## CITM出題内容 & CITM科目対策

ローマは一日に建てられませんでした。多くの人にとって、短い時間でCITM試験に合格できることは難しいです。しかし、幸いにして、CITMの練習問題の専門会社として、弊社の最も正確な質問と回答を含むCITM試験の資料は、CITM試験対する問題を効果的に解決できます。CITM練習問題をちゃんと覚えると、CITMに合格できます。あなたはCITM練習問題を選ばれば、試験に合格できますよ！

## EXIN EPI Certified Information Technology Manager 認定 CITM 試験問題 (Q13-Q18):

### 質問 # 13

Business is changing fast, resulting in the need to formally appoint a new staff member responsible for guiding the process in a controlled manner. Which role does apply?

- A. Risk Manager
- **B. Change Manager**
- C. Business Relationship Manager
- D. Service Level Manager

正解: B

解説:

In a fast-changing business environment, a Change Manager(D) is responsible for guiding the change process in a controlled manner. According to ITIL, the Change Manager oversees the change management process, ensuring that changes to IT services or infrastructure are assessed, approved, and implemented with minimal disruption to business operations. This role is critical when rapid business changes require structured control to maintain stability and alignment with organizational goals.

\* Risk Manager (A): Focuses on identifying and mitigating risks, not directly managing change processes.

\* Service Level Manager (B): Ensures service levels meet agreed standards, focusing on service delivery rather than change control.

\* Business Relationship Manager (C):Manages relationships with business stakeholders to align IT services with needs, not specifically change processes.

The Change Manager's role, as defined in ITIL's change management framework, is essential for controlling the pace and impact of changes in a dynamic environment.

Reference:EPI CITM study guide, under Service Management, likely references ITIL's change management processes, detailing the Change Manager's responsibilities. Check sections on ITIL change management or service transition.

#### 質問 # 14

In testing the business continuity plan, senior business managers wish to compare data which is in both the main and alternative site, before participating in a full interruption test. Which type of test do they want to take place?

- A. Structured walk-through test
- B. Checklist test
- C. Parallel test
- D. Simulation test

正解: C

解説:

A parallel test(A) in business continuity planning involves running systems at both the primary and alternate sites simultaneously to compare data and ensure the alternate site can handle operations effectively. This test verifies data replication and system functionality without interrupting normal operations, aligning with the managers' desire to compare data before a full interruption test.

\* Simulation test (B):This involves simulating a disaster scenario to test response procedures without activating the alternate site, so it doesn't focus on data comparison.

\* Structured walk-through test (C):This is a tabletop exercise where team members discuss and review the plan without executing systems or comparing data.

\* Checklist test (D):This involves reviewing the business continuity plan against a checklist to ensure completeness, not comparing data between sites.

According to ISO 22301 or business continuity management frameworks, a parallel test is used to validate recovery capabilities while maintaining operations at the primary site, making it ideal for the scenario described.

Reference:EPI CITM study guide, under Business Continuity Management, likely covers business continuity testing methodologies, referencing parallel tests in the context of disaster recovery validation. Check sections on business continuity planning or testing strategies.

#### 質問 # 15

Whilst creating the budget for the project, stakeholders demand that the project manager submits a budget proposal as accurate as possible, supported by a Work/Product Breakdown Structure (WBS/PBS). What is the preferred budget estimation?

- A. Rough Order of Magnitude (ROM)
- B. Bottom-up estimate
- C. Budget estimate
- D. Analogous estimate

正解: B

解説:

For a budget proposal that must be as accurate as possible and supported by a Work Breakdown Structure (WBS) or Product Breakdown Structure (PBS), the bottom-up estimate(A) is preferred. This method involves estimating costs for each task or deliverable in the WBS/PBS, then aggregating them to calculate the total budget. According to PMBOK, bottom-up estimation leverages detailed data, ensuring high accuracy, especially when a WBS is available.

\* Rough Order of Magnitude (ROM) (B):A high-level estimate with low accuracy ( $\pm 50\%$ ), used early in projects, not suitable for detailed budgeting.

\* Analogous estimate (C):Relies on historical data from similar projects, less accurate than bottom-up when detailed WBS data exists.

\* Budget estimate (D):A general term, not a specific technique, and less precise than bottom-up.

Reference:EPI CITM study guide, under Project Management, likely references PMBOK's cost estimation techniques, emphasizing bottom-up for accurate budgeting. Refer to sections on project cost management or budgeting.

### 質問 # 16

From the list below, which activity is not considered to be an activity in the software development phase?

- A. Code writing
- B. Documenting
- C. Testing
- **D. Implementation**

正解: D

解説:

In the Software Development Life Cycle (SDLC), the development phase typically includes code writing (A), testing (B), and documenting (C) to build and verify the software. Implementation (D) is part of the deployment phase, where the software is installed and made operational in the production environment, not part of development.

Reference: EPI CITM study guide, under Application Management, likely covers SDLC phases, distinguishing development from implementation. Refer to sections on software development or application lifecycle management.

### 質問 # 17

The introduction of a security awareness program has resulted in a quick decrease in security incidents. Eight months later, security incidents are showing a sudden increase, and the blame is put on a non-functioning security awareness program. What is most likely the cause?

- A. Scope of the program is too narrow, not covering all areas of interest
- **B. Message materials are few and static, and renewal is not taking place**
- C. Insufficient budget
- D. Lack of resources for instructor-led sessions

正解: B

解説:

Security awareness programs require ongoing engagement to remain effective. If security incidents decrease initially but increase after eight months, the most likely cause is that message materials are few and static, and renewal is not taking place (C). Static content becomes outdated or ignored over time, reducing its impact. Regular updates, new campaigns, and varied delivery methods (e.g., videos, quizzes) are essential to maintain employee awareness and adapt to evolving threats, as per ISO/IEC 27001 or NIST security awareness guidelines.

\* Insufficient budget (A): While budget constraints could limit program scope, there's no evidence in the scenario to suggest this is the primary issue.

\* Scope too narrow (B): A narrow scope might limit effectiveness initially, but the initial success suggests the scope was adequate; the issue is sustaining engagement.

\* Lack of resources for instructor-led sessions (D): Instructor-led sessions are one delivery method, but the core issue is likely outdated content rather than delivery format.

Reference: EPI CITM study guide, under Information Security Management, likely discusses security awareness program maintenance, emphasizing the need for regular content updates. Refer to sections on security awareness or human factors in security.

### 質問 # 18

.....

EXIN CITM資格認定はIT技術領域に従事する人に必要があります。我々社のEXIN CITM試験練習問題はあなたに試験うま合格できるのを支援します。あなたの取得したEXIN CITM資格認定は、仕事中に核心技術知識を同僚に認可されるし、あなたの技術信頼度を増強できます。
