels of the application architecture. Here's a breakdown of where each object is likely to belong based on typical Business Central architecture:

\* Language Table: This table typically belongs to the System layer, as language and localization features are often part of the foundational aspects of the system.

\* Activities Cue Table: This would likely be found in the Base layer because it involves business logic that supports user interface elements (like activity cues) specific to the Business Central application.

\* Extension Management Codeunit: The Extension Management Codeunit likely belongs to the System layer, as it deals with handling extensions, which is closely related to the core system functionality for managing and deploying changes.

\* Business Unit Card Page: This object would typically be part of the Base layer, as it is a business-specific object that handles the user interface for business unit data, part of the core Business Central application.

#### NEW QUESTION # 22

You plan to run a debug for a client.

You extend the Standard Sales - Invoice report to add a new requirement.

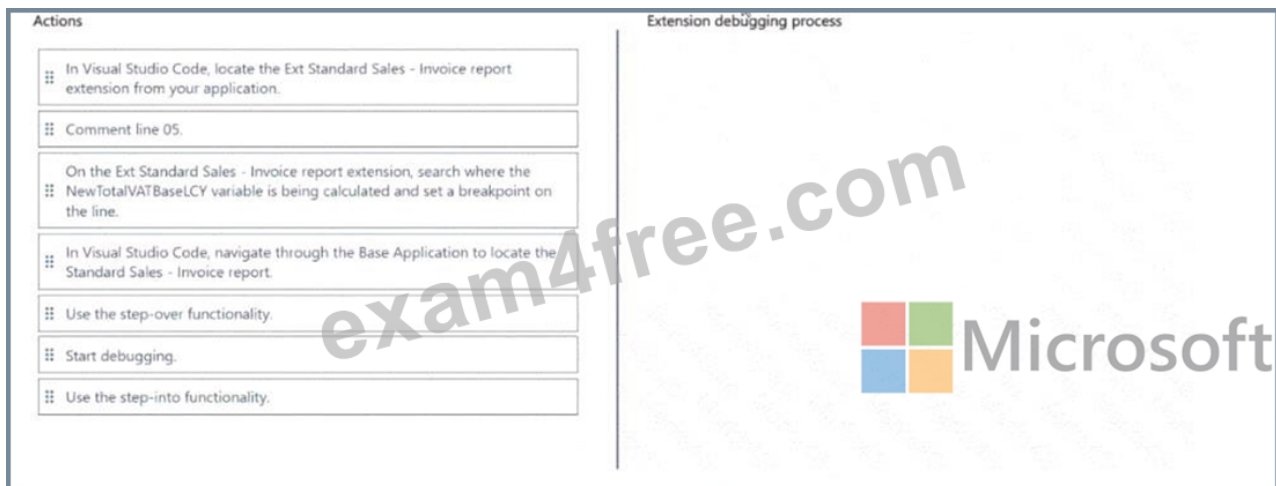

You create a Report Extension 'Ext Standard Sales - Invoice' with ID = 50100 and add the following lines of code. (Line numbers are included for reference only.)

```
01 modify(VATAmountLine)
02 {
03     trigger OnAfterAfterGetRecord()
04     begin
05         NewTotalVATBaseLCY += GetBaseLCY(Header."Posting Date", Header."Currency Code", Header."Currency Factor");
06         NewTotalVATAmountLCY += GetAmountLCY(Header."Posting Date", Header."Currency Code", Header."Currency Factor");
07     end;
08 }
```

The client informs you that the value of the New Total VATBaseLCY column is incorrect.

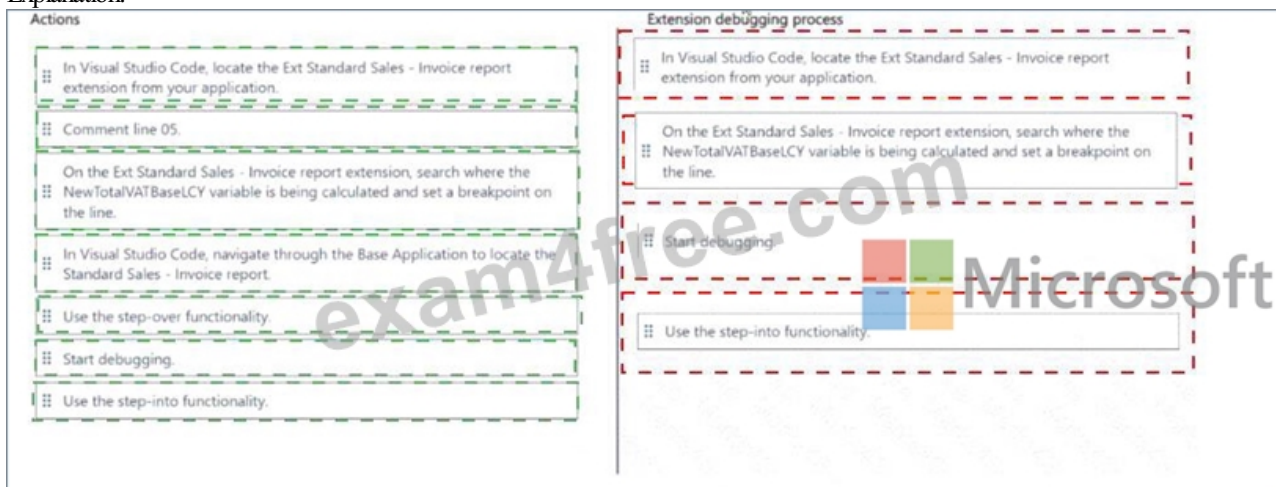

You need to run a debug to identify the cause.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Answer:**

**Explanation:**

**Explanation:**

Here's the process to follow in the correct sequence:

- \* In Visual Studio Code, locate the Ext Standard Sales - Invoice report extension from your application.
- \* The first step is to locate the specific extension you're working with so you can modify or inspect its code.
- \* Search where the NewTotalVATBaseLCY variable is being calculated and set a breakpoint on the line.
- \* To debug the issue, you need to place a breakpoint on the line where the NewTotalVATBaseLCY is calculated.
- \* Start debugging.
- \* Once the breakpoint is set, you begin the debugging process to examine the values and code execution.
- \* Use the step-over functionality.
- \* After starting the debugging, you will use the step-over functionality to move through the code line by line and observe the values of the variables.

## NEW QUESTION # 23

.....

Since inception, our company has been working on the preparation of MB-820 learning guide, and now has successfully helped tens of thousands of candidates around the world to pass the exam. As a member of the group who are about to take the MB-820 Exam, are you worried about the difficulties in preparing for the exam? Maybe this problem can be solved today, if you are willing to spend a few minutes to try our MB-820 actual exam.
