Plat-Admn-202 Top Exam Dumps - Plat-Admn-202 Latest Test Testking

For candidates who will buy Plat-Admn-202 training materials online, they may pay more attention to privacy protection. We respect your private information, and your personal identification information will be protected well if you choose us. Once the order finishes, your personal information will be concealed. In addition, Plat-Admn-202 Exam Dumps contain not only quality but also certain quantity. It will be enough for you to pass the exam. In order to build up your confidence for Plat-Admn-202 exam dumps, we are pass guarantee and money back guarantee, if you fail to pass the exam, we will give you full refund.

Salesforce Plat-Admn-202 Exam Syllabus Topics:

Topic	Details
Topic 1	• User Interface: This section of the exam measures the skills of Salesforce UI Designers and Lightning App Builders and covers the ways in which Salesforce interfaces can be customized to improve usability. It includes understanding available options for UI customization and demonstrating when to apply custom buttons, links, and actions. The domain also distinguishes between declarative and programmatic methods for incorporating Lightning components in applications, ensuring that the right approach is selected for different user interface needs.
Topic 2	• App Deployment: This section of the exam measures the skills of Release Managers and Salesforce Administrators and covers the application lifecycle from planning through deployment. It requires determining the appropriate strategy when working with different sandboxes and managing milestones during development. Candidates must know when to use change sets and how to troubleshoot deployment issues. The section also includes understanding the implications of using unmanaged versus managed packages and selecting the correct deployment plan for various business scenarios.

	• Salesforce Fundamentals: This section of the exam measures the skills of Salesforce Administrators and Junior Salesforce Consultants and covers the essential concepts needed to understand how Salesforce works at a foundational level. It focuses on recognizing when to use declarative tools versus programmatic customization, determining when AppExchange apps extend org capabilities, and understanding key methods for managing object, record, and field access. It also evaluates your ability to choose the right sharing model based on business needs and to apply reporting tools effectively, including report types and dashboards. Additionally, the domain reviews how to optimize the mobile experience through actions and layouts, and how Chatter can be used to support collaboration.
Topic 3	
Topic 4	• Business Logic and Process Automation: This section of the exam measures the skills of Process Automation Specialists and Salesforce Administrators and covers the key tools Salesforce provides to automate and enforce business logic. It focuses on using formula fields, roll-up summary fields, and validation rules to meet defined requirements. Candidates must also understand approval processes and know how to select the right automation tool to prevent conflicts or errors. The domain emphasizes evaluating business requirements and recommending automation solutions that maintain system stability and accuracy.
Topic 5	• Data Modeling and Management: This section of the exam measures the skills of Data Analysts and Salesforce Administrators and covers the core principles of designing and maintaining Salesforce data structures. It requires selecting the correct data model in various scenarios and understanding relationship types and how they influence reporting, record access, and the user interface. It also tests knowledge of field data types and the operational impact of changing them. The section includes evaluating the use of Schema Builder and understanding the considerations involved in importing and exporting data across internal and external sources.

Plat-Admn-202 Latest Test Testking - Plat-Admn-202 Accurate Answers

Our company has established a long-term partnership with those who have purchased our Plat-Admn-202 exam guides. We have made all efforts to update our product in order to help you deal with any change, making you confidently take part in the exam. We will inform you that the Plat-Admn-202 Study Materials should be updated and send you the latest version in a year after your payment. We will also provide some discount for your updating after a year if you are satisfied with our Plat-Admn-202 exam prepare.

Salesforce Certified Platform App Builder Sample Questions (Q276-Q281):

NEW QUESTION # 276
Universal Containers wants to streamline its data capture process by linking fields together. They wish to do this so that the available value on dependents fields are driven by value selected on controlling fields. Which consideration supports the stated requirements?
Choose 3 answers

- A. Checkbox fields can be controlling fields but not dependent fields
- B. Custom picklist field can be either controlling or dependent field
- C. Multi select picklist can be dependent picklist but not controlling fields
- D. Standard and custom picklist fields can be dependent fields.
- E. The import wizard only allows value to be imported into a dependent picklist if they match the appropriate controlling field

Answer: A,B,E

Explanation:
The import wizard only allows values to be imported into a dependent picklist if they match the appropriate controlling field. This ensures data integrity and prevents invalid values from being imported. Custom picklist fields can be either controlling or dependent fields. This allows the app builder to create custom dependencies between custom picklists. Checkbox fields can be controlling fields but not dependent fields. This allows the app builder to create dependencies based on checkbox values, such as true or false. Multi-select picklist fields can be dependent picklist fields but not controlling fields. This allows the app builder to create dependencies based on multiple values selected in a multi-select picklist field. Standard and custom picklist fields can be dependent fields, but not all standard picklist fields can be controlling fields. Some standard picklist fields, such as Lead Status or Opportunity Stage, cannot

be controlling fields because they are used in other processes, such as lead conversion or sales path

NEW QUESTION # 277

Universal Containers uses a private sharing model for opportunities. This model CANNOT be changed due to a regional structure A new sales operations team has been created. This team needs to perform analysis on Opportunity data, all should have read arid write access to all Opportunities.

What are two recommended solutions for the app builder to give the users appropriate access? Choose 2 answers

- A. Add a manual share for all opportunities with each user on the sales operations team.
- B. Add a permission set with 'View All' and 'Modify All' opportunity permissions enabled.
- C. Create a criteria-based sharing rule to share all opportunities with the sales operations private group
- D. Create a criteria-based sharing rule to all opportunities with the sales operations public group.

Answer: B,D

Explanation:
The two recommended solutions for the app builder to give the users appropriate access are creating a criteria based sharing rule to all opportunities with the sales operations public group and adding a permission set with 'View All' and 'Modify All' opportunity permissions enabled. A criteria based sharing rule can grant read and write access to all opportunities that meet certain criteria to a specified group of users. A permission set can grant additional object-level permissions to users without changing their profiles. Option B is incorrect because adding a manual share for all opportunities with each user on the sales operations team is not scalable or maintainable. Option D is incorrect because creating a criteria-based sharing rule to share all opportunities with the sales operations private group is redundant, as private groups are used to manually share records with individual users or other groups.

NEW QUESTION # 278

A user is unable to use inline editing on a list view. A quick check verifies the user should be able to perform inline editing as they have been assigned the appropriate permissions.
Which two conditions should the app builder review?
Choose 2 answers

- A. If the list view restricts sharing for the user
- B. If the list view contains a chart created by the user
- C. If the list view selected is the recently viewed list view
- D. If the list view contains more than one record type

Answer: C,D

Explanation:
Two conditions that can prevent inline editing on a list view are if the list view selected is the recently viewed list view, or if the list view contains more than one record type. The recently viewed list view does not support inline editing, as it is not based on a single object. The list view must have a single record type to enable inline editing, as different record types may have different fields and values

NEW QUESTION # 279

SERVICE AGENTS ARE REQUIRED TO CONFIRM A USER IDENTITY BEFORE PROVIDING SUPPORT INFORMATION OVER THE PHONE. WHAT FEATURE CAN AN APP BUILDER USE TO HELP AGENTS MEET THIS REQUIREMENT?

- A. Case Validation Rules
- B. Include Surveys as a Case related list
- C. Add Path to the top of the Case layout
- D. Guided Action Flows on the record page

Answer: D

Explanation:
Guided Action Flows on the record page can help service agents meet the requirement of confirming a user identity before providing support information over the phone. Guided Action Flows are a series of screens that guide agents through a predefined process,

such as verifying user information, collecting case details, or resolving issues

NEW QUESTION # 280

Universal Containers uses a custom object called Projects. When managers assign projects they set a custom field on the project called Estimated Hours. Once set, users should be able to decrease but not increase the value How can an app builder meet this requirement?

- A. Create a validation rule that uses the PRIOR VALUE function.
- B. Create a formula default value for the custom field.
- C. Create a formula held that uses the PREVGROUPVAL function
- D. Create a validation rule that uses the ISCHANGED function

Answer: A

Explanation:
Create a validation rule that uses the PRIORVALUE function is how an app builder can meet the requirement of preventing users from increasing the value of Estimated Hours after it is set. According to the Salesforce documentation, "PRIORVALUE returns the previous value of a field." The validation rule can compare the current value and the prior value of Estimated Hours and display an error message if the current value is greater than the prior value. Creating a formula default value for the custom field, creating a formula field that uses the PREVGROUPVAL function, and creating a validation rule that uses the ISCHANGED function are not valid or correct solutions for this requirement.

NEW QUESTION # 281

......

ITdumpsfree provides Salesforce Certified Platform App Builder (Plat-Admn-202) practice tests (desktop and web-based) to its valuable customers so they get the awareness of the Salesforce Certified Platform App Builder (Plat-Admn-202) certification exam format. Likewise, Salesforce Certified Platform App Builder (Plat-Admn-202) exam preparation materials for Salesforce Certified Platform App Builder (Plat-Admn-202) exam can be downloaded instantly after you make your purchase.
